Mr Ness again objected, but afterwards admitted the proceeding.

Witness continued:—The goods were marked F. B., H. G. & Co. underneath Nos. 1816—1825. That is my report. When the cases were opened they were badly mildewed. I examined 4 cases. On opening the top of the cases I found that water appeared to have got through the solder into the interior. When the tin was opened I found the contents saturated with what turned out to be fresh water. I examined them a second time in Mr Beato's presence (Survey report put in.) I should say the damage was of long standing. Mr. Rickett objected to the proceedings. He came down to see what was going on.

Cross-examined by Mr Ness:—A good deal of water had got into the inside of the cases. I should say it is impossible to make a tin lined case absolutely water tight. The reason for lining with zinc is to keep out the water as much as possible. But not one out of 100 are perfectly made. These goods were externally in good order.

Mr Dickins said he admitted that the cases were delivered in avarage good order externally.

Witness continued:—My experience enables me to say positively that these goods were not damaged with salt water. My first reason for arriving at this conclusion was that the corrosion was not so thick as that caused by salt water. Salt is more corroding than other water. I should say that less salt water cannot have the same effect as more fresh water. Invariably there are some crystals on goods damaged by salt water. It is impossible to say that so much steam could find its way into the case. By the way in which goods are stored on board steamers renders it impossible. I speak from experience, not from any deep scientific knowledge. The mildew on the packing did not appear to be new. It is quite possible the damage might have been of two months standing.

To the Jury: There were two pieces of board on the top, and water must have got through the crevice between them and then penetrated through the solder of the zinc lining.

George Blakeway, sworn, deposed:—I am a British subject and a resident here. I remember examining some ladies' leather bags at Mr Beato's request. I do not remember the exact date. I drew up a report after the second survey, almost immediately. (Report shown.) That is my writing. The date is January 24th. The marks are F. B., H. G. & Co. underneath. I think I must have made two reports, one jointly with Mr. Talbot. This is my final opinion. They were damaged and in an unmarketable condition. They were damaged by salt water. I did not see Mr. Rickett at the survey. The damage must have taken place some considerable time before I saw the goods. They were well packed.

Cross-examined by Mr Ness: The object of a zinc lining is merely to afford additional precautions against damage. I saw two or three cases opened, both the wooden and the zinc parts. I examined them carefully, but did not see any cracks in the cases. I think Mr Talbot took a piece of the packing saying he would take it to Mr North to be analysed. I was certain that the damage was caused by salt water. There was no corrosion on the zinc lining, such as there is nearly always when salt water has caused damage. It could not have been salt water which damaged the bags. They would have been rotted by it. Salt water does cause corosion; fresh water only after some considerable time. The absence of blackness, the general appearance of the cases and the presence of mildew helped me to arrive at a conclusion. I believe mildew can spring up in a very short time; I cannot say to 24 hours. It was impossible that this in question could have arisen within 48 hours of the time I saw it. Had the goods been packed in a damp condition, mildew might have occurred through sweating.

To Mr Dickins:—In my opinion this damage did not arise from sweating.

To the Jury:—I did not see to the bottom of the cases, but I heard that water was found lying there.

W. H. Talbot sworn:—I am a public accountant. I was present at the time of this survey, and examined several of the cases. The wooden cases showed traces of water. The zinc lining showed also considerable traces of water. The contents were packed in paper, and the upper tier of the bags were soaking with water. One case was perfectly sound. At the time of the survey I thought the damage resulted from steam. I took three or four days to consider and came to the conclusion that there were no traces of salt water. The central tier was probably less damaged than the lower and upper. I arrived at this conclusion partly by test and partly by microscopical examination. I took part of the pasteboard boxes and bits of the zinc lining to Dr. Eldridge for chemical analysis.

To Mr Ness.—I examined a portion of the zinc lining only. I should not consider the portion examined to have been damaged by salt water. I have no doubt whatever that this damage did not occur through salt water. I do not think that it could have been salt water and yet be unable to discover traces of salt. I think such a thing is impossible. There was not the slightest taste of salt. The corrosion produced by salt water and fresh differ. I should consider that the damage occurred a long time before I saw the goods.

A. Center, sworn:—I remember seeing the contents of several of the cases in question. The were in an unmarketable condition; but I was not there as an expert. I happened to be passing at the time and looked in. I accompanied Mr North when he took part of the cases for chemical anaylsis.

Court adjourned till 2 p.m.

John North, sworn, stated:—I have had considerable experience in analysing. I remember analysing this paper and zinc lining brought me by Messrs. Abbott, Beato, Rickett and Center. I applied the usual tests. I tore up the paper and washed the bits, preserving the water afterwards, to which I applied nitrate of silver. There was not so much precipitate as would be caused by salt water. This is merely a comparative test. (Mr North here showed the comparative action of nitrate of silver upon salt, fresh and distilled water.) From those tests I came to the conclusion that it was not salt water.

Cross-examined by Mr Ness:—I detected no chloride there. I am prepared to swear it. I have always been able to detect the presence of salt in water by this test. I examined the paper case and zinc lining, both by the same test. There was no necessity for boiling.

Li Ah Keow, cautioned: I belong No. 57. I am Mr Beato's compradore. On the 8th of January I went to the *Tiptree* for these goods, but the keeper told me he was too busy and could not attend to me. The three following days were rainy. On the 13th I went but was told to return on the next day. I had to pay $2 storage, and landed the cases on the English hatoba, and put them under the shed. I opened a case and found the contents dirty. The cases were all taken on the same day, the 14th, to No. 76 godown. On that day there was no rain.

To Mr Ness: There was no snow on the 14th. The cases came on the hatoba at 2 o'clock and were put in the godown on the same day. I saw the cases on board the *Tiptree*. They were wet,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Henry Englehardt, sworn, stated:—I am Mr Beato's clerk. These goods were insured with particular average. I saw the goods after they had been landed, first on the English hatoba and then at No. 76. They were under the shed whilst on the hatoba. They were damaged. I saw they were damaged, but did not go further into the matter. The value of the goods laid down in Yokohama was $30, and the selling value $32 to $33 per doz. I know that we paid something for the storage of these goods on board the *Tiptree*, but cannot remember how much. Mr Rickett did not object to the sale of the goods. They were sold as damaged goods. (Two letters from defendant to plaintiff read.) I heard from the Chinaman that the goods had arrived, and I sent him to obtain them. When he went on board the *Tiptree* he saw they were damaged, but the keeper forced him to take them. This explains the clean Bill of Lading being in the hands of defendant.

This closed the evidence for plaintiff. Defendant had no witnesses to call.

Mr Dickins summed up the case for plaintiff, saying:—Gentlemen, it is simply your duty to decide whether this damage has been sustained through salt or fresh water. You have heard the evidence of Mr Blakeway, Mr Abbott and Mr North, all men of great experience in these matters, and their evidence is most unmistakeable. The decision you have to arrive at cannot be difficult. (Mr Dickins now cited a case to show how insufficient were the grounds upon which the defence rested.) I think it may be allowed now, that this damage *did* occur through fresh water. It has now to be shown that the damage occurred through negligence on the part of plaintiff. That they were exposed to action of the weather, to rain or snow, is quite evident from the evidence adduced. As to the question of steam—well, it is quite probable that an engineer of a steamer opened the case and let a jet of steam into it. There is no saying what the officers of such a Company as this, who deny such a paltry claim, might do. My learned friend has been afraid to bring up any witnesses, in case they might collapse under my cross-examination. Now I shall state that in answer to my position defendants utterly deny everything. They deny that they received the goods under the the terms of this Bill of Lading, then turn tail and admit that they did. The first point to be touched upon is, that the P. & O. Co. are in the position of common carriers. (Mr Dickins here cited a case from the Law Records, showing this point clearly.)

The Court then proposed that it should be left to the Jury to consider whether:—

These goods received injury from the time they were put into the hands of plaintiff till they were delivered, and if they were in good condition when put into their hands? If damaged, what caused the damage? What is the amount of the damage?

This was agreed to.

Mr Ness then said:—I ask that this case be dismissed on the ground that no evidence whatever has been adduced to-day, to prove that—

Mr Dickins objected to Mr Ness continuing, saying that he did not expect him to sum up his case then, when he acceded to the suggestion of the Court.

The Court said: The question now merely is, whether Mr. Dickins be allowed to answer to Mr Ness' argument?

After some discussion, the Court disallowed defendant's application that the case be dismissed because there is no case to go to the Jury.

Mr Ness, addressed the Jury as follows:—The question of facts brought before you are as stated by the Court, namely:—Were the goods shipped in good order? Did they receive damage whilst in plaintiff's care? What was the amount of such damage? Now, it is clear that the receipt given to the shippers only refers to the external appearance of these goods. The second question brought before you is the nature of the damage. All the evidence shows that the damage occured through fresh water. Mr. Talbot admitted that fresh water after a certain length of time took the appearance of salt. If you look at two bottles produced by Mr North you will see that the difference in the appearance of the two liquids is not so very marked. Indeed, I could scarcely see any difference between the three. Dr Eldridge was at the time applied to for an opinion which he has not been asked for to-day. This shows that his opinion must have differed from those of the witnesses brought forward. The further question of the amount of damage is a question of little moment, and I shall not touch upon it. The questions you have to consider are simply as cited by the court.

His Honour addressed the Jury saying:—You have to decide a question of some importance. There is a document produced showing that these goods were shipped in good order, but there is a clause in the Bill of Lading which says "Weight, value and contents unknown." You have to arrive at the point, were the goods damaged whilst in the care of defendant? You cannot expect to hear the evidence of anyone who saw these goods shipped. Mr. Abbot said the damage might have occurred two months before he saw them. Mr. Talbot said that it might have taken place some three weeks before, but it was difficult to arrive at a decision. The date of the Bill of Lading is the 26th October, and you may conceive that such was the day on which they were received. You have to say whether the damage was received on board. As to their condition on delivery I need not speak. You have heard the evidence of Mr. Beato and his Chinaman and others. The particular point you have to decide is, whether the goods were in good condition when shipped, or no. The most difficult point to consider is, if this damage did occur whilst the goods were in defendant's hands—did it occur through negligence on his or his colleagues part. The only one who seems to have thought the damage caused by salt water was Mr. Beato, but he changed his opinion afterwards. All the experts agreed that it was through fresh. One of the witnesses states that he concluded that the water found its way through the cracks in the wooden case, then through the solder of the tin-lining. That you must consider the value of these goods damaged. You have the evidence of Mr. Englehardt who says the selling value of these bags was $32 to $33 per dozen, and then you have the value obtained by the auctioneer. At any rate the value was under $40.

Mr Beato here stated that there was a slight error in the notes of the court. The value he mentioned was from $27 to $30, selling value.

His Honour then asked the jury to consider and give their verdict. His observations were finished.

The jury after twice retiring to consider their verdict returned the following answers to the special issues presented to them.

1.—They found that the goods in question had sustained damage between the time when they were received and the time when they were delivered by the defendants.

2.—That the damage was caused by fresh water.

3.—Because the damage happened while the goods were in the possession of the defendants, they found negligence on their part.

4.—That the goods were damaged to the extent of $1,024.

His Honour directed these findings to be recorded, and said it was now his duty to apply the law to the special verdict of the jury and deliver judgment. The Bill of Lading contained a clause exempting the defendants from liability even if such damage as that found to have been sustained arose from the negligence of their servants. This was a binding contract to which he was bound to give effect. Judgment would therefore be rendered in favour of the defendants, with the leave to the plaintiff to move to enter a verdict for himself within ten days. Judgment for the defendant, with costs.

Before H. S. Wilkinson, Esq, Acting Law Secretary.

Messrs J Cocking, J. A. Stewart, W. H. Talbot, W Black, and G. Booth, as jury.

Wednesday, November 8th, 1876.

Copeland and Copeland and Wiegand *vs.* J. W. Hall.

Mr Montague Kirkwood appeared for plaintiffs; Mr F. V. Dickins for defendant.

Mr Kirkwood stated that he had agreed with Mr Dickins that he, Mr Dickins, should open and prove his case, to which Mr Kirkwood should give a general answer.

Plaintiffs and defendant both admitted, in the first case Copeland v. Hall, the sum of $231.75, to be correct. And the amount of uncollected accounts in Mr Halls hands, $282.26 to be correct. Also in the case of Copeland and Wiegand v. Hall, $55. to be added to the credit side. All the bills mentioned had been handed over to plaintiffs on the 12th October. In the same case the amount of $25 had also to be added to the credit side. The amount admitted to have been collected, $175 and $25. It was also admitted that the amount of uncollected accounts returned was $2,367.25, subject to correction of addition. All the small items admitted, with the exception of $60.

Mr Dickins opened the case, saying:—We have here four cases amalgamated into one, though there are only two points of importance at issue. My client is a collector of accounts and general accountant. Plaintiff, Mr Copeland, is a brewer, and lately joined Mr Weigand in the same business. Mr Hall was employed sometime in 1875 to collect their accounts at the remuneration of 2½ per cent on the amounts collected. It has been said by plaintiff that by

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

client promised to pay over the money collected during the day by him in the evening. But no such arrangement was ever made. For some time Mr Copeland and Mr Wiegand carried on a sort of commercial war and were rivals in the same trade. The latter came to my client asking him to open negociations with the former in order to bring about an amalgamation of both the firms. This was finally accomplished, and my client was asked to open and establish the books of the firm, and an agreement was afterwards made that he should keep the books in order for the firm. He was also asked to collect their bills, and I shall show that not only did he remit the amounts collected by him every two or three days, but even advanced money to the firm when they were hard pressed. All this went on till September. On the 2nd of that month Mr Hall claimed some remuneration for his services in getting about the amalgamation before referred to. Mr Copeland answered by swearing at my client. This misunderstanding brought about others, and at last this action was brought. I will ask permission that copies of the accounts be attached to the pleadings already in the hands of the gentlemen of the jury, so that they may be able to follow me with some degree of accuracy.

This was permitted by the Court. Mr Kirkwood remarked that these were not the only accounts.

Mr Dickins continued:—First of all I must speak of the case of Copeland *vs.* Hall. It has been admitted that the uncollected accounts have been given over to Mr Copeland. The amounts collected have been paid over also with the exception of the amount already mentioned. In the pleadings it is said that Mr Copeland is not debtor to Mr Hall, but Mr Hall is debtor to Mr Copeland. It demands no sum whatever and is altogether vague. It does pray that certain documents be returned, and 10½ per cent per annum be added to the amount. In the 2nd paragraph of Mr Hall's answer to this petition, it says that he was to receive 2½ per cent on the sale of lands mentioned in the negociation, which he carried through. This sum was refused and any remuneration whatever denied. The rate was reduced to 1 per cent but even this was refused, and we now again claim the full per centage of 2½ per cent. We deny that any agreement was made about the collection of Mr Copeland's accounts, and it is incumbent upon the other side to prove this agreement. It is said that Mr Hall promised to use due care in the collection of these accounts, but we deny any such allegation. This per centage is the only important point at issue with regard to the case of Copeland *vs.* Hall.

I now go on to the case of Copeland and Wiegand *vs.* Hall. In the petition it is admitted that my client was employed at the remuneration of 2 per cent. per annum on all work done. It also asks for 10 per cent. on the amount of the accounts collected but not handed over by Mr Hall. The answer to this is somewhat similar to that to the other. There is an additional clause saying that my client is willing to continue the agreement arrived at between him and Messrs Copeland & Wiegand, but they without cause have dismissed him after having engaged him for the space of one year. It was simply a piece of spite in their part, as shall be shown in evidence. Now the main issue in this case is: were Copeland and Wiegand justified in dismissing my client? And a point of minor importance to the money claim is the action of Copeland and Wiegand in issuing, on the 4th of September, certain libellous placards throughout the settlement. That Mr Hall was entitled to a commission on the amounts collected by him during the time between July and September, cannot be doubted.

J. W. Hall, sworn, stated:—I am a public accountant and general agent, and plaintiff in the counter-claim in this action. I was employed in the middle of last year to collect Mr Copeland's bills. I was to receive 2½ per cent on the amount of ordinary bills collected. There was no arrangement as to the time when these proceeds should be paid over. They were paid over to him whenever he applied for them, every three or four days. I balanced the accounts regularly at the end of every month. Between July 1875 and September 1876, Mr Copeland never objected to this plan. Of the proceeds so collected nothing has been kept by me except my commission. All of the bills uncollected were returned to Mr Copeland. He several times asked me to bring about an amalgamation with Mr Wiegand. That was in October last year. I wrote a letter to Mr Wiegand and Baron Von Siebold, then Mr Wiegand's partner. (Letter read by Mr Dickins. It was written by Mr. Hall and signed by Copeland.) I wrote this letter at Mr Copeland's request. No notice was taken of it and I afterwards spoke to Mr Wiegand about it. He said he could not entertain the idea. At the end of May, this year, Mr Copeland again came to me more than once about the partnership with Mr Wiegand. He wished me to bring about this partnership. On the 3rd June he again came. I gave him all the particulars as to the brewery. These were in writing. (Produced). They were handed to me by Mr. Copeland's drayman. (Handed in) I wrote a letter to Mr Wiegand on the same day, and took it for Mr Copeland's inspection. He said it was correct, and requested me to take it to Mr Wiegand. I took it accordingly to the brewery at 68 Bluff. He asked me to leave the letter till Monday. I told Mr Copeland what I had done. He then told me to be sure to see Mr Wiegand on Monday. On Monday morning Mr Wiegand came to my office. He said the price Mr Copeland wanted was very high, and made another proposition, which he asked me to convey it to Mr Copeland.

Mr Dickins here read the letter above referred to. It contained the conditions of sale, etc. Also a letter sent by Mr Wiegand to Mr Copeland, dated the 5th June. It was written by Mr Hall at his request, and stated his demurring at the price asked.

Mr Hall continued:—I took the letter to Mr Copeland, who went into a great rage and asked me if I thought he had stolen the money with which he built the brewery, that he would sell it at such a price. He said he would sell his beer at 15 cents per gallon, just to shut Mr Wiegand up. I left Mr Copeland who seemed to think it was my fault that I had not brought about the partnership. When I left him, he was under the impression that the negociation had fallen through. I afterwards went again to Mr Wiegand, and had a conversation with him on the matter. After some time he promised to attend at my office on the next morning, and I told him I should try to get Mr Copeland to come that they might talk the matter over. On Tuesday morning both Mr Copeland and Mr Wiegand met at my office. After a good deal of talk Mr Wiegand accepted Mr Copeland's terms, and took a half share of the brewery. A memorandum was then drawn up. (Read by Mr Dickins) I then went up to Mr Wiegand's premises to settle with him what he was to do about the stock. The matter then rested until the 13th. On the 13th, 14th and 15th, my time was fully engaged in arranging the stock, etc. The new partnership commenced on the 15th. I was requested to obtain professional assistance in having the partnership drawn up. I gave all instructions by order of both Mr Copeland and Mr Wiegand. The purchase money was secured by mortgage on Mr Wiegand's half share. According to my experience a fair commission on such a transaction is 2½ per cent. I merely made this charge to cover my expenses and loss of time whilst negociating this business. I have demanded 2½ per cent. Mr Copeland has refused to pay me any remuneration whatever. (Two items of commission in the accounts shown.) These are correct. I charged 10 per cent commission on these because the accounts were so difficult to collect. Mr Copeland had promised to give me anything reasonable. I also charged 10 per cent. commission on the uncollected bills withdrawn, for the same reason. The balance on these accounts $222 17 is due to me by Mr Copeland. After the partnership was settled, I was requested by Copeland and Wiegand to open a set of books for them. I was to keep the same, make out their accounts and collect them, at a remuneration of 2½ per cent on gross returns of the business. I purchased for them books, opened them, and acted for them, as I said, up till the beginning of September. Their money was handed over to them whenever they applied for it. After the verbal agreement in June a written one was made. They wrote asking me to put in writing what I would do the business for. (Letter read) I answered that letter. They accepted those terms and I was engaged for a year. (Answer read). They answered that letter. (Read). From June till September I collected the accounts faithfully and duly. I did not hand over the money collected every night. They made no objection to my not doing so. I told Mr Copeland that it was impossible for me to do so. My collectors were out every night till six or seven o'clock, and it would be impossible for me to attend Mr Copeland every night. There was a considerable deal of trouble involved. There was no office in town to which I could send the money. Mr Copeland made no objections. He generally called for the money himself. The proceeds were paid over every two or three days. In the beginning of the month every three days. After the 13th not so often. All the monies received by me have been paid over or accounted for. The accounts were settled up at the end if every month. No objections were made to this settlement. Between June and September no objections whatever were made to the manner in which I carried on the business. Several times I advanced money to them:—to Copeland more especially. There was no delay on my part when they demanded the proceeds.

Court adjourned till 1.30 P.M.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Court reassembled.

J. W. Hall, continued:—On the morning of the 2nd September, Mr Copeland came to my office to have the accounts settled up. My accounts were in order and the money due to him was also in order. After going through the accounts with him I told him that in the course of a few days I should want money both from him and from the firm. He then told me that he would not pay the commission for bringing about the partnership. I had previously asked for it. He said that if I wanted money from him I would have to summons him for it; but he would see me —— before he gave me a cent. After using some very strong language, I told him that unless he came to me in a proper manner I should have nothing more to say to him. He then got up in a great rage and said that I should hear further from him. He left my office, and during the day I received a letter from him. (Letter read.) He requested me to hand over to him the balance of money I had and the unsettled accounts. That was on Saturday afternoon; I did not answer on that day. On Sunday morning I received another letter asking for the cash books and the money. (Read) I answered it, saying I would give his letter my attention on Monday. On Sunday afternoon I wrote to Mr Copeland that the books and money I held for him would be ready at my office on Monday morning at 9 a.m., and I should be most happy to hand over his books upon payment of my account. (Letter read.) He answered that he was not my servant and would not call upon me. (Letter read.) He asked me to call upon him at his office on the Bluff. That was on the 3rd September. On Monday I met Mr Copeland in this Consulate. He asked me to go to his brewery; but when I returned to my office I received a letter from Mr Kirkwood saying that he had been instructed to act for Mr Copeland. (Letter from Mr Kirkwood read. It was dated Tuesday, not Monday.) On Monday the circular was sent round the town. (Produced.) That is it. An advertisement was also inserted in the paper that night. It was taken out on the 5th of this month. (Circular read and handed in.) There was no necessity for them to take the collecting out of my hands. Such an advertisement as that of course does me a great deal of harm. People who did not know the circumstances of the case must have thought I had done something wrong. They assigned no reason for my dismissal. The only reason I know of was, because I had asked for a settlement of my account on the 2nd September. (Letter produced). I received that on the 5th September. (Letter read by Mr Dickins. It said that Mr Hall was requested to hand over the money he had in hand but not the books, which he was still to keep according to agreement). All correspondence was carried on by Mr Kirkwood after the 5th. I offered to give them up upon payment of my account. I authorised Mr Dickins to make an offer to Mr Kirkwood to submit my case to a third party. (Account for September produced.) The first item is, commission at the rate of 2½ per cent on the whole work done on account of the brewery—in all $138.78. In July I collected for them $496.40. In August $921.63. In September $310.00. That is the amount actually collected by me. The bills returned amounted to $2,367.00. Of the amounts for July and August, $643 were for Yedo and shipping. The item $5,551.74, represents the gross amount of proceeds from the business from the 15th June to the 1st September. This is the ledger of the firm. The beer sold in June equalled $1,050.61. In July $2,451.40. In August $1,118.45. There was also $641.50 for Yedo and shipping accounts. That shows $6,061 96 as the amount of beer sold. Of this sum about $2,367 remained in uncollected bills. There were nine and a half months to run of my agreement. The average receipts per month were about $2,000 at that time only. The average I took was $2,500 per month. And the amount of half commission on that equals $31. In all about $300. Mr Wiegand came to me saying he wanted to pay Mr Anderson $60. I did so and that explains the item in the account. That is the receipt for $60. I told Mr Copeland and he said it was quite right. The balance of the account, subject to any reduction on the half commission, is correct. Apart from the disturbance in September, I was willing and able to carry out my contract for one year.

Cross-examined by Mr Kirkwood:—I never told Mr Copeland when I would hand over the proceeds. For the first few days perhaps I handed him over the proceeds daily. I did not know that his bill-collecter had appropriated some money. I am a scriviner as you choose to call it. I charge all sorts of amounts for writing letters. I have made several charges of that nature to Mr Copeland. I composed the letter to Mr Wiegand in October. Mr Copeland gave me his ideas of what he wanted written. I made a charge for that letter, certainly. I do not remember how much. I wrote to Baron von Siebold at the same time. They were both charged as one. That charge has been paid. (Note produced.) That is my bill. (Read by Mr Kirkwood and handed in, with another bill). That is also a bill of mine. Mr Copeland was frequently in the habit of getting me to write letters for him. He asked me to bring about the business and write to Mr Copeland. Mr Copeland signed the letter and I wrote it. It was therefore a letter from Mr Copeland to Mr Wiegand. I did not expect an answer direct to myself. Mr Copeland told me no notice had been taken of the letter. I maintain that Mr Copeland asked me to bring about this business. I know he came to me just before he gave me the particulars. He told me to write a letter to Mr Wiegand, not merely to copy out these particulars. That was about 4 o'clock in the afternoon. I read it through to him. I either brought the letter to him to signed be came to my office. I saw Mr Copeland again after I wrote that letter. I told him what Mr Wiegand had said. I left the letter with Mr Wiegand and did not take it back to Mr Copeland. I did not hear Mr Copeland say that I was unauthorised to sign my own name, not did I say "there was no harm in it, any how." The letter was left with Mr Wiegand till Monday. Neither Mr Copeland nor Mr Wiegand came on the Monday to my office. They came on Tuesday between 9 and 10 o'clock. After some conversation an agreement was arrived at. They did not dictate the conditions of he sale. I did not write out any such. I only wrote a memorandum. The letter was open for their persual before they signed it. I read it to them. I cannot be sure whether they read it or not. They perfectly understood its contents. It contains the conditions as Mr Copeland gave to me in his memorandum. They requested me to obtain legal assistance in getting up the forms of partnership. I was to see what it would cost. They did not say they would only pay $150 for it. Mr Copeland told me to see what it would cost. I said it would cost $200. He said it was too much. I told him he could not get it done for less than $175. He said it was a good deal. I think he applied one Saturday and I gave him a cheque, telling him that I had not enough money in the bank to meet it till Monday. His Chinaman presented it at 10 o'clock, before I had time to pay in, so it was dishonoured. I do not remember saying that a man to whom I had lent money had not paid me back in time. (Note handed in) I believe that was written on this occasion. Mr. Copeland first disputed my claim plainly on the 2nd September. He had before said I was charging too much. In the beginning of August all the bills I had in hand were difficult to collect, and I told Mr. Copeland that I should charge more than 2½ per cent on them. He did not grumble. I did not go to the brewery. There was no answer to Mr Copeland's note of Sunday. I met him at the Consulate on Tuesday. I hold that the advertisements in the newspapers have hurt me. I do not say that I am to bring up the people who put another of the same kind in. I might do so. I might bring action against Copeland and Wiegand. I am at present an accountant. I assist Mr Dickins in his business. I collected nothing at all in June. In July $496.40. In August $921.62. In September $309 85. Altogether $1,728. I have in hand $457.35. I have receipts for $1,378.98 from Copeland and Wiegand. The amount of bills unpaid is $2,300. The amounts that Mr Copeland has collected I have no account of. I made out all the bills. There were cash sales of course, and that is the only account I can give of this balance. The only bills that Mr Copeland collects are the Yedo and shipping accounts, and they amount to $641. Messrs Copeland & Wiegand tell me that June, July and August are the worst months in the year, because the beer is usually bad then. Mr Copeland authorised me to charge the amount of $60 paid to the account of the firm.

To Mr Dickins:—In this account I make no charge of half-commission. After sending this account I consulted you as to the position of affairs. In the first account there was no charge made for half-commission on the unexpired term of the agreement. It is charged in the second. I am willing to prepare such statement as will show my accounts as they really stand with Copeland & Wiegand. I have omitted some shipping accounts. The cash sales in June were $63.86; in July $206.60. The mainder, not being cash sales, $5,400.90. I had received no remuneration for the work done when the firm withdrew their business from my hands. Mr Copeland and Mr Wiegand never said anything with regard to my management of the books. After the publication of the placard I was offered to continue the management of the books. After September 5th I insisted on a claim on account of commission, and I offered to give up the books, papers and every thing upon payment of that claim. In October last year Mr Copeland gave me instructions and asked me to draw up a letter upon these. The interviews at the end of May were introductive to Mr Copeland bringing me the particulars of his wishes with regard

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to the sale I read that letter to them myself. When the memorandum was signed by them they saw every part of it. I had no reason whatever for hiding any part of it. I spent a considerable amount of time about this matter. I only signed the letter of June 3rd in my own name. The business being entrusted to me, I wrote to Mr Wiegand. Mr Copeland and Mr Weigand saw you about this deed of partnership in my presence. They also sent you a letter telling you that I held a letter containing all particulars. I gave you all instructions in the cour-e of drawing this up. The advertisements referred to by Mr Kirkwood was in connexion with Mr W. H. Smith's estate. I had sent in my accounts to Mr Wilkin and I requested the balance, $90 to be paid. He wanted me to hand over the $18 that I had. I did not do so On these grounds the advertisement was put in. Since then Mr Wilkin has requested me to collect other accounts for the estate.

Mr Kirkwood said that he had not entered upon the question at such length and could not see any reason for this explanation being given now. It had nothing to do with the present case.

Mr Dickins read a letter from Mr Wilkin, placing in his hands many outstanding debts of the estate, and giving him 10 per cent on amounts collected.

Mr Dickins said he had no other witnesses to bring forward.

Court adjourned till Tuesday next at 10 a.m.

IN H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, November 6th, 1876.

Robert Gallop, a seaman on board the British barque *Josephine*, was charged with having assaulted Jeremiah Downing, an able seaman on board the same vessel on the 29th and 30th ultimo.

Gallop admitted having caught hold of complainant on Sunday last, but it was under provocation, for complainant, when asked to go for some bread, refused, saying there was plenty in the drawer already.

Captain Glinton said that one of the crew had come complaining to him one day last week that another had kicked his soup about his breast. Witness saw the traces.

Ordered to pay a fine of $1, with costs; in default, to be imprisoned for two weeks.

John Wood, a seaman of the same vessel was brought up on a similar charge. He was accused with having struck Frederick Knowles whilst at sea, and afterwards using abusive language to him.

Accused pleaded not guilty.

F. Knowles, sworn, stated:—I was sitting with a Frenchman in the forecastle when accused came up and said I had been asleep on my watch. He struck me several times though I denied having slept. That was during the night and in the early part of September. I came on shore on Tuesday to see the Consul, and when I returned on board and was at dinner with the rest of the crew, accused told me to stop speaking, and called me all sorts of foul names.

Accused called as witness

Henry Evans, who was sworn, and stated:—I am steward on board the *Josephine*. I heard accused charge complainant with having neglected to strike the bell at midnight, and then strike him.

Accused said witness was mistaken with regard to the hour. He admitted having struck complainant for neglecting to strike the bell.

Fined $1 and cost, or in default 48 hours' imprisonment.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General.

Messrs. J. R. MORSE and A. T. PRICHARD, *Assessors*.

Tuesday, November 7th, 1876.

The People of the United States *in re* James Grundy *vs.* Patrick O'Bryan.

Prisoner was charged with having assaulted James Grundy in the "Alhambra Saloon" on the afternoon of the 23rd October.

Prisoner pleaded not guilty.

H. Colick, sworn, stated:—I was present in the Alhambra Saloon when prisoner shot at Grundy. They had had some dispute before that. The revolver used was like the one now in court.

To prisoner:—Grundy came in for a drink and got one. You fired and hit him.

James Grundy, sworn, stated:—I have no occupation at present. I went into the Alhambra on the 23rd October, and was refused drinks by prisoner when I asked for some. He got a revolver and fired at me and I received a shot in the leg above the knee.

John Brown, sworn:—I keep the Alhambra, but did not see the shooting. I had told Gundry not to come any more because he owed me a lot of money.

Prisoner stated:—I am a fireman, and had been taken in by John Brown out of charity. I refused to give Gundry drink on the 23rd October, because he owed enough money already. He called me all sorts of bad names and I then got a revolver and shot at his legs to frighten him. I place myself on the mercy of the Court and trust that the circumstances of my case may be considered.

His Honour remarked that it would all be looked to, though people do not play with deadly weapons with impunity.

Dr. Eldridge then testified to the shot wound in prosecutor's leg. He said if it had cut the femoral artery, which was in the vicinity of the wound, it would have caused instant death. Prosecutor could not get out of hospital till Friday last.

This closed the case.

His Honour said that the Court found prisoner guilty of an assault with a deadly weapon, and though perhaps without intent to kill, yet should such unhappily have been the case he would have been tried for murder. So it was a serious affair, and the Court was determined to put down the use of deadly weapons in this place He would be lenient, and would only sentence prisoner to six months' imprisonment.

CHINESE COOLIE EMIGRATION.

In acknowledging the receipt of the last Reports issued by the Custom-house in Shanghai, we promised to give some account of the results of the Commission sent from China in 1874 to Cuba. The *Pall Mall Gazette* has lately dealt with the question in the following article, which very fairly sums up the evidence given before the Commissioners.

The report of the Commission despatched from China in 1874 to Cuba has been issued from the Custom-house press in Shanghai. The commission consisted of a Chinese official, and two of the Custom-house foreign staff—Mr. Macpherson, English, and M. Huber, French. Although the report embodies a great mass of evidence, more or less conclusive and trustworthy, it is obvious that the Commissioners were placed at a great disadvantage for eliciting the whole truth by the Spanish authorities and planters, and were allowed little freedom of access to the Chinese coolies or liberty of action. It is equally clear that the latter, in giving their evidence, were not free agents. Men with whips were watching them, and on one occasion actually drove the witnesses away with blows and kicks under the eyes of the Commissioners. Nor were they secured from punishment in the event of their evidence being adverse to their employers. No searching or exhaustive inquiry could possibly be made under such conditions. And yet the only conclusion that can be drawn from such evidence as the Commissioners were able to obtain, and the coolies, under durance and fear of consequences, ventured to give, was fatal to any defence of the Spanish authorities or colonists.

The Commissioners report that "all investigations were conducted verbally and in person by ourselves" (all being Chinese-speaking officials); and of the witnesses it is said that "the depositions and petitions show that eight-tenths of the entire number declared that they had been kidnapped or decoyed; that the mortality during the voyage, from wounds caused by blows, suicide, and sickness, proves to have exceeded 10 per cent.; and that on arrival at Havannah they were sold into slavery, a small proportion being disposed of to families and shops, but the large majority becoming the property of sugar-planters; and that the cruelty displayed, even towards those of the former class, is great, and that it assumes in the case of those of the latter proportions that are unendurable." They further report that "the labour on the plantations is shown to be excessively severe, and food to be insufficient; the hours of labour are too long, and the chastisements by rods, whips, chains, stocks, &c., productive of suffering and injury. During the past year a large number have been killed by blows, have died from the effects of wounds, and have hanged themselves, cut their throats, poisoned themselves with opium, and thrown themselves into wells and sugar caldrons. It was also possible to verify by personal inspection wounds inflicted upon others, the fractured and maimed limbs, blindness, the head full of sores, the teeth struck out, the ears mutilated, and the skin and flesh lacerated—proofs of cruelty patent to all."

If the counts of this grave indictment are not true, and cannot be substantiated by evidence, what would have been easier than

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

for the authorities and planters incriminated to bring forward counter-evidence of so unquestionable a character as to leave no doubt on the mind of any unprejudiced person? That they did not do so, while fully cognizant of all the charges made against them, but allowed the Commissioners to put forth to the world uncontradicted a report so utterly condemnatory, leaves no room for further question. They and their counterfeit system of contract labour, but too real slavery of the worst kind, have by this report been put out of count from henceforth and so long as the iniquity lasts. We do not care to go into any analysis of the queries put to the coolies and the answers received; it would be a work of supererogation. Of the 1,176 depositions taken there is not one which does not record some act of bad faith or brutality and cruelty of which the coolies were the victims. And if we multiply these by the numbers who have been kindnapped and enslaved, in violation of treaties entered into with the Chinese Government, we shall obtain some slight notion of the amount of suffering and crime for which during the last thirty years some of the principal Western States, ourselves among the number, have made themselves responsible. According to the statement prepared by the British Consul-General at Havannah, there had been imported from various ports of China and Macao into Cuba alone, independent of the thousands sent to Peru and British Guiana, 99,149 Chinese subjects, all sold to slavery, from which there is no escape but by death, as the whole of the evidence taken by the Commissioners only too plainly shows. But even this does not adequately represent the enormity of the evil in this one colony alone. By other returns it is shown that, within the period since the first treaty was signed with England in 1843 no fewer than 140,000 coolies have sailed from China, of which number more than 16,000 died during the voyage from ill-usage. As some of the depositions set forth, "when quitting Macao they were confined in the hold below, some were even shut up in bamboo cages or chained to iron posts, and a few were indiscriminately selected and flogged as a means of intimidating all others." These atrocities have been perpetrated under nearly every flag of Europe, and that for a succession of years extending over a quarter of a century. Nor have these things been done in the dark, or by a single Power unknown to the rest of the world. Year after year the existence of the wrong and the iniquity of the traffic carried on under the transparent veil of emigration have been loudly and persistently proclaimed. The Chinese Government has long and loudly protested, and made appeal after appeal to every treaty Power to put down this outrage on humanity and open violation of treaties; and China has protested and appealed in vain. The United States alone, and to her lasting credit, strictly prohibited, after the first exposure of its atrocious character, her ships to receive coolies under contract, and made it piracy under her laws to transport them to their destination—an example which we have only partially and imperfectly followed.

Ten years ago the British and French Ministers at Peking were authorized by their respective Governments to enter into a convention for the suppression of the more flagrant abuses of the traffic. It so happened that the two Ministers were equally anxious with the Chinese "Tsung-li Yamén" to provide a corrective, and vindicate the law. Such a convention, after careful consideration, was duly signed, but the main provision on which hinged all the efficacy of the protection devised for the coolie—a return passage to be provided, and the limitation of five years for the term of service—was objected to by the planters and colonists of both the nationalities, who had hitherto profited by these shipments of cheap labour unfettered by any such protective enactments; and the result was the non-ratification of the convention. These abortive negotiations, however, had one good effect—they practically stopped the coolie trade. For although various attempts were made on the part of different Powers—England and France included—to assert a right to continue shipment under regulations which had covered all the abuses, the Chinese authorities for once succeeded in battling the crimps and shippers, and maintained their right to protect their subjects from slavery. The indignation of the Chinese Government was very plainly expressed when the convention was rejected, and the untoward influence exercised on all subsequent relations of China with foreign Powers—Great Britain and France more especially—not only as regarded the revision of treaties, but all other questions of reciprocal rights, has been serious, however discreetly veiled from public notice by official and diplomatic reserve. How, indeed, could it be otherwise, when it was known that in the convention between Great Britain and France for the emigration of labourers from India to the colony of Réunion, signed at Paris July 25, 1860, it is provided in Art. VIII. that the contracts shall make stipulation of "the duration of the engagement, at the expiration of which the emigrant shall receive a return passage to India at the expense of the French Government, and the terms on which it shall be competent to him to renounce his right to a free passage"? In Art. IX. it is stipulated that "the duration of the immigrant's engagement shall not be more than five years," the emigrant retaining his right at the end of a second engagement, if of his free choice he entered into another—a right extending to his wife and all his children who quitted India under the age of ten years, as well as those born in the colony. In a second convention, signed in the subsequent year, this provision is reaffirmed, with the same stipulation; and in a later convention with Holland signed at the Hague in 1870, precisely the same stipulation is insisted upon. But what Great Britain thought essential for the protection of its Indian subjects emigrating under labour contracts to the French and Dutch colonies, and the French and Dutch Governments accepted as a reasonable and equitable protection, was deemed by both Governments quite unnecessary for the protection of Chinese coolies in Peru or Havannah.

THE CHRISTIAN DOCTRINE OF SIN.*

(The Spectator)

It is a truism to say that there is nothing so interesting as religious discussion, and yet it is, at the same time, a paradox, for there is nothing which has been, and often is, so great a weariness to the flesh. Sermons are, by their very name, a bugbear to a great portion, and often the most cultivated portion, of society. We grumble at our weekly share of them, we resent the imposition of an additional five minutes as a grievous personal wrong. There is nothing which we are so anxious to cut short or slip out of by any pretext, and yet strange contradiction, not even the successful player, whose aim is our amusement, has half so great a hold on us as the preacher, when one happens to come in our way. The art, if we may call it by that name, suffers not from any fault of its own, but from the unspeakable incapacity of the mass of its practitioners. A true Preacher, a man endowed with the real faculty of religious exposition or exhortation, wherever he finds himself, will find an interested audience. Stupidity, wrong-headedness, dull folly, clever levity, every intellectual sin which belongs to man, have done their best to blunt the tools of the religious orator, and take his powers from him, but they have been unsuccessful. The fury or the stupor into which we are lashed or lulled every Sunday by our own individual local tormentor floats away like a cloud, whenever the real possessor of the gift makes his longed-for appearance. The sermon is the embodiment of everything that is most wearisome and tedious: the sermon is the most highly appreciated of human productions. No two things can be more contradictory or more true.

It is scarcely necessary to say that Principal Tulloch's last volume belongs to the latter class; but allowing this to the fullest extent, and granting, what is unquestionably the case, that Principal Tulloch himself is one of the few to whom the gift of preaching has come by nature, it still remains a matter of admiration and wonder that the volume before us, which is no light collection of those popular sermons which are as the blossoms of the theological tree, but rather a close and philosophical statement of a very serious development of doctrine, should have collected crowds to hear the discourses of which it is composed, and held an ordinary audience entranced. The doctrine cannot be called a popular one. Had it been human virtue and valour which were to be expounded and celebrated, one can imagine many lesser motives attracting the crowd; but sin is not popular, as in those sterner days when, whether it could be overcome or not, the ordinary public had a pleasure in acknowledging its enormity, inquiring into its ineradicable and universal nature, and settling its punishment with all the zest of abstract justiciars unassailable in their own persons. But it is a very high testimonial to the intellectual qualities of the inhabitants of Edinburgh that one of their largest churches was crowded night after night, all standing as well as sitting room overthronged with eager listeners, to follow an argument which requires at once close listening and close thinking; and fond as we are of attributing religious doubt and scepticism to our own age, this is one of the most curious proofs to the contrary that could

* *The Croall Lectures, 1876: the Christian Doctrine of Sin.* By John Tulloch, D.D., Principal of St. Mary's College, in the University of St. Andrews. Edinburgh and London: Blackwood.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

well be adduced. Principal Tulloch's theological character is not of the kind which gives much satisfaction to the extreme party on either side. He excites the ancient disciples of orthodoxy to unedifying wrath, and he drives the intellectual unbeliever into, if possible, a still wilder fury. This is no bad testimony to a religious thinker, and the fact that he has gathered together almost the largest audience attainable in a town so well educated and intellectually active as Edinburgh, to trace the serious growth of a tenet which is fundamental to every kind of religion, shows not only his own acknowledged power, but the interest which such subjects can still command, when treated as they ought to be treated. The lectures in question lie under the disadvantage of combining the gravest of topics with the most general of audiences. Addressing himself to that which is most unlike a University class, *i.e.*, a section of ordinary society, learned and unlearned, great and small, men and women, the lecturer had to interest minds unaccustomed to any strain of attention, as well as to instruct some of the clearest and keenest intellects of the world; and he managed to do so; and to the credit of both speaker and hearers, no better thing could be said.

The difficulty of uniting the ease of popular style with the solid, scientific treatment demanded by such a subject must have been great, but we think the reader will acknowledge that the success has been worth the effort. The work is at once grave and graceful, full of flashes of that devout and vivid apprehension of divine and spiritual things without which no preacher can ever reach the heart, while at the same time retaining a steady hold upon the argument which is the speaker's chief object. That it is candid, tolerant, and full of that special intelligence and understanding of the vagaries of thought which is almost entirely a modern attribute, no one will need to be told who knows the author's reputation and previous works. The opening lecture, which discusses the attitude of contemporary thought in respect to this, as to most other branches of the Christian faith, pointing out the one fundamental divergence which makes all reunion impossible, is especially interesting. On this introductory ground, the question is simple, at least, and deals with primary principles. Here is no difference of special believings, but a disruption so complete that no concessions on either side can bring together those opposite poles of thought. The whole question between the believer and the unbeliever, as Principal Tulloch ably shows, is centred in the fundamental idea of Man, as of the earth, earthy, or as heaven born, and made in the image of God. According as men hold the one or the other theory, so all the rest must follow,—on one hand, moral responsibility, moral aspirations, Sin; and Righteousness, on the other, a merely material being, more or less happily conditioned, the heir of no lofty past, the expectant of no future, and answerable to no power higher than himself. The consequences of these different starting points of theory are ably set forth as follows:—

"The antithesis is not less marked in philosophy. From the earliest dawn of speculation two sides everywhere appear, contrasted by their starting point, not less than by their results. It is the conception of man as being not only mundane, but supra-mundane, as drawing his higher life from a higher source, which has alone given rise to a higher philosophy, or a philosophy of Being. The conception of man as merely a consensus of external faculties has never risen above a philosophy of the senses; nor could it be otherwise. Thought cannot, any more than water, rise higher than its source. And the thought that is solely earth born, or the inheritance of mundane experiences, and nothing more, however subtilised or aspiring, can never bring any light from beyond its earthly home. We must start from a higher home, from a 'heaven lying about us in our infancy,' if we would ever reach a spiritual and higher line of thought at all. We cannot climb into an empty heaven. If we are not born with the 'promise and potency of the divine,' the 'image of God' within us, then we shall never reach the divine, earnestly as we may grope for it, and cast forth our loftiest thoughts to grasp it. The present turn of speculation once more strikingly illustrates the interdependence of thought on these great subjects. The favourite conceptions of modern science involve, if they do not start from, a definite view of human nature at variance with the old Biblical or spiritual view. Man is conceived as developed from lower forms of life by lengthened processes of natural selection. There is nothing necessarily inconsistent with an enlightened Christianity in this idea, so far. The divine mind may work out its plans by processes of growth or adaptation as readily as by any other way. Nay, as it has been recently admitted by one of the most distinguished advocates of the modern idea, the teleological conception, or the conception of design, is prominently suggested rather than excluded by the theory of development as a mere *modus operandi*. But beyond question, the chief advocates of this theory mean something very different. Nature is supposed by them to be not merely the sphere of operation, but the operating power itself, beyond which there is nothing. Man is not merely, like all other things, a natural growth, but he is nothing else. There is no higher divine element in him; material facts and their relations or laws are all that we can ever know. It is this underlying sense of the theory which is at variance with the old Biblical view of human nature. It leaves, for example, no room for the idea of sin. For that which is solely a growth of nature cannot contain anything that is at variance with its own higher laws. It may show more or less perfect stages of growth, but it cannot contradict itself. If the individual and social alike are merely the outcome of natural forces working endlessly forward towards higher and more complex forms, then, whatever man is, he is not and cannot be a sinner. . . . . I cannot be the mere outcome of natural law, and yet accountable for the fact that I am no better than I am. If I am only a child of nature, I must be entitled to the privileges of nature. If I have come from matter alone, then I cannot dwell within the shadow of a responsibility whose birthplace is elsewhere,—in a different region altogether. And so the spirit of modern science is consistently non-Christian. A man who is nothing more than an aggregate of natural powers can have no true vision transcending the range of those powers. The Unseen, or a law coming forth from the Unseen to rule his spirit, must be a mere superstition to him; and sin, as the violation of such a law, a mere gloomy phantom, to be got rid of the best way he can."

"The conclusion on one side and the other is everywhere involved in the original terms of the question," Principal Tulloch adds. "All depends upon the presupposition as to what man is with which they set out." Thus Professor Huxley's famous outburst of enthusiasm over his piece of chalk, the history of which he declared to be as important and instructive to man as all the histories and developments which had taken place on the earth's surface, contains (on what may be called the silly side) the germ of the whole matter, as well as the most solemn discussion of the origin of man could do. For there will always be a great proportion of mankind who would not give the story of a certain mad and miserable old king, who once fought wildly with the storm close by those chalk cliffs at Dover, for all the records of all the volcanoes that ever boiled or bubbled. Few investigators, however, would like to be so bold as to match a big boulder against King Lear—in words, at least—whatever they might say for the human soul. We cannot follow Principal Tulloch through the primeval indications of something amiss in the world, an uneasy consciousness which suggested evil and harm, if not the finer discrimination of something which was guilt; but at the risk of exceeding our space, we must endeavour to quote from another passage, in which he describes with touching force and eloquence the idea of man as expounded by Christ:—

"While man is everywhere a sinner before him who was himself 'holy, harmless, undefiled,' yet he is nowhere represented as nothing but a sinner. 'There is no man that doeth good and sinneth not' in the Gospels, any more than elsewhere in Scripture. But the Gospels are singularly free from those exaggerated colours in which a later theology has sometimes drawn human nature. Man is a fallen and degraded being. He is at the best, be he Pharisee or Publican, among the 'lost' whom Christ came to seek and to save. But he is noble, even in his degradation. There is a capacity of divine life in him beneath all the ruin of his nature. He is godlike, even with the image of his divine original broken and defaced. . . . . The very misery of man, as Pascal says, interpreting this aspect of our Lord's teaching, attests his true greatness. He is a king dethroned, but still a king. The crown has fallen from his head. . . . . but there is the faint lustre of it still on his brow, and the dignity of having once worn it still lives in his heart. There is nothing more characteristic of our Lord's teaching than this recognition of the divine original of humanity, and of the divine potency which still survives in it. This is the only key to his redemptive mission. He came to recover the fallen, and to set up that which had been thrown down. He saw what was in man more truly than all others. . . . . The cry of the returning prodigal was heard by him a far way off; and even while he eat of husks and grovelled with the swine, the thought of his divine home had not died out of him, and the capacity for return had not absolutely perished."

Once more, how strange is the paradox, but how certain! The fallen man who came from Eden, how much loftier is he, in his downfall and wretchedness, how much finer as a type of being, than he without the soul or the sins, who most probably is only an automaton, and who was developed out of mud and pregnant slime, and nothing more!

The following (according to the Paris correspondent of the *Daily News*) is the substance of the message which Marshal Manteuffel gave to the Emperor Alexander at Warsaw. The Emperor can never forget Russian neutrality in 1870. He will not oppose the attempts of Alexander II. to group the Slav provinces into a single independent State, but would resolutely combat any annexation to Russia, or the entrance of a Russian war ship into the Sea of Marmora.—*Pall Mall Gazette.*

The correspondent of the *Daily News* at Alexandria says it is again currently rumoured that Massowah has been captured by the Abyssinian army, and also that two Egyptian steamers have been seized.—*Pall Mall Gazette.*

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Our market continues very quiet, and prices are all more or less nominal.

Grey Shirtings:—						
7 lbs.	38½ yds	39 in.	per pce.	...	$1 60 to $2.10	
8 lbs.	38½ yds.	44 in.	,,	...	2 00 to 2 50	
8 lbs. 4 to 8 lbs.	38½ ,,	39 in.	,,	...	1 80 to 2 50	
9 lbs	38½ ,,	44 in.	,,	...	2 40 to 2 85	
T. Cloth 7lbs.	24 ,,	32 in.	,,	...	1 45 to 1 70	
,, 6lbs.	24 ,,	32 in.	,,	...	1 20 to 1 30	

White Shirtings:—						
60 to 64 reed	40 yds.	35 in.	per pce.	...	...	2.20 to 2.40
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb.	...		0.77½ to 0.97½
Black Velvets	...	...	...	...	...	8.25 to 9.25
English Drills	15 lbs.	40 yds,	30 in.	...	...	2.70 to 2.90
Taffachelass	12 yds,	43 in.	...	...	...	2.00 to 2.40

Yarns.—

No. 16 to 24	per picul..	$36.50 to 34.00	
No. 28 to 32	per picul..	$31.00 to 38.50	
No. 38 to 42	per picul...	$39.00 to 42.00	
Reverse Twist ... ... 16-24 ...	,,	...$33.00	

Woollens.—The market for this staple is very quiet and prices generally are weak, there being only a small demand for *Mousseline de Laines* at a slight decline of quotations.

Plain Orleans	40—42 yds	32 in.	...	5 55 to 7.00	
Figured Orleans	29—30 yds.	31 in.	...	4 25 to 5.75	
Shimagoro	30 yds.	30 in.	..	4.50 to 5.50	
Italian Cloth	—30 yds	32 in.	...	0 25 to 0 37½	
Camlet Cords	29—30 yds	32 in.	...	5 75 to 6.00	
Camlets Asstd.	56—58 yds.	31 in.	...	16 50 to 17.50	
Lastings, Japan	22—30 yds.	32 in.	...	12.00 to 13.00	
Plain Mousseline de Laine	—30 yds	30 in	...	0 18½ to 0.19½	

Figured Mousseline de Laine	...30 yds.	30 in...		0.27 to 0.32	
Multicolored ,,	...30 yds.	30 in...		0 30 to 0.40	
Cloth, all wool plain or fancy	.. 48 in. to 52 in...			0.80 to 1.20	
Presidents	...54 in. to 56 in...			0.75 to 0.80	
Pilots	...54 in. to 56 in...			0.45 to 0.60	
Union	...54 in. to 56 in...			0.60 to 0.75	
Blankets, scarlet & green	6 to 8 lbs....	per lb...		0.42 to 0.48	

Sugar.—*Formosa* kinds have still further advanced, while *China Sugars* have generally declined. There has been only a small enquiry for both sorts, and holders are hoping for further advances all round.

Sugar:—Takao in bag	per picul .	$4.05	
,, in basket	,, ..	$3 75	
Taiwanfoo in bag...	,, ..	$3 85	
do. in basket...	,, ..	$3.55	
China No 1 Ping-fah	,, ..	$7 70	
,, No. 2 Ching-pak	,,	...$6.80	
,, No. 3 Ke-pak	,, ..	$6.10	

China No. 4 Kook-fah	...per picul...	$5.50	
,, No. 5 Kong-fun	,,	...$5.00	
,, No. 6 E-pak	,,	...$4.20	
Swatow	,,	...$3.80	
Daitong	,,	...$3.50	
Japan Rice		$2.30 to $2.35	
Kerosene Oil	,,	...$3.60	

Kerosene Oil.—The market remains without change, at $3.80 to 3.90 per case.

EXPORTS.

Silk.—Since the 24th ultimo arrivals are 1,650 bales, and settlements about 1,000, leaving a stock of 3,000 bales.

The advices received from home in the course of the past week have been such as to impart more activity to transactions, which, however, continue much hampered by the difficulty of negotiating Bills, and the market closes firm at the following quotations.

	At Exchange 4/3 in London.	At Exchange 5.35 at 6 m.s. in Lyons.	
Hanks.—Extra to No.			
,, Best No. 1 & 2	$830 to 860	30 11 to 32 1	86 to 88
,, Good No. 2	$800 to 820	29 10 to 30 7	83 to 85
,, Medium No. 2½	$750 to 780	28 1 to 29 2	78 to 81
,, C'mon. No. 3...	$680 to 720	25 7 to 27 0	71 to 75
,, Inferior No 4 & 5	650	24 7	68

	At Exchange 4/3 in London.	At Exchange 5.35 at 6 m.s. in Lyons.	
Oshiu—Best	$820 to 860	30 7 to 32 1	85 to 88
,, Medium to Good ..	$780 to 810	29 2 to 30 3	81 to 84
Hamatski—No. 1 & 2	$650 to 700	24 7 to 26 4	68 to 73
Kakeda.—Best	$900 to 930	33 6 to 34 6	93 to 96
,, Medium to Good. .	$850 to 880	31 8 to 32 9	88 to 90

Filatures are in good demand and selling at from $900 to $1,000, say 33 6 to 37', or fr. 93 to 102.

Silk-worms' Eggs.—Total arrivals since the beginning of the season are 1,120,000 cards, and total shipments to date 165,000 cards.

We quote:—

Annual Green, Oshiu Daté	...	$2.25	to	$3.00	
,, ,, ,, Dewa and others	...	$1.75	to	$2.50	
,, ,, Joshiu Shimamura	...	$2.75	to	$3.25	
,, ,, ,, others...	...	$1.75	to	$2.75	
,, ,, Sinshiu	...	$1.75	to	$2.25	
,, ,, Bushiu	...	$1.50	to	$2.50	
,, ,, Other sorts	...	$1.00	to	$1.50	
Annual White	...	$1.50	to	$2.50	

The business, however, done at the above quotations is very limited. There has been much talk about an arrangement proposed to the native dealers by certain Japanese merchants and bankers, with the object of maintaining prices. That arrangement has now been made public, and a careful perusal of it leaves no doubt that very few dealers will be foolish enough to accede to its terms. There is, accordingly, an increasing probability that prices must fall considerably before the end of this month.

Tea.—At the opening of the current week prices showed a decided downward tendency, and little or nothing was done until during the last two days, when a moderate demand sprang up for desirable parcels of *Good Medium* to *Fine* grades, which brought the settlements for the week to 2,700 piculs. Prices in consequence remain much as last reported, but holders are slightly firmer in their demands.

Common	...$12.00 to 14.00		
Good Common	... 15.00 to 17.00		
Medium	... 18.00 to 20.00		
Good Medium	... 22.00 to 25.00		
Fine	...$27.00 to 33.00		
Finest	... 34.00 to 39.00		
Choice	... 43.00 to 48.00		
			[scarce.

EXCHANGE AND BULLION.

Exchange.—Early in the week, with a fair business doing in Private Paper, sterling rates showed signs of advancing and touched 4 2½ for Credits, but at the close they are again weak at quotations, and that, too, with scarcely any demand for Bank Bills.

Rates close as follows:—

STERLING—Bank 6 months' sight.....	...4s. 1½d.		
,, Bank Bills on demand..... ..	4s. 0½d.		
,, Private 6 months' sight.....	4s. 1⅝d.		
ON PARIS—Bank Sight	...5.05		
,, Bank 6 months' sight	5.15		
,, Private 6 ms. sight.....	5.25		
ON HONGKONG—Bank sight.....	... 2 % dis.		
,, Private 10 days' sight.....	...2½ ,,	noml.	

ON SHANGHAI—Bank sight	...77	
,, Private 10 days sight.....	...78	
ON New York—Bank Bills on demand.....	96½	
,, 30 days sight Private.....	...99	
ON San Francisco—Bank Bills on demand.....	97	
,, 30 days sight Private.....	99½	
Kinsatz	...393	
Gold Yen	...392

NOTICE TO MARINERS.

NO. 63.

China Sea.

TAMSUI DISTRICT.

Coral Patch off the Entrance to Keelung Harbour.

THE following information has been received from Vice-Admiral A. P. RYDER, Commander-in-Chief, China Station.

"H. M. S. *AUDACIOUS* when leaving Keelung Harbour, Formosa, in May last struck on a CORAL PATCH, unmarked in the Charts. The position of this patch has since been determined by H. M. S. *LAPWING*, and is as follows:—

100 Foot Rock (Keelung Island)...S. 74° E.
Macedonian Point .....S. 3° E.
Brooker Point.....S. 27° W.

This patch is about 150 to 200 yards in extent with least water 3½ fathoms (reduced to low ordinary springs), soundings varying from 5 to 9 fathoms on the patch.

The bearings given show the exact position of the 3½ fathoms patch.

By order of the Inspector-General of Customs.

(Signed) DAVID M. HENDERSON,
Engineer-in-Chief.

THE

CELESTIAL EMPIRE.

A Weekly Record of Commerce, Politics, Literature and Science.

THE wide scope of this periodical, embracing, as it does, information of the most varied nature on matters connected with China and the Chinese—their language, literature, customs and politics; local and foreign intelligence; a complete compendium of all the commercial news of the week, with the well-known Shanghai Statistics of Imports, and Export-tables of Produce; and summarising the literary gossing of every European mail, upon its arrival, from the best of the London and New York Papers—renders it peculiarly adapted alike for circulation at the Out-Ports and in Japan, and for transmission to one's friends at Home.

ITS LARGE CIRCULATION AT
THE OUTPORTS
RENDERS IT AN EXCELLENT MEDIUM FOR

ADVERTISEMENTS.

Subscription, Twelve Dollars per Annum.

THE SUBSCRIPTION FOR
"SHANGHAI COURIER AND CHINA GAZETTE"
IS NOW REDUCED
TO
Twenty Dollars per Annum,
WHICH MAKES IT THE CHEAPEST DAILY PAPER IN CHINA
AND
its increasing circulation renders its particularly well adapted for
ADVERTISEMENTS,
which are inserted on very reasonable terms.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

March 4, 1876. 1-f. 13 ins.

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

NORTON'S PILLS

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,
To the Proprietors of L. S.

NORTONS' CAMOMILE PILLS, London.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 47.] YOKOHAMA, SATURDAY, NOVEMBER 18, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which must result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The native Press has discussed the late insurrection this week with much seriousness and, in some cases, to excellent purpose. The *Nichi Nichi Shimbun* of the 15th has an article, which has reached us too late for insertion in this issue, dwelling on the want of prudence shewn by the Government in ordering the Kumamoto men to wear their hair in foreign fashion so soon after depriving them of their swords—precisely the position we argued last week. The *Hochi Shimbun* has shewn, in an excellent article, that the various outbreaks which have occurred since the Restoration have never been led by men who had more than their own or purely sectional interests at heart. Not one of them has ever pleaded the cause of the mass of the people, whose lot is harder than that of the *samurai*. This class is as selfish as it is turbulent, and it is very gratifying to see how vain its late effort has been to defy the authority of the Government.

It may be reasonably inferred that the expressions in Mayebara's manifesto relative to keeping the Emperor in confinement, refer only to the check put on the personal will of the Sovereign by the Cabinet, a thing for which every Japanese should be grateful. A poorer manifesto from a man who wished to arouse the country to insurrection, cannot be conceived, and in the ample light thrown on the movement by the native Press, the causes of its failure are obvious enough. Mayebara seems never to have recovered his dismissal from office, and to have been extremely jealous of those who afterwards rose above him. He had done good service at the time of the Revolution, but probably would have made and did make a very bad chief of a department. He was dismissed, though allowed to retain his official rank, and rewarded with a pension. In view of his extremely conservative opinions the chances are that he would have proved a formidable obstruction in carrying out the large programme of change which, in spite of all difficulties, the Government has succeeded in carrying out, and it is impossible to regret his removal from office. His subsequent defection must be greatly deplored. It is sad indeed to find men who have played a prominent and a worthy part, taking to conspiracy and insurrection, bringing trouble on the very Government they helped to power, and bloodshed on the nation in whose behalf they risked their own lives.

So far as a foreigner can judge, there has been a marked improvement of late in the whole tone of the native press, and yet it has been announced this week not only that the editors of five of the principal journals of the capital have been taken before the authorities for violation of the Press-laws, but that measures of greater stringency are in comtemplation for the repression of public opinion in the newspapers. On the other hand, it has been announced that all the public departments are to be provided with newspapers at the expense of the state, and there is so much contradiction in all this, that it is impossible to infer with any certainty whether the Government is really relaxing its attitude on this most serious question. Assuredly it will do very ill to shut down the valve more tightly than at present. It is strong. It has put down an insurrection in ten days which might have become formidable, and the mind of the country is growing so rapidly that any increased severity in a measure which has already been carried beyond the verge of prudence, cannot but be extremely dangerous. But we cannot believe this rumour, and will hope for the best until forced to take other views.

Kido has contradicted in the public journals the report that he had addressed a memorial to the Throne dwelling on the necessity for awarding to Mayebara the punishment of death.

The Phileas Fogg and Detective Fix of M. Jules Verne, though fictitious, have come within the range of the possible. A letter which left Yokohama on the 24th of August, carried through the United States, was read in London on the 26th of September. The answer to it was received in Tōkiō on the 14th of November, travelling *viâ* Brindisi, and the time thus spent in making the circuit of the world was 82 days. A delay of four days occurred in London in posting the reply, so that the time might have been reduced to 78 days, and M. Jules Verne in his "Round the World in 80 days" distanced by 2 days. The steam and railway lines over which the letter and reply travelled are identical throughout with those traversed by the indefatigable Phileas Fogg.

We shall serve no good purpose by any detailed analysis of the little tempest which arose in the British Court on Monday last. It involved no law or proceeding affecting the interests of British subjects, and we shall readily be excused from the very invidious task of trying to discover and apportion the share of blame which a rigid justice would have to dispense to each of the actors in the scene. But, speaking generally, we think it right to express regret that anything of the kind should occur in a place devoted to the administration of justice, for, as Bacon says, "it is a hallowed place." As it must be without corruption, so it must be without scandal. Be the occupant of that chair who he may, he represents for the time being a force which binds alike kings and subjects, and Justice, as the same writer continues, cannot yield her fruit with sweetness amongst briars and brambles. Patience and gravity of hearing are essential to the dispensation of justice on the one hand, and the preservation of respect, or the forms of respect, equally essential on the other in him who seeks it. Nor are there many of us who can afford to forget the saying of Seneca that 'Anger breaks itself on that it falls."

Original from UNIVERSITY OF CALIFORNIA

The first day of the races held by the new Race Club was perfection itself. Heaven's breath smelt wooingly, as sweet Will says. The sun was bright and warm, the only clouds to be seen formed a delicate fringe of swan's-down round the horizon (— doubtless a compliment to the extreme purity of the Club's proceedings—) and Nature was at her very best. Even during this beautiful autumn we have not had many such days, and if omens count for anything, the Club must be regarded as in the best graces of Fortune. The attendance was good, the Grand Stand well filled with those whose presence is indispensable to success on these occasions, and the introduction of luncheon on the grounds formed a good feature in the programme. The band of the *Tennessee* filled the air with jocund sound, and it must be admitted that the engineering of the whole affair was admirable throughout. The second day was cruelly cold. The ladies were in furs with live charcoal trimmings, and the men wore Ulsters to a *tremolo* accompaniment. Bets issued from between chattering teeth and blue lips, and nothing but snow was wanted to make the thing perfect. To-day—the last day—is as fine as was Thursday, and seems still finer to those who are debarred from spending it out of doors. It was pleasant to hear that some of the members of the old Club had the good sense and feeling to appear on the Stand, and this is as it should be. It is simple nonsense to pretend to ignore a movement of this kind, which starts from a sound basis and has a great deal of very good logic on its side. But nineteen out of every twenty Englishmen are as conservative as Chinese, and while this mental constitution is a source of great strength to them on one side, it certainly blinds them on the other to what the more nimble mind of the Frenchman, for instance, sees at a glance. Viewing the whole affair with an entire absence of prepossession or prejudice, but with a great deal of contempt for silly notions of gentility, and a strong feeling that the more all classes are brought together in national sports the better,—provided good laws are made to regulate them—we think that proper approaches should now be made to bring the two Clubs together, and we are sure that there is enough good sense on both sides to make union feasible. It cannot be disputed that the rules imposed by the new Club are sound in their bearing on the lotteries—which, laugh as we may about their extinction, are as lively as Mother Hubbard's dog after its death and the purchase of its coffin. If they cannot be stopped—and they cannot—let them at least be subjected to the rules of fair play, and not remain, like loaded dice or marked cards, in the hands of those who are not above using such implements. We are quite certain that gentlemen do not wish to put dirty money into their pockets, but we are equally certain that a great deal of dirty money has gone into the pockets, by means of these lotteries, of men to whom one dollar is as good as another; and we have so untiringly set our faces against a system by which the public has been mercilessly plundered, that we declare for any Club which will assist in stopping it. It is of course a truism to say that there must be an element of chance in all lotteries; but this is no reason for opening the door to all kinds of deception and chicanery, and it is against this and this only that our remarks have been directed.

From the highest point of view, all betting is a bad thing. The law has set its face against it, and quite properly so. A severe moralist, however indifferent to winning or losing the actual money, would on principle never make a bet of any kind; but few men who do not care to be reproached for holding principles far above their practice, can assume this attitude, and certainly we shall not pretend to any such severity ourselves—though we envy those who could conscientiously do so. If shilling whist be a sin, "God help the wicked," as Flastaff says, and every country rector in England ought to have an uneasy conscience and troubled dreams. The game gains some additional interest from the stake; you can take your losings from your pocket, and put your winnings, if they disturb you, into the poor-box. It is when the gain or loss of money, as the result of chance, absorbs men so much that the proper discharge of their duty becomes impossible, that betting demoralizes them; and play is like dram-drinking—there is a constant desire to take the stimulant stronger. All this is by the way, however. The fact remains that the Association has had a very successful meeting, and has made some good rules regarding the declaration of their intentions by the owners of ponies, which ought to form part of the rules binding on any Club which may in future represent the racing interests of this community.

But it must not be forgotten that we have had two meetings which, however good under the circumstances, are poor substitutes for one really good meeting. If, in a game of chess, the white king's men were to take it into their heads to fight the white queen's men, and the black army were to act in the same way, there would be but poor sport for the spectators, or even for the combatants. Now this is exactly what has happened this autumn. The left wing of each army has fought its own right wing, and the battles have resembled the Italian wars of the middle ages of which Macaulay gives such an interesting account in his essay on Machiavelli, in which there was all the appearance of fighting, but extremely little of that toughness of purpose or the results of it, which fighting in good earnest demands. We hope for better things from the next Spring Meeting, and between this and then comes Christmas, which knows no feuds, and, let us hope, effaces even the recollections of them.

The short life of the Ephemeris has pointed many a moral, and there is no reason why the extinction of the *Ostasiatische Zeitung*—under circumstances of some embarrassment—should not serve the same purpose.

In a note suggested some few months ago by the appearance of a new publication, which paid our remarks the graceful compliment of immediate retirement—(whom the gods love die young)—we made a few remarks, which the occasion seemed to demand, upon the objections to which the multiplication of newspapers in a small community is open, and the main objection on which we laid stress was that it prevents any one or two newspapers becoming what they should become in order to inform and represent such a community in a country like this. During the past five or six years at least half a dozen of these ephemerides have sprung up in one or other of the open ports, chiefly here or in the neighbourhood, and over each of them Calcott's pretty glee might have been sung:—

Poor insect, what a little day was thine!

It is not many years ago that we heard a man of rare accomplishments and cultivation in London say, that the two most difficult things to do he knew of, were to write a good five act comedy and a good leading article. The Americans say that there is no more common delusion among men than that the editing of a newspaper is within the capacity of everyone. Looking to what many newspapers are, there is no wonder at the universality of the delusion: but looking to what they should be, its magnitude becomes only too apparent. To paint any portrait of this ideal would be to acknowledge shortcomings, deficiencies, blots and errors in this journal of which no one is more sensible than ourselves. But it may be pleaded that so long as this constant sapping process goes on, no foreign journal published in this country can become what it should be. Let us take one single item of deficiency for instance, to illustrate our case. There is hardly any subject of greater importance than that the law reports in a community like this should be thoroughly good and accurate. But it is no disparagement to the reporters for the newspapers here to say that their reports are neither the one nor the other, nor can they ever be so until short-hand writers, who have gone through an apprenticeship of law reporting, are employed. But no newspaper can afford the expense of this. As it is, the founding and maintenance during its immaturity of a journal like that in which these lines now appear, has cost a sum of money which many would regard as a handsome fortune, and the labour expended upon it is far greater than anyone who has not attempted a similar enterprise could possibly conceive—an amount of labour indeed which, intelligently directed in almost any other walk of life, would ensure results which no newspaper in this country can possibly bring. Again, in the matter of news from abroad, the work of "own correspondents" bearing upon affairs in this country or the special interests of those resident in it, what possibility is there of procuring such

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

news in the present condition of things? Absolutely none whatever. Yet it might easily be otherwise under more propitious circumstances. There are many other very obvious considerations connected with this question which might easily be pleaded, but they trench on delicate ground, and must be left to the public both to divine and to settle. The broad fact remains that this multiplication of inferior papers acts adversely to the interests of society, and is extremely derogatory to the Press as an institution.

We desire to make a slight rectification of the statement in an article in last week's issue entitled Beato *v.* the P. & O. Company that "Mr. Wilkinson interposed the suggestion that the issues of fact should be left to the jury, subject to any proceedings which might be afterwards instituted to determine the legal points." We understand that this suggestion proceeded from the defendant's Counsel and was approved of both by the plaintiff's Counsel and Mr. Wilkinson. We should add that we were misled on the point by the report of the case which appeared in our own columns—an apposite fact in illustration of the subject touched on above.

From the "Japan Mail Daily Advertiser."

Monday, 13th.

From the *Akebono Shimbun.*

There is a rumour current that some of the members of the cabinet desire that Mayebara should be leniently dealt with, and therefore he should be brought to Tôkiô, there to undergo examination. But Kido and other Chôshiu men say that he was the sole cause of rebellion, and therefore he must be sentenced to immediate decapitation, according to law. It is said that Kido has already presented a memorial to the Throne to this effect.

From the *Nichi Nichi Shimbun.*

Recently many people of Kumamoto have commenced to wear their hair in the foreign style, and articles of foreign manufacture are fast coming into use there.

Tuesday, 14th.

From the *Chôya Shimbun.*

Her Majesty the Empress will start for Kiôto on the 20th instant.

From the same.

Mr. Ôgi, the Minister of Justice, will leave at once for the South, accompanied by other officials, to examine and punish the captured leaders of the late insurrection.

From the same.

The various steam-ship companies running vessels to Japan, including the Mitsu Bishi Co., have agreed to carry all goods for the Uyéno Exhibition at reduced rates, and have further promised a reduction of passage money to those persons travelling solely for business connected with the Exhibition.

From the same.

It is intended to run a line of Mail Steamers to the port of Fusan in Corea. The first steamer will leave on the 15th instant, and will hereafter run regularly once a month.

From the same.

In the province of Sanuki, Shikoku, the crops have generally been deficient on account of the drought which prevailed during the summer months, and the sugar crop has particularly suffered on this account.

From the same.

Recently all furlough was denied to the troops in the capital, but this restriction was withdrawn on the 12th instant.

Wednesday, 15th.

A small private steam-launch called the *Kome Maru*, built to the order of E. B. Watson, Esq. by Messrs. Whitfield & Dowson, was yesterday successfully launched from the French hatoba, and is perhaps without exception the best finished little craft of that description in Japan waters.

From the *Hôchi Shimbun.*

Chinese have lately been purchasing falcons trained for the sport of hawking, which is fashionable in China.

From the same.

The barracks at Kumamoto, which were set fire to and destroyed by the insurgents, are to be rebuilt without delay.

From the same.

Eleven men of Sendai and Nambu who were under the kind care of Peré Nicolai, went away in a sudden manner on the 4th instant, apparently forgetting the past acts of kindness that they had received from their benefactor.

From the *Nichi Nichi Shimbun.*

His Majesty the Mikado will start for Narashino-hara early on the 16th instant, for the purpose of holding a grand review of the Imperial troops.

From the *Akébono Shimbun.*

Messrs. Ito, Kido, and other officials belonging to Chôshiu, resumed their duties at the *Daijoku'an* on the 10th instant, after having ceased their attendance for some time.

From the *Chôya Shimbun.*

A telegram which was received from Shimané *ken* (Unshiu) on the 12th instant, states that general quietness now reigns there.

From the same.

A temporary *Saibansho* Court will be established at Kumamoto for the purpose of examining those who have been arrested for taking part in the recent insurrection.

From the same.

There is a rumour current that the pensions of the *samurai* of Kagoshima (Satsuma) will be allowed remain undisturbed, as hitherto.

From the same.

A fire broke out at 1 a.m. on the 12th instant at Ko-ishikawa, Tôkiô, and destroyed 41 houses.

From the same.

Laws were recently drawn up for the governance of the Bonin Islands, but it is said that the United States Minister has acquainted the *Gaimusho* with certain objections which he has to the same being enforced.

Thursday, 16th.

From the *Hôchi Shimbun.*

[NOTIFICATION 139.]

Liquid indigo manufactured in Japan will for the present be permitted to be exported free of duty, and when it is determined to levy duty on it, two month's notification to that effect will be given.

SANJÔ SANEYOSHI,
Daijô-Daijin.

November 13th, 1876.

From the same.

Mr. Kondô, Agent for the Japanese Government at Fusan in Corea, left yesterday morning for that port.

From the same.

Kanazawa, in the province of Kaga, was visited by a violent storm on the 7th instant, which felled many trees and caused the rivers to overflow, by which many houses were carried away and several lives lost.

From the *Akébono Shimbun.*

In March 1875 the various Government Departments were forbidden to take in newspapers at the public expense, but this prohibition has now been removed, and each Department is permitted to be supplied with, and charge for, such newspapers as are required.

From the *Chôya Shimbun.*

The Post-office in Tôkiô not being large enough for the present business, a branch office will be established at Honzaimoku-chô, which, it is expected, will greatly relieve the pressure of business at the head office.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

From the *Nichi Nichi Shimbun*,

Mr. Ôgi, the Minister of Justice, who leaves in the *Tôkiô Maru* to-day (the 15th), will land at Shimonoseki and thence proceed to Fukuoka, in the province of Chikuzen, where a Court will be established for the purpose of trying the lately captured insurgents. Other judges will accompany Mr. Ôgi, and proceed direct to Yamaguchi, Kumamoto, Akidzuki and Kagoshima for the same purpose.

We learn from the *Nichi Nichi Shimbun* that quite recently a well dressed young man was staying at the Kashimaya hotel in Benten-Dôri. The youth in question had, apparently, no business and was flush of money, but his way of conducting himself drew upon him the suspicion of the Yokohama police, who were sharply looking out for rebellious *shidzoku*, and thought in this instance they had discovered an insurrectionary leader in disguise. They arrested the youth and subjected him to strict examination, when it transpired, alas for the romance of the affair, that the young man was but a common thief, and confessed to having stolen 50 *yen* at Hiôgo. He was locked up in the police cells.

Friday, 17th.

Foreigners wishing to go off to any Japanese steamer in harbour, other than those of the Mitsu Bishi Company running on the Shanghai line, cannot obtain a boat for the purpose from the English or French hatobas, but are obliged to proceed to the Japanese hatoba at Benten, where alone they can get a boat to take them off. This regulation causes some inconvenience to those foreigners who are engaged on board Japanese steamers, and it is difficult to imagine why such a course should have been taken by the authorities.

From the *Nichi Nichi Shimbun*.

A fire broke out at Ôye-mura in the vicinity of Tôkiô, soon after midnight on the 14th instant, and destroyed some eight houses.

From the same.

Great preparations are being made at Kiôto to receive Her Majesty the Empress.

From the same.

Some 3,500 tubs of *mirin* (a kind of *saké*) have been shipped from Owari to China, and it is hoped that the export of this article will increase and prove remunerative.

From the same.

Mr. Nagai, the editor of the *Yomiuri Shimbun*, after being examined at the *Saibansho* yesterday about an article published in No. 541 of its issue, was remanded in charge of the ward authorities.

From the *Hôchi Shimbun*.

Three Japanese medical men, with the assistance of Doctor Simmons, will open a Hospital for diseases of the eye at Owari-chô, Tôkiô.

From the same.

There is rumour that some 1,000 Satsuma men have arrived at Kobe, but we cannot answer for the truth of the report.

From the *Mainichi Shimbun*.

Seven of the Mitsu Bishi Company's vessels were used on Government service during the insurrection, five of which are now no longer required.

From the same.

The prompt measures which the Government were able to take to suppress the late insurrection were mainly owing to having telegraphic communication with the disturbed districts, which has so clearly demonstrated the value of such communication, that all garrison towns are to be at once connected with the capital by wire.

From the *Akébono Shimbun*.

H. E. Iwakura had to defer his intended journey to Kiôto on account of the rebellion in the south, but it is now expected that he will leave for the western capital in a few days.

From the *Chôya Shimbun*.

The following is the amount of duty received at the Custom House at the open ports in Japan during the month of September:—On exports *yen* 528,159.57, and on imports *yen* 1,619,584.799, the difference ten favour of imports being *yen* 1,091,424.979.

From the *Heiji Shimbun*.

The number of men and officers who were killed or wounded in the recent engagements with the insurgents at Kumamoto on the 24th of October are as follows:—

13 Officers .. .. .. wounded and 3 killed.
17 Non-commissioned officers „ „ 16 „
23 Privates .. .. .. „ „ 92 „
6 Non-commissioned officers and 64 privates missing.

The steamer *Elgin* is reported to have left Shanghai for this port on the 14th, and the *Niger* on the 16th instant.

Saturday, 18th.

The M. M. steamer *Menzaleh*, with French Mails on board to the 7th October, left Hongkong yesterday, the 17th instant, at 6 p.m.

From the *Nichi Nichi Shimbun*.

NOTIFICATION No. 5.

It is hereby notified that an Infant Asylum will be attached to the Female Normal College of Tôkiô.

KUKI TAKAKATSU.
Acting Vice-Minister of the
Education Department.

From the same.

It is said that on the 14th instant Mayebara, Yokoyama, and others, fifteen in all, were removed from Shimane *ken* (Unshiu) to Yamaguchi *ken* (Chôshiu.)

From the *Osaka Nippo*.

The Kagoshima *samurai* are now drilling with great diligence, but it is supposed to be merely for exercise.

From the same.

There was much speculation in rice owing to the outbreak of the late insurrection, but its speedy suppression caused an unlooked-for fall in prices which has occasioned considerable loss to speculators.

From the *Chôya Shimbun*.

Mr. Nagai, the editor of the *Yomiuri Shimbun*, was fined 5 *yen* on the 16th instant for having violated the Libel-laws, by a statement made in No. 522 of the issue of that paper.

From the same.

The police constables who were sent to Chiba *ken* some time ago returned to the capital yesterday, the 16th instant.

From the *Hôchi Shimbun*.

We hear that additional clauses are to be added to the Press-laws.

From the same.

The posthumous rank of *Shônii* has been accorded to the late Prince Tayasu, of the Tokugawa family, on account of distinguished services during the civil war.

From the same.

Eight of the insurgents captured at Hagi were supposed to have belonged to the recently disbanded corps of Marines, and were accordingly brought to Tôkiô, where their identity as such was established by the testimony of several of the crew of the *Asama Kan*.

From the same.

The fall in the price of silk has proved disastrous to the merchants in the neighbourhood of Takasaki.

From the same.

Mr. Oyama, the editor of the *Kanayomi Shimbun*, after being examined at the police station on the 15th instant concerning a statement made in No. 212 of that paper, was placed in charge of the ward authorities.

We learn that Sir Thomas Wade was expected to leave Peking Monday last, on his way home. He may be expected at Shanghai in a few days—*S. C. & C. Gazett.*

REVIEW.*

AS this is the latest, so also is it the best book which has as yet been written about Japan. Hitherto Hildreth's "Japan as it is and was" has occupied the foremost place amongst the not very numerous works treating of this country published within the last quarter of a century; but henceforth that judicious compilation must give place to the present work. Mr. Griffis has had the advantage of nearly four years residence and travel in various parts of Japan, and he writes in that spirit of enthusiastic sympathy which such a residence never fails to inspire in the cultivated foreigner of whatever nationality. His extensive acquaintance with all classes of the people, and his familiarity with many of the scenes and places which he has occasion to describe, impart to his writing a firmness of touch and warmth of colouring which are conspicuously absent in, for instance, such a book as Mossman's 'New Japan,' the author of which was destitute of the primary qualification of having resided in the country about which he undertook to write.

"The Mikado's Empire" consists, as the title page proclaims, of two distinct parts, the first book being a history of Japan, the second, a collection of eighteen miscellaneous papers and essays recording the author's experience, observation and studies during the four years of his residence in the country. A variety of useful information and statistics is given in notes and appendices, and the book is profusely illustrated, as every book about Japan should be, with pictures taken from the storehouse of native art.

The historical portion of the work is of very unequal merit. After an introductory chapter on the physical features of the country, the author plunges into the dense mists of the pre-historic and early historic ages, where he completely loses his way for about a millennium and a half, until he at length strikes into the true path under the guidance of the Nihon Gwai Shi. In other words, the portion of the narrative antecedent to the era of the feud between the Minamoto and Taira houses is all but valueless; for Mr. Griffis' historical method is altogether uncritical. In the title page he professes to give the history of Japan from the year 660 B. C. Now it is true that about five years ago that particular date was officially adopted as the starting point of the new Japanese era, being, as was reputed, the date of the accession of Jimmu Tenno, who is accounted the first human sovereign; but so far as historical considerations have any bearing on the point, a thousand years earlier or later would have made little or no material difference. Jimmu Tenno is an historical character in the same sense only as Nimrod, or Theseus, or Romulus; Sūjin Tenno is the counter-part of Numa Pompilius; and Yamato Dake no Mikoto, like Ancus Martius, is but the shadow of a name. Had the year 660 A. D. instead of 660 A. C. been chosen to indicate the actual beginning of Japanese history, it would have been much nearer the mark; for the first trustworthy chronological data go no further back than the seventh century of our era. The state of affairs revealed to us when the introduction of Chinese letters first sheds light on the scene, is the land inhabited throughout the south-western and central district, by agricultural village communities, the central group of which, in Yamato and the immediate neighbourhood, had been brought into a loose kind of allegiance to a kingly house from the West which had acquired its supremacy by its bows and arrows and maintained it by its fetishes. The north-eastern extremity only of the land was occupied by a still more barbarous race, then as now subsisting solely by the chase, and owning nothing in common with the southern intruders who were gradually dispossessing them of their hunting grounds. Of these aborigines, the Ainos, as they still subsist in the Northern Island, Mr. Griffis gives, in his second chapter, a most interesting account; but if his theory that the Japanese nation is merely an improved branch of the Aino stock, be correct, then the prevailing method and tests of ethnology are worthless. We have the less hesitation in differing from Mr. Griffis on this point when we find him, in the first appendix to his work, seriously propounding the theory of a Japanese origin for the North American Indians. In the present elementary stage of our knowledge concerning the outlying families of the human race, our first recourse, in all questions of ethnic affinity, should be to the evidence of language. It is true, language is not the only clue, nor are its indications to be blindly followed to the exclusion or neglect of physical characteristics; but at all events comparative philology is the oracle we should first consult. And as regards the position of the Japanese language, it gives no dubious response. Japanese has all the structural and syntactical peculiarities common to the Alatyan or Ural-Altaic group; and the evidence of the physiognomical tests points unmistakeably to the same origin for the people. The short round skull, the oblique eyes, the prominent cheek-bones, the dark brown hair, and the scant beard, all proclaim the Mantchus and Coreans as their nearest congeners. In fact it is no longer rash to assert as certain that the Japanese are a Tungusic race; and their own traditions and the whole course of their history are incompatible with any other conclusion than that Corea is the route by which the immigrant tribes made their passage into Kiushiu from their ancestral Mantchurian seats. Mr. Griffis is evidently not quite satisfied with his own theory of Aino descent and immigration through Saghalin, and in his perplexity to account for the manifestly non-Aino element in the nation, goes so far afield as to call in waifs and strays from the Malay peninsula.

We have neither time nor space to follow Mr. Griffis into all the misconceptions into which he is led by his insufficient acquaintance with the native records; but will here only briefly indicate the cardinal defect in his brief review of the period antecedent to the rise of the two great military houses. He either fails to realize, or altogether misses the importance of the fact that for centuries the administrative sway of the Mikado's extended only over a part, and that perhaps not the larger part, of the main island. The Ebisu, or eastern boors, by the subjugation of whom Yoriyoshi and Yoshiiye built up the fame and power of the Minamoto house, were not, as Mr. Griffis supposes, Ainos, but were as pure Japanese as the inhabitants of Kiōtō itself. It was the long resistance made by these eastern tribes to the extension over them of the centralising administrative system which the potentates at Kioto had copied from the Tang Emperors, that necessitated the frequent enrolments of the militia, and led ultimately to the crystallization, so to speak, of the military caste.

On the subject of the origin and growth of Japanese feudalism Mr. Griffis throws very little light. To begin with, he seems to misapprehend the theoretical relation of Yoritomo to the dual administrative system which he founded. In Japan, as in other Asiatic countries, the two main functions of government were the collection of the land-revenue and the repression of rapine. In the palmy days of the Mikado's power both these functions were united in the hands of the prefects, who were appointed from Kioto, with a tenure of office restricted to four years. What Yoritomo ostensibly did was to procure a division of these two departments of governmental activity, leaving one, the collection of the revenue, to the Mikado's functionaries, and obtaining the control of the other, the repression of crime, for himself. This control he acquired, not as Mr. Griffis seems to think, in virtue of his military office of Sei-i Tai Shōgun, but by cloaking his military power under the guise of the civil title of Sō Tsui-ho Shi, which might well be rendered Chief Commissioner of Police or High Constable of the Realm. The extension of the system of appointing military magistrates, which was found to work so well in the Kuan-tō, to the central and western provinces, was effected some years before he received his rank of Barbarian-quelling Generalissimo. The second step in the direction of feudalism Mr. Griffis passes over in silence. This was the system, initiated by the Ashikaga Shōguns, of making the military magistracies hereditary in the families of their own nominees. The third was when Hideyoshi parcelled out the fiefs without reference to the sovereign by titles granted in his own name. This was the precedent that Iyeyasu followed when he based the power of his dynasty on the tie of the personal fealty of the Fudai Daimios and Hatamotos to

* The Mikado's Empire, by W. E. Griffis, A.M., *Harper & Brothers*, New York, 1876.

himself and his successors as lords paramount of their lands.

Another serious defect in this book is the undue brevity with which the two centuries of Ashikaga misrule are passed over in the four pages which constitute the twentieth chapter. From several expressions in subsequent chapters we infer that the author's knowledge of the history of that period is very slight. Are we doing Mr. Griffis an injustice in surmising that his acquaintance with the text of the Nihon Guaishi is not first-hand, and that for the marrow of his historical narrative, the sketch of the Taira, Minamoto and Hôjo houses, he is indebted mainly to Mr. Satow's translation of the first four volumes of that work? That translation, as our readers are aware, first saw the light, and still lies imbedded, in the columns of this journal.

If we have dwelt mainly for so far on the faults of the work before us, it is not because we fail to appreciate its many excellencies. A really good history of Japan from the hand of a foreigner will not be possible for many years to come. The amount of preliminary study required to turn the materials to account is enormous. Every year however will add to the number of labourers in the field, and already the contributions to our knowledge of the country may be said to be increasing daily. The great merit of this book is that it well summarises all the scattered fragments of information procurable up to date, and is further enriched in no slight degree by the fruits of the author's own study and observation. Specially commendable is the resolute vigour with which the writer sets himself to trample down the crop of errors that have until lately overspread the mind of the foreign public in respect to this country. But one or two are still left standing. The practice of speaking of individual Daimios as Princes, is we regret to notice, acquiesced in without protest. It is true this use of the word may claim the sanction of so correct a writer as Mr. Adams, who in his History of Japan occasionally allows himself to be betrayed into it; but we submit that it is only a degree less erroneous than the practice of the early Jesuit writers, by whom the Daimios were dubbed kings. Collectively they were Lords or Barons, and all ranks of the peerage were represented among them, from the Kokushi or Dukes, down to the Hatamoto, or Knights; but, in English usage at any rate, the designation of Prince should be reserved for the family of the Sovereign. And can any shadow of reason be advanced for perpetuating the mistake made by its translator in denominating the will or testament of Iyeyasu the "legacy" of Iyeyasu? The expression is no whit less of an absurdity than it would be to call the document which forms its best known historic parallel, the "legacy" of Peter the Great.

The chief excellence of this firs t part of the work, however, and the one which will be most widely appreciated by the general reader, is the lucid and interesting account given in the concluding chapter of the causes and the course of the recent revolution in this country. The intelligent foreigner who desires an insight into the ideas and motives underlying that great political movement which has attracted, or rather startled, the attention of the western nations, will seek in vain elsewhere for an equally intelligible account of the matter in so succinct a compass. The author follows every phase and turn of the opposing parties and forces, almost with the zeal of a partizan. He is justly proud of the part played by his countrymen Perry and Harris at the commencement of the story, and if he once or twice comes short of being just to individuals and dealings of other nationalities, it is not through the defect of candour or cosmopolitan liberality of sentiment, but rather through excess of burning sympathy with the hardships and difficulties in their upward struggle of the people whom he loves so well.

For ourselves, by far the most entertaining portion of the work is the second book, more especially the chapters in which the author sets before us the aspects of life in a Daimio's castle town during one of the eventful years of national movement and change. Residing in Fukui, the seat of the Duke of Echizen, in the honourable capacity of a teacher, he had opportunities of observing the inner phases of provincial life under the bygone feudal régime, such as few foreigners have enjoyed. And how well he used those opportunities every page of his book testifies.

The number of slips of the pen and printers mistakes are creditably few. Among the most prominent we may point out that on page 119 he makes Kiyomori thirty-six years of age in 1167, when some lines further up he is correctly stated to have been the same age in 1153; on page 286 Wakadoshi is a slip for Wakadoshiyori; on page 313 the battle of Fushimi is post-dated by a month, 27th February being a mistake for 27th January; and on page 578 *inaka* is a slip for *inaka-mono*; and several of the figures in the index require to be corrected.

We cannot sum up our impressions of the book better than by saying that whatever may be its author's deficiencies in point of Japanese scholarship and historical acumen, they are amply compensated for by his knowledge of the country, his powers of intelligent observation, his insight into the national character, his industry in collecting information from every quarter, and, above all, by the rarer qualities of candour, fairness and freedom from national prejudice. The Mikado's Empire is the faithful picture of Japan as it exists to-day.

SPIRIT OF THE JAPANESE PRESS.

Mayebara's Manifesto.

("*Nichi Nichi Shimbun*" 13th November.)

* * * * * * Prime Minister, and other high officials, animated by base sentiments, have wrongfully assumed to themselves high rank and great power. They govern the people without sympathy and lay heavy burdens on them. Heedless of the continued drain of our treasure into the hands of foreign barbarians, they gratify every wish of their own. Knowing the indignation which their acts excite among the people, and that they are in danger of assassination, they surround themselves with men of the Imperial Guard.

The *Daijin* and others who are about the Throne, pretend to be in the service of the Emperor. But, in reality, they only keep His Majesty a prisoner.

For years past these acts have kindled the divine wrath and the indignation of the people, and all who maintain their fidelity to the Emperor have long desired to slay these wicked councillors.

The faithful servants of the Mikado in the province of Higo rose in arms on the 25th inst. and after slaying the men of the garrison, and taking possession of their arms, advanced towards the North. There is nothing in front either to obstruct or resist them, and all faithful men south of Kokura are eagerly waiting their arrival in order to join them.

Ignorant though I was, it pleased our virtuous Sovereign to place me in his Privy Council, seeing that I had formerly done deeds deemed worthy of honour. But as the views I held did not coincide with those of * * * * * * *, I have lived in retirement during the past eight years. My anger burns to see His Sacred Majesty kept in imprisonment and * * * * * * acting just as it pleases him.

Inspired by gratitude for favours received from His Sacred Majesty, I now, in all loyal fidelity, take up arms on his behalf. When I heard of the action of the Higo men I could no longer restrain myself. I rose and they gathered around me in crowds. Here, in this district of San-in, there has not been found one to resist us, and be the result of this action what it may, I call on the whole nation to sustain us in it.

Let all who side with me arm themselves and advance towards the North. Destroy the wicked officials of the capital and release the Emperor from confinement.

If we allow this opportunity to slip by, another may never arrive. Give no lengthy consideration to this question; time is short and punishment will overtake those who hesitate. Delay not. The laws and the Emperor are our strength and guide, and by them shall our conduct be judged.

Mayebara Katsuyoshi.

We understand that the above was written by Mayebara while at Hagi in order to excite the *samurai*, but this is mere rumour, and we are uncertain whether we should believe it.

The main object of the manifesto is to show that the objects of the insurrection are reasonable, and than men should therefore join it. But it betrays alike narrowness of mind and want of due consideration. Any person of common sense reading it will not only laugh at its absurdity, but become indignant at the want of justice it displays, and it is natural enough that though several

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

hundred men joined Mayebara's standard they were subdued and dispersed in a few days.

As we have said on previous occasions, Mayebara is the leader of this southern insurrection, and he had agreed with the *samurai* of the North and South on plans which were to have been carried out in the early part of this year. Now that the affair is over and we can look back upon it, it is clear that there were previous indications from which it might have been predicted.

Mayebara has acted in this desperate manner because he could not free his mind from the fetters of the feudal system, and was bent on advancing his interests and gratifying his ambition without making the welfare of the country his first thought. He could neither persuade the middle class to listen to him, nor associate with the men of the higher class who are bent upon the advance of the country in civilization, and gradually discontent has overpowered all his better feelings.

And now let us turn to the men who aroused the insurgents of Yamaguchi. They all belonged to a useless class who stood quite apart from the leading men of the clan. What could a few hundreds of such men do? and, in this light, how clear it is that the Hagi affair was not brought about by any majority of the Chôshiu men!

But neither can it be claimed that the insurgents comprised the lingering admirers of the feudal system. They were nothing more than the personal followers of Mayebara, and the reckless manner in which they went to work naturally enough brought about their ruin.

But what was the *Jimpu* party associated with Mayebara?

It was composed of such men as Otaguro, Kaye and Uyeno, who are besotted with ideas about old customs and desire to see the *Joi* cry again resounding through the country. There were many other men (worth gaining) in Kumamoto, but they would not listen to Mayebara's arguments, and thus these three men formed an obscure party of their own, and, disliking those changes and reforms which the progress of the country demanded, joined with Mayebara and acted in the manner already so often described in order to vent their anger. Thus the men who rose at Kumamoto did not belong to the feudal system party, but to the *Joi* party.

Now, who were the Tokiô men who conspired with Mayebara? Nagaoka,* their leader, was an Aidzu man. The *samurai* of Aidzu would not disgrace themselves by associating with him, and, naturally enough, he failed to gain many adherents to the cause. Others were men so poor that they had barely enough to procure the necessaries of life, and, glad to do anything for a living, they thoughtlessly followed Mayebara as their leader.

Has not Mayebara proved himself a fool? Wishing to attain to greater fame and honour, he has brought on himself the loss of that which he already possessed. His rashness in acting with these men of the *Jimpu* party and others like them can only be regarded as madness.

That they have all been captured is nothing more than the fate they deserve. But not the less is it a blot on our history that a man who had formerly acted with so much courage and honour as Mayebara became the leader of an insurrection, and the Chôshiu men will lament that their province gave birth to such a man.

And is not Mayebara's crime great, seeing that he has brought disgrace upon Kumamoto and Akidzuki? Moreover, some who, like ourselves, were engaged in editorial work, joined him, and this has brought disgrace on the whole Press.† We are persuaded that the men of Yamaguchi, Akidzuki and Kumamoto now lament deeply the disgrace brought upon them.

Mayebara and his Motives.

(Nichi Nichi Shimbun.)

It is a deplorable fact that there are men who change their course to suit their interests, forgetting that a man's first duty is to follow the dictates of his conscience.

Certain men who held the highest posts in the Government at the close of the Revolution, showed, after quitting them, an extreme obstinacy in acting without the least heed as to whether their course would be beneficial to the State or otherwise, and much injury has resulted from this.

Not long ago we had Yeto at Saga, and now we have Mayebara in Choshiu. How is it that these men should soil the pages of our history with blood-stains, and this too at the expense of their own reputations?

It is now unnecessary, and it is not our wish, to dwell on the career of Mr. Yeto. He forfeited his life; and the estimate of his career and of the Saga insurrection is fixed in the popular mind.

But what is the character of Mayebara? When a man assumes a responsible position as the leader of a party, he should surely be able to see clearly the difference between good and evil. The part played by Mayebara shows that his ambition or his interests have blinded his conscience.

Mayebara took a leading part in the late civil war, and, having done deeds of honour, was appointed to a high post in the administration. He was distinguished by retaining his title of *Jushi-i* after quitting office, and was honoured with a special pension as a reward for his services. He ranked in the popular mind with Goto, Soyeshima and Itagaki, while many placed him side by side with Saigo Kichinosuke. Now if he be comparable with these men, neither the abolition of the *Han* nor the issue of the new bonds representing the capitalized pensions of the nobles and gentry should have been deemed any injustice by him. Still less should he lament over changes which evince our progress towards a higher civilization. What legitimate cause had he then for discontent?

Mayebara must have put forward some plea on which to ground this insurrection. He must have excited the *samurai* by telling them that the Government was treating them with intolerable injustice, or that it conducts the affairs of the State recklessly. But we think that he would only say this for the purpose of raising a cry against the administration. In his heart he surely did not think so.

It is our belief that his discontent originated in the pride with which he reflected on his noble deeds in the late civil war. Not being a man of remarkable abilities he could not support himself long in his high post, and yet since his return to his native province he has never abandoned the desire for office, envying other men their rise in the national councils. Conscious of his great services during the late war, he thought he had the right to a high position and to enjoy the prospect of his honours descending to his family. He felt himself wronged, first by his dismissal after the war, and then that thenceforward he should differ from the ordinary *shizoku* only by holding an official rank and a pension which the Government had bestowed on him. He was ashamed of that which should not have caused him shame, he was devoured by unfulfilled ambitions, and in this mood he appealed to the *samurai*. This was clearly the origin of the insurrection. The plans on which it was to be carried out must have been formed years ago, and when the conspiracy was matured the Kumamoto outbreak occurred and other places burst simultaneously into flames. But Mayebara did not conspire with the *samurai* because he agreed with them. Like them, indeed, he was discontented, though the causes of their common discontent differed. It is but natural that an insurrection thus originating should fail. We understand that Mayebara's party was totally routed by the Imperial troops on the 6th instant, and before many days are over he will have lost his head.

Now there are many men who change their course as the times change, and they are often if not mostly found among those who have done honourable service in past times. Their pride at the memory of this arouses them, ambition spurs them on, and, once in motion, they know not where to stop. Men of just renown thus bring ruin on themselves by leaving the path of duty, and trying to advance their interests or gratify their ambition.

Let this be a lesson and a warning to all men who have done noble deeds.

Will the late Insurrection promote Civilization in Japan?

(Chôgi Shimbun, 9th November.)

It is sometimes said that wars are as mile-stones which mark the advance of a country in civilization. But, regarded from an economical point of view, war causes the loss of a large number of precious lives and much property, inflicts great hardship upon the people, and, viewed in this light, seems to be a mile-stone marking the backward slip of a nation. It is not always so, however, for wars may promote the progress of civilization.

It may be asked, will the late insurrection tend to the advance of our civilization or not?

At the present moment we see the officials in a state of great anxiety, and many of the people frightened almost out of their wits; and of this it can only be said that it is very injurious to us. Moreover, the civil and military officers who were slain at Kumamoto must have left families behind to lament them, so that at

---

* Nagaoka is here unduly depreciated. He is a scholar of great learning, and might possibly feel as little disposed to associate with the *samurai*, as they with him.

† This pointed reference is to a Mr. Maki, who acted as the editor of the *Hoson Shimbun* during the months of June and July. The newspaper was very extreme and violent in much of the writing which appeared in it, and was suspended on this account some little time ago. [ED. J.W.M.]

Original from UNIVERSITY OF CALIFORNIA

present we cannot see that the slightest good has accrued from the insurrection. But when the country has resumed its usual tranquillity, we may hope that the outbreak will have left some good behind it, and we will shortly give our reasons for thinking so.

The men who caused the rebellion are the discontented *samurai*, who greatly obstruct our national advancement. They are very ignorant, and think that the only way in which they can show their patriotism is by deeds of bloodshed. Were they to hold the preponderance of power in their hands, the country would soon fall back into its old condition, when dexterity in the use of the sword, and not the force of his brain, was the glory of man. The people would then suffer in the same manner as the French did during the ascendancy of the Jacobin party. We are certainly now on the road to advancement, and the people are gradually obtaining rights of which they have hitherto been deprived. If they are to enjoy these advantages and rights, this discontented class must be got rid of.

The Imperial forces have already subdued the Kumamoto insurgents, and although Mayebara's party is still said to possess some strength, it is clear that it will be overpowered in a few days. This being so, it may be pleaded that we are to a certain extent freeing ourselves from the attacks of this discontented class, and the people will soon be led to see that the glory of man is in his brain, not in his muscles. The bloody strife of to-day may therefore become the mile-stone which future generations will regard as marking another step in our civilization.

The Insurrection.

("*Chôya Shimbun*" November 10th.)

The breaking out of the Kumamoto insurrection was sudden and took everyone by surprise. But it has been as speedily quelled, and all are now relieved from anxiety. The echoes of the war-cry extended to Chôshiu where the *samurai* opposed the Imperial forces in arms. Now the Chôshiu men are accustomed to war, and moreover they had at their head Mayebara, a man well acquainted with military affairs, and in this respect they differed much from the leaderless rioters of other *ken*. Had the insurgents in Kiushiu been more successful it is impossible to estimate the calamity which would have befallen the country. Happily, the insurgents carried out their plans badly, and the Government lost no time in opposing them. They were routed, and in a short time dispersed in all directions. A brief period of ten days only elapsed between the breaking out of the Kumamoto affair and the settlement of the affair at Hagi. So brief indeed was it, that one is inclined to think that Fate preordained the failure of the insurrection.

Since the overthrow of the Tokugawa forces at Hakodate, no warlike proceedings have taken place in Japan. The minds of both Government and people have been turned in the direction of education and other peaceful matters, and men were beginning to forget the spirit of war, for though several conspiracies had been formed, the steps taken to defeat them were at once effectual. At the time when the Saga insurrection occurred, the people generally were alarmed by it, indeed, but it was quickly suppressed, and the vigour shewn in effecting this undoubtedly frightened the party which is so jealous of all innovations upon old customs.

It was therefore to the surprise of all that the Kumamoto insurgents rose, and alarm was not unnatural when the telegraph announced that the barracks were destroyed, that many officers and men had been killed and the Imperial troops dispersed. No one imagined that this could have been the work of less than two hundred men, and much anxiety was felt in consequence. Happily the insurgents were few in number and there plans ill laid. Taking advantage of the night they did all the mischief they could with fire and sword, and when day dawned they were found to have fled and been scattered in all directions. At Hagi and Akidzuki the insurgents altogether failed in their purpose, but it is a miracle that the whole of the southern part of the country was not involved in bloody strife.

Although peace has been preserved since the Revolution, there are many who still dislike the various changes and reforms which the Government has made, and who were sharpening their swords and waiting for an opportunity to show their valour. They were sadly disappointed at the result of the Saga affair, and the failures at Hagi and Kumamoto have again disconcerted them. This affords an excellent warning to the *shizoku*, and ought to show them the folly of trying to oppose the Government in this lawless manner.

Thus the Government may justly feel relieved to a certain extent by the result of the late affair. Yet it will do well to see that the people cannot be treated with contempt. It must not suppose that it has the power to put an end to all troubles which might arise, and that whatever might be attempted by the people will have the same issue as the affairs at Saga, Hagi and Kumamoto. Should it persist in doing everything its own way and turn a deaf ear to the complaints of the people, it is impossible to foretell what calamity might befall it. Has not a mob of less then two hundred ill-armed men put a whole garrison to flight; and has not the Government been forced to send troops from various other garrisons in the Empire, and set the whole country in convulsions in order to overpower the insurgents at Hagi?

The Government has been caught off its guard, and this because it erroneously thought the people a set of powerless and contemptible beings.

YOKOHAMA RACING ASSOCIATION.

The Association had charming weather for the first day of their meeting. The Grand Stand, which had been tastefully decorated for the occasion, was well filled, the fair sex being numerously represented, but the attendance in the paddock was not quite so great as we have been accustomed to see, while there were very few native spectators on the ground. The band of the U. S. flag-ship *Tennessee* was in attendance, and played some excellent music during the day.

First Day.

Thursday, 16th November, 1876.

1. The Germania Cup.—Presented. Value $—. For Chins Ponies that have never won a flat race here. Weight for inches. Entrance $5. One mile.

Mr. Robertson's *Favori*, 10st. 5lbs..... 1
,, Sinbad's *The Judge*, 10st. 8lbs..... 2
,, W. Fairplay's *Niboo-kin*, 10st. 5lbs..... 3
,, Earnest's *Trustee*, 10st. 8lbs..... 0

For the first event the four above-named ponies started. *The Judge* rushed off with the lead, having *Niboo-kin* well up and followed at an interval by *Favori*, with *Trustee* lying behind. This order was maintained to the half mile, where the three ponies leading closed up. At the trees *Favori* took the lead and raced hard down the straight with *The Judge*, *Niboo-kin* being just behind, and *Trustee* lessening the gap with a rush to catch the leaders. *Favori* maintained his advantage well, and won a good race in the capital time of 1 m. 19½ secs.

2. The Griffins' Plate.—Value $140. A Sweepstakes of $10 each (with $50 added) for Japan Ponies, being *bonâ fide* Griffins. Weight for inches. Five furlongs.

Messrs. Takasaki and Kataska's *San-no-he*, 10st. 6lbs... 1
Mr. Robertson's *Othello*, 10st. 8lbs..... 2
Messrs. Takasaki and Kataska's *Sekimoto*, 10st. 4lbs.... 3
Count Tristan's *Daimio*, 10st. 6lbs..... 0
Mr. Robertson's *Moor*, 10st. 2lbs 0
,, Whitney's *Sensation*, 10st. 10lbs..... 0
,, Alexander's *Griffin*, 10st..... 0

This brought out a field of seven, who got off to a good start with but little delay. *Daimio* swerved at the post and was never in the race, and *Moor* also spoiled his chance by rushing to the outside rails. The others, well together, were led by *Griffin*, who bolted on entering the straight, as did also *Othello*, who was rather the favourite for this race. The rest headed by *San-no-he*, though running a little wide, kept comparatively straight and thus secured a great advantage, and though *Othello* made a gallant effort he could not overhaul *San-no-he*, who won by half-a-length. This result was certainly due to the merits of the pony, as he got anything but assistance from the Japanese jockey who rode him. Time, 1 m. 24 secs.

3. The Lusitanian Cup.—Presented. Value $150. For all Ponies. Weight as per scale. Entrance $5. Three-quarters of a mile.

Mr. Robertson's *Mandarin*, 10st. 8lbs..... 1
,, Earnest's *Title Deed*, 10st. 5lbs..... 2
,, Whitney's *Sovereign*, 10st. 11lbs..... 3

Out of fourteen entries only three ponies appeared at the post, where great delay was occasioned by the obstinacy of *Title Deed*, who for a long time refused to face the starter. When at last they did get away *Sovereign* jumped off with the lead, which, however, he had to yield almost immediately to *Mandarin* followed by *Title Deed*. The former had the race secure from the commencement, and despite all that *Title Deed* could do cantered in an easy winner. Time 1m. 39 secs.

4. The Club Cup.—Value $100. For Japan Ponies. Winners of any open Race excluded. Weight for inches. Entrance $5. Five furlongs.

Mr. Ola's *Moscow*, 10st. 4lbs..... 1
,, Robertson's *Doctor*, 10st. 6lbs..... 2

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Only two ponies contested for this prize. *Moscou* led from the post and was never headed, winning by a couple of lengths in 1 m. 21½ secs.

5. The Cathay Cup.—Presented. Value $100. For China Ponies. Weight for inches. Entrance $5. One mile and a half.

Mr. Whitney's *Sequin*, 10st. 8lbs..... 1
Lady Fox's *Dixie*, 10st. 8lbs..... 2
Mr. Robertson's *Favori*, 10st. 5lbs..... 3
,, Fairplay's *Nibon-kin*, 10st. 5lbs..... 0
,, Earnest's *The General*, 10st. 11lbs..... 0

The General made the running closely followed by *Dixie*, *Sequin* being not far off, but *Favori* and *Nibon-kin* kept well in the rear. This order was maintained past the Grand Stand and up the hill, at the top of which *Sequin* took the lead, pressed hard by *Dixie*. *Favori* and *Nibon-kin* seemed unable to pick up the distance they had allowed the others to gain, while *The General* was beginning to tail off, so that the race lay between the two leaders. *Sequin* never gave up the advantage he had obtained, and racing down the straight with *Dixie* came away when called upon, and landed an easy victor with plenty to spare. Time 3 m. 39¼ secs.

6. The Tokio Bankers' Cup.—(1st Prize.) Presented. Value $100. For China Ponies. Weight for inches. Entrance $5. Three quarters of a mile.

Mr. Robertson's *Oyama*, 10st. 2lbs..... 1
,, ,, *Doctor*, 10st. 2lbs..... 2
,, Ola's *Lodi*, 10st. 4lbs..... 3

A fair start was effected, and the three competing ponies kept pretty well together, *Lodi* leading, *Doctor* being nearly level with him and *Oyama* not far behind. At the trees *Oyama* took second place and challenged the leader, but on entering the straight bolted and lost the advantage he had obtained. This gave *Lodi* a fine chance which a good rider would have made the most of, but unfortunately for the pony's success he was ridden by a Japanese jock who had not the necessary command of his mount. The *Doctor* came up again in the straight and the race seemed to be between him and *Lodi*, the latter still leading. In the meantime *Oyama's* rider was bringing his pony along the outside rail, and as he showed signs of collaring the leader, the rider of *Lodi* essayed to flog his pony, but at once lost all firmness of seat, and spread himself all over his pony, who seemed to stop short in disgust at being so badly ridden, thus allowing *Oyama* to cleverly rush in and win by a neck from the *Doctor*, who beat *Lodi* by a length. This race was won by good riding, and, as regards one pony, lost by bad riding. Time 1m. 39¼ secs.

7. The Naval Cup.—Presented. Value $ —. For all Ponies that have never won a flat Race in China or Japan. Weight as per scale. Entrance $5. Half a mile.

Mr. Robertson's *Nick*, 10st..... 1
,, Earnest's *Title Deed*, 10st. 5lbs..... 2
,, Fairplay's *Satz*, 10st. 5lbs..... 3

From the post the race lay between *Title Deed* and *Nick*. On entering the straight the leaders ran wide and gave a chance to *Satz*, of which, however, he could not avail himself to any purpose Although *Nick*, a Japan pony, had only 5lbs advantage of his opponent he contrived to keep the lead, and eventually won without much distress by about a length. Time 64½ secs.

8.—The American Cup.—Presented. Value $—. For China Ponies. Winners at this meeting, 12 stone; other ponies weight for inches. Entrance $5. One mile and a quarter.

Mr. Robertson's *Dibs*, 10st. 8lbs..... 1
,, Earnest's *Tenshe*, 10st. 8lbs..... 2
,, Whitney's *Sovereign*, 10st 11lbs..... 3
Lady Fox's *Antidote*, 10st 8lbs..... 0

This was rightly looked upon as a certainty for *Dibs*. *Antidote* rushed off with the lead which he kept to the half-mile, where he was challenged by *Dibs* who had come through his ponies, and passed without apparent effort. The favourite cantered in a winner, hard held. Time 3 m. 1¼ secs.

9.—The Welcome Plate.—Value $100. For Japan ponies. Winners of two Races in any previous meeting, 12lbs. extra. Winners at this meeting excluded. Weight for inches. Entrance $5. Half a mile.

Mr. Robertson's *Tim Whistler*, 11st. 6lbs..... 1
Count Tristan's *Daimio*, 10st 6lbs..... 2
Messrs. Takasaki and Kataska's *Sekimoto* 10st 4lbs..... 0

Daimio had a good chance for this but would not start when the flag was lowered, and so virtually lost the race. *Sekimoto* and *Tim Whistler* were close together at the trees, when the Japanese rider of the former attempting to flog lost his seat, and allowed *Tim* to canter in as he liked. *Daimio* who had come up very well indeed, might have run *Tim* hard down the straight, had not *Sekimoto*, after having got rid of his rider, made for him with open mouth, and so completely baulked him. Time, 68¼ secs.

At the conclusion of the day's racing Mr. Robertson, accompanied by his successful jockey, proceeded to the Grand Stand to receive from Mrs. Machado the very handsome prize which represents the Lusitanian Cup. In presenting it Mrs. Machado congratulated Mr. Robertson on winning it, who in reply said that, greatly indebted as the Association were to the Portugese residents for the beautiful prize presented, he was bound to acknowledge that it was altogether owing to his rider, Mr. Urquhart, that he had won it, and he should value it as a proof of his jockey's success and a token of the interest the Portugese residents took in the Association Races.

Second Day.

Friday, 17th November, 1876.

The good fortune of the Association as regards the weather of the first day did not extend to the second, as yesterday was cheerless and chilly, and about as uncomfortable a day for racing as could be well imagined. Notwithstanding this the ladies mustered in considerable force and the Grand Stand was fairly filled, but there was a great falling off in the attendance in the paddock, and that of the natives was scanty in the extreme. Ulsters were the order of the day, and the problem was how to attain an amount of bodily heat requisite for comfort. Under these circumstances it was wonderful that so much spirit was infused into the day's racing as was the case. The band of the *Tennessee* was again in attendance and rendered most efficient service.

1. The Community Cup.—Presented. Value $200. For all Ponies. Winners of two races at the meeting 7lbs. extra. Weight as per scale. Entrance $5. Once round.

Mr. Robertson's *Dibs*, 10st. 8lbs..... 1
,, Fairplay's *Nibon-kin*, 10st. 5lbs..... 2
,, W. Earnest's *The General*, 10st. 11lbs..... 0

This was, of course, a certainty for *Dibs*, who quietly lay back at the start and allowed the other two to lead up the hill, but at the top closed up just when *The General* began to show symptoms of fatigue. At the half mile *Dibs*, having passed *The General*, came level with *Nibon-kin* and went by him at the trees, from which point he cantered in ahead as if taking his ordinary exercise. At the three furlongs *The General* bolted, and jumping the rails unseated his rider, scoured away across country, and was only caught after some considerable time and trouble. Time, 2 m. 24 secs.

2. The Tokio Banker's Cup.—(2nd Prize.) Presented. Value $100. For Japanese Ponies that never won a race. Weight for inches. Entrance $5. Half a mile.

Messrs. Takasaki & Kataska's *Sekimoto*, 10st. 4lbs..... 1
Mr. Robertson's *Moor*, 10st 2lbs..... 2
,, Alexander's *Griffin*, 10st..... 3
Count Tristan's *Daimio*, 10st. 6lbs..... 0
Mr. Robertson's *Othello*, 10st. 8lbs..... 0
,, Whitney's *Sensation*, 10st. 10lbs..... 0

There was a tedious delay at the post, and when they finally got away *Daimio* lost ground at the start as he has always done. *Othello* bolted at the three furlongs, the others going away headed by *Moor*. *Griffin* bolted at the turn, and the race resolved itself into a good struggle between *Moor* and *Sekimoto*. The former was done as the winning post was neared, and could not prevent *Sekimoto* from securing the prize by a head. Time 66½ secs.

3. The Challenge Cup.—Value $125. For China Ponies. Weight for inches. Entrance $5. One mile and three-quarters.

Mr. Robertson's *Dibs*, 10st. 8lbs..... 1
,, Whitney's *Sequin*, 10st. 8lbs..... 2
Lady Fox's *Dixie*, 10st. 8lbs..... 3

This was again rightly looked upon as *Dib's* race. He let the other two go ahead, led by *Sequin*, and when called upon the second time round at the 5 furlongs came up to his opponents without apparent effort, led at the half mile and won hands down without having been touched. *Sequin* was a bad second, and *Dixie* was pulled up as he was completely done at the trees. Time, 4 m. 24½ secs.

4. The Import Cup.—Presented. Value $120. For all Ponies. Winners of Nos. 3 and 7 on the first day excluded. Weight as per scale. Entrance $5. Half a mile.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Mr. Earnest's *Title Deed*, 10st. 5lbs..... 1
,, Ola's *Lodi*, 10st. 4lbs..... 2
,, Sinbad's *The Minister*, 10st. 5lbs..... 3
Lady Fox's *Antidote*, 10st. 8lbs..... 0
Mr. Fairplay's *Satz*, 10st. 5lbs..... 0

There was again trouble at the post and much consequent delay. When they did start *Lodi* at once took the lead and looked very like winning, as he was only passed just at the post by *Title Deed*, whose rider brought his pony down the straight capitally, and just succeeded in wresting the prize from *Lodi* by good riding alone. Time 1 m. 3½ secs.

5. The Celestial Cup.—Presented. Value $100. For China Ponies. Winners of Nos. 1 this day and winners of two races at this meeting 11 stone 7 lbs.; other winners 7 lbs. extra. Weight for inches. Entrance $5. One mile and a quarter.

Mr. Roberston's *Dibs*, 10st. 8lbs. 1
,, Earnest's *Trustee*, 10st. 8lbs..... 2
,, Mr. Whitney's *Sovereign*, 10st. 11lbs 3

The crack pony again appeared, as if his previous runnings had been merely preparatory breathers, *Sovereign* jumped off with the lead followed by *Title Deed*, the favourite biding his time as usual. At the half mile he chose to lead and thence cantered in a winner without being pressed. Time, 3 m. 6 secs.

6. The French Cup.—Presented. Value $—. For Japan Ponies. Winners of any open race excluded: other winners 8 lbs. extra. Weight for inches. Entrance $5. Three-quarters of a mile.

Mr. Ola's *Moscou*, 10st. 4lbs..... 1
,, Robertson's *Moor*, 10st. 2lbs..... 2
Messrs. Takasaki, and Kataska's *San-no-he*, (8lbs. ex.) 11st. 3
Count Tristan's *Daimio*, 10st. 6lbs..... 0
Mr. Robertson's *Othello*, 10st. 8lbs..... 0
,, Whitney's *Sensation*, 10st. 10lbs..... 0

Daimio, of whom great things were expected, disappointed his backers by his usual disinclination to join the others on the fall of the flag. The race throughout was a match between *Moscou* and *Moor*, and the two made a capital struggle together down the straight, which resulted in favour of *Moscou* by a head. Time 1 m. 45½ secs.

7. The Eastern Club Cup.—Presented. Value $100. For China Ponies. Winners at this meeting excluded. Weight for inches. Entrance $5. Three-quarters of a mile.

Mr. Sinbad's *The Judge*, 10st. 8lbs 1
,, Earnest's *Trustee*, 10st. 8lbs..... 2
,, Whitney's *Sovereign*, 10st. 11lbs..... 3
,, Fairplay's *Niboo-kin*, 10st. 5lbs..... 0

Niboo-kin jumped off with the lead, but all the ponies starting kept well together to the trees, where *The Judge* took a slight lead with *Trustee* well up. Coming down the straight *The Judge* responded to the call his rider made upon him, came away and won by several lengths. Time, 1 m. 43 secs.

8. The Ito Cup.—Presented. Value $115. For Japan Ponies. Winners at this meeting excluded. Weight for inches. Entrance $5. Five furlongs.

Mr. Ola's *Mohstotz*, 10st. 4lbs..... 1
,, Robertson's *Doctor*, 10st. 6lbs..... 2
,, ,, *Moor*, 10st. 2lbs..... 3
,, ,, *Othello*, 10st. 8lbs..... 0

Only a field of four appeared at the post and yet there were as many false starts before they finally got away. *Othello* bolted as the flag fell and was never in the race, while the other three kept well together. On entering the straight *Moor* ran wide and destroyed his chance, and the race then lay between *Mohstotz* and *Doctor*. The former, who had the advantage of being ridden by a foreign jock and had taken the lead at the trees, had it all his own way, and won easily in 1 m. 27 secs.

9. The Roadster's Plate.—Value $75. For all ponies, being *bond fide* Hacks, and not otherwise entered except on the third day for Nos. 1, 5, 6 and 7. Weight as per scale. Entrance $5. Three-quarters of a mile.

Mr. Hugo's *Davenport (late Piastre)* 10st. 11lbs..... 1
,, Lyon's *Kickapoo (late Kangaroo)* 10st. 8lbs..... 2
,, Alexander's *Luck's all (late Tornado)* 10st. 2lbs.... 3
,, Beato's *Oreola*, 10st. 5lbs..... 0
,, Logan's *Madarasku*, 10st 6lbs..... 0
,, Whitney's *Doncaster*, 10st. 5lbs..... 0

Luck's all broke away from his bettoes as he was being led out, knocked one of them down and inflicted a severe kick on the man's head. It was only with great trouble, and after much delay that the runaway pony was driven into the paddock and secured. The six who appeared at the post got off well together, *Luck's all* rushing away with the lead, which he had to yield at the trees to *Davenport*, who had the race secure from that point and won with plenty to spare. *Kickapoo*, who ran wide at the turn, beat *Luck's all* for second place. Time 1 m. 46 secs.

It cannot be said that the racing was exceptional or that good time was made in any instance, but then it should be borne in mind that *Dibs*—probably the best pony in Japan—was never pushed at all, and won three races, Nos. 1, 3 and 5, respectively one mile, one mile and three-quarters, and one mile and a quarter, in a common canter on each occasion, although there was no long interval between the several races, and he had to carry penalty. It is a great pity that *Dibs* should not have had an opportunity to do his best against the cracks of the Yokohama Race Club, as such a competition must have been productive of undoubtedly good racing.

Third Day.

Saturday, 18th November, 1876.

The morning broke gloomily, but by ten o'clock all clouds had dispersed before the welcome sun, which partly dried up the rain which fell on the previous evening and made the course less heavy than was expected, but yet not in the best condition for racing. The attendance of ladies was good, and in the paddock was about the same as on previous days, but the natives were conspicuous by their absence. The band of the *Tennessee* again played through an excellent programme.

1. The Hurdle Race.—Value $75. For all Ponies. Over six (6) hurdles. Weight as per scale. Entrance $5. Once round and a distance.

Mr. Robertson's *Tim Whiffler*, 10st. 12lbs..... 1
,, Lyon's *Kickapoo* (late *Kangaroo*) 10st. 8lbs..... 2
,, Fairplay's *Satz*, 10st. 5lbs..... 0
,, Earnest's *The General*, 10st. 11lbs..... 0
,, Hugo's *Davenport*, 10st. 11lbs..... 0

The General and *Tim* took the first hurdle together but conceded the lead to *Satz* up the hill, whose rider lost his stirrup at the second hurdle and was out of the race. *The General* swerved at the second hurdle, and rushing at the outside rail upset himself and his rider. In the meantime *Tim*, who had swerved at this point also, was put at it again and bucked himself over this and subsequent hurdles, cantering in a winner with no one else near him. *Kickapoo*, by taking his time, got over all the hurdles and made a bad second. *Davenport* slipped and fell just before reaching the third hurdle, upset his rider and bolted. The gallant young naval officer who was riding *The General* pluckily remounted and raced in with *Satz*, beating him in the run in.

2. The Champagne Cup.—For China Ponies. Compulsory on Winners at this meeting. A Sweepstakes of $10 with $5 extra for every race won at this meeting. Open also to Ponies placed second, at an entrance fee of $5. Entries to be made at the close of the second day's racing. Weight for inches. One mile and a quarter.

Mr. Robertson's *Favori*, 10st. 5lbs..... 1
,, Whitney's *Sequin*, 10st. 8lbs..... 2
,, Robertson's *Dibs*, 10st. 8lbs..... 3
,, Earnest's *Title Deed*, 10st. 5lbs..... 0
Lady Fox's *Dixie*, 10st. 8lbs..... 0

Mr. Robertson declared to win with *Favori*. *Sequin* and *Title Deed* led past the Stand, *Favori* being in close attendance, and in this order they went up the hill, where *Dixie* fell far astern and never recovered the gap. *Favori* and *Sequin* led together at the half mile, the others being just behind. Entering the straight *Favori* came away from *Sequin* easily and won by several lengths. *Dibs*, hard held, cantered in third. Time, 2 m. 59 secs.

3. The Autumn Stakes.—For Japan Ponies. Compulsory on winners at this meeting. A Sweepstakes of $10 with $5 extra for every race won. Open also to Ponies placed second, at an entrance fee of $5. Entries to be made at the close of the second day's racing. Weight for inches. One Mile.

Mr. Robertson's *Oyama*, 10st. 2lbs..... 1
,, Ola's *Moscou*, 10st. 4lbs..... 2
Count Tristan's *Daimio*, 10st. 6lbs..... 3
Mr. Robertson's *Nick*, 10st..... 0
,, ,, *Moor*, 10st. 2lbs..... 0

Some delay was caused by *Daimio* bolting, and when he did start he would not gallop and was far in rear of the others going up the hill. The rest kept together to the 5 furlong post, where *Oyama* and *Moscou* left the other two and raced home together. *Oyama* had the lead on entering the straight, but *Moscou* came dangerously

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

close on nearing the post, and *Ogama* had the greatest trouble to win by a head. Another rider than the Japanese on *Moscou* might have altered the result. Time 2 m. 21 secs.

4. THE TOKIO BANKERS' CUP.—(3rd Prize.) Presented. Value $100. For all Ponies. Weight as per scale. Entrance $5. Three furlongs.

Mr. Ola's *Mohstok*, 10st. 6lbs.	1
Messrs. Takasaki and Kataska's *Sekimoto*, 10st. 4lbs	2
Mr. William's *Pizzgana*, 10st. 5lbs.	3
Lady Fox's *Antidote*, 10st. 8lbs	0
Mr. Earnest's *Tich Dead*, 10st. 5lbs	0
Mr. Robertson's *Mandarin*, 10st. 8lbs.	0
Mr. ,, *Gladiateur* 10st. 11lbs	0
Mr. Alexander's *Griffin*, 10st	0

There were eight starters out of a field of sixteen. They got off to a bad start and *Pizzgana* led to the quarter, where *Mohstok*, and *Sekimoto* came up, and kept this order down the straight, *Mohstok* winning by a good length. Time 48 secs.

5. THE WELTER PLATE. Value $50. For all Ponies, being *bonâ fide* hacks. Winner of the Hurdle Race and of number 9 on the second day excluded. Weight twelve stone. Entrance $5. Half a mile.

Mr. Lyon's *Kickapoo* (late *Kanagawa*), 10st. 8lbs.	1
,, Smith's *Cupbearer*, 10st. 8lbs.	2
,, Eato's *Oscola*, 10st 5lbs	3
,, Hugo's *Escritoire*, 10st. 2lbs.	0

Only *Dunsport* failed to appear at the post out of all the entries. *Cupbearer* started off with the lead and at once put a long distance between himself and those following, *Kickapoo* coming away from the others to make a second at a long interval. On entering the straight *Cupbearer* showed signs of distress and allowed *Kickapoo* to come up on the outside rail, and finally win by two lengths. The winner was ridden by his owner, and the success of the representative of the *Tennessee* was received with loud cheers, the gallant officer being carried to the stable, after weighing in, on the shoulders of his friends. Time 69 secs.

6. THE CONSOLATION. Value $100. For all beaten China Ponies at this meeting. Weight for inches. Entrance $5. Once round and a distance.

Mr. Earnest's *Trustee*, 10st. 8lbs	1
,, Fairplay's *Nibon kin*, 10st. 5lbs	2
,, Sinbad's *The Minister*, 10st. 5lbs	3
,, Fairplay's *Sate*, 10st. 5lbs	0
,, Whitney's *Sovereign*, 10st. 11lb	0
Lady Fox's *Antidote*, 10st. 8lbs	0

There was one false start, when the *Minister* and *Antidote* were only stopped with difficulty. When a proper start was effected *Sate* took the lead and keep it to the five furlongs, all but *Antidote*, who was far astern, lying about four lengths behind the leader, whom they joined at the trees. *Nibon kin* led down the straight and looked like winning, but the rider of *Trustee* brought his pony up gallantly, and just on the post beat *Nibon kin* by barely a head. This was a capital race. Time, 2 m. 42½ secs.

7. THE SOLACE.—Value $100. For all beaten Japan Ponies at the meeting. Weight for inches. Entrance $5. Five furlongs.

Mr. Ola's *Lodi*, 10st. 4lbs.	1
Count Tristan's *Daimio*, 10st. 6lbs.	2
Mr. Alexander's *Luck's all*, (late *Tornado*) 10st. 2lbs.	3
,, ,, *Griffin*, 10st.	0
,, Robertson's *Doctor*, 10st. 6lbs.	0
,, ,, *Othello*, 10st. 8lb.	0
,, ,, *Moor*, 10st. 2lbs.	0

Seven appeared at the post and got off to a wretched start, by which *Luck's all* was left ten lengths behind. *Lodi* rushed off with the lead, which he kept throughout, beating *Daimio*, who came up from the rear and made a splendid effort at the distance post, by a length and a half. *Luck's all*, ridden by a Japanese jock, was a good third. Time 1 m. 24 secs.

8. THE SILK CUP.—Value $165. A Handicap for all Ponies. To be handicapped by the stewards at the close of the second day's racing, when entries will be received. Winners of Nos. 2 and 3 of this day excluded, and winners of any other race after the publication of the handicap 3 lbs. extra. Entrance $10. One mile.

Mr. Sinbad's *The Judge*, 11st. 2lbs.	1
,, Robertson's *Mandarin*, 11st. 7lbs.	2
,, ,, *Dibs*, 12st. 10lbs.	0
,, Whitney's *Sceptic*, 11st.	0
,, Robertson's *Tom Wheeler*, 10st. 2lbs.	0
,, Alexander's *Luck's all* (late *Tornado*) 10st.	0

Luck's all, *Tim* and *Mandarin* led off together, and at the bottom of the hill *Mandarin* took a decided lead which he increased to one of several lengths by the time he had reached the 5 furlongs, his jockey evidently riding his pony out all he could. *The Judge* was second, and at the trees began to close up to the leaders, followed by *Dibs*. The race should have been *Mandarin's*, but his rider failed at the finish and allowed *The Judge*, who was very well ridden, to pass him and win by a neck. The weight evidently told on *Dibs*, who passed the post third, having been pulled up when further effort was useless. Time 2 m. 20½ secs.

At this meeting, which was as successful as could have been expected considering the unfortunate division of the racing community, H. E. Don Marino Alvarez and Mr. J. F. Lowder officiated as Judges, and Messrs. Bayne and Barnard as Starters.

Correspondence.

DR. HEPBURN'S DICTIONARY.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, November 17th, 1876.

SIR,—Will you allow me to thank Mr. Bramsen for his, no doubt well-meant criticism of some of the errors and inconsistencies which he has found in my Dictionary, and published in your last issue. These errors were brought to my notice by a friend soon after the publication of the abridged edition. I regret much not to have seen Mr. Bramsen's notice of them in the *North-China Daily News*, else they should have been corrected. It is quite impossible for me to account for them getting in originally, except it be from the want of proper care.

The measurement of the *go*, as given under that word, is that of the *go-go*, or five *go* measure; it must have have been through entire inadvertence that it was written there—an error quite inexplicable, but sufficiently mortifying.

A *Tan* means simply a piece of cloth, its length is not, I believe, fixed, but varies, according to the kind and quality of the cloth, from 25 to 30 feet or even more. A *Hiki* is two *tan*; my error was in not inserting the word *about* before 52. The only serious error is in the measurement of the *go*, and in saying that a *fun* = 16 grs. troy.

Some of these values I obtained from others and considered them sufficiently reliable at the time, and did not take the pains of verifying them. But since the publication of the abridged edition, and my notice was called to this matter, I have made observations for myself, and perhaps it would not be uninteresting to state them here.

The *momme*, according to a pair of very delicate scales, I make to be equal to 57 grs. troy, consequently the *fun* would equal 5.7 grs., and the *rin* .57 grs., or a little more than half a grain.

The *go*, bearing the Government stamp, measures just 2.50 inches square by 1.75 inch deep, and consequently contains 10.9375 cub. inches. The *sho* would then be 109.375 cub. in., the *to* 1093.75 cub. in., and the *koku* 10937.50 cub. in. According to this, the *koku* equals 39.447 imperial gallons, or 4.93 bushels, or a little less than 5 imp. bushels, and the *to* a little less than half a bushel.

These values are all based upon the measurement of the *go*. Perhaps if they were deduced from the measurement of larger measures, as the *sho* or *to*, the result might vary a little. The above mode of ascertaining the capacity of these measures is, I think, the most correct.

I am, Sir,
Truly Yours,
J. C. HEPBURN.

With regard to the failure of the Nares Polar expedition which it was our disagreeable duty to communicate late week, we expect to hear when the details arrive that insuperable difficulties like those which preclude all approach to the South Pole, were found to exist at the North, somewhere beyond Smith Sound. This much at any rate is clear,—the expedition failed from no want of means for prosecuting the enterprise, still less from any want of intelligence or pluck on the part of the commander, officers, or men.—*Celestial Empire.*

Notes of the Fortnight.

IN H. B. M.'s PROVINCIAL COURT.

Before H. S. WILKINSON, Esq., Acting Law-Secretary.

and

Messrs J. Cocking, J. A. Stewart, W. H. Talbot, W. Black and G. Booth, as jury.

Tuesday, November 14th, 1876.

COPELAND and WIEGAND *vs.* J. W. HALL.

(Continued from Wednesday, 8th instant.)

Mr Kirkwood appeared for plaintiffs; Mr Dickins for defendant.

When the names of the jury were read, Messrs Booth and Black failed to answer, but it was agreed to go on with the case in their absence. The Court order both to be fined $10.

Mr Dickins said that before going further he begged to state to the Court that as the matter had been arranged amicably between the parties out of Court, he would call upon his learned friend to join him in asking that a juror he withdrawn.

Mr Kirkwood said that he had no objection to the case being withdrawn, as he believed that the matters in dispute had been arranged out of Court, but it was only late last night that he was informed of this, and under the circumstances he could not refrain from commenting on the conduct of his learned friend, which he considered most reprehensible, for he had undoubted evidence that his learned friend had, since the adjournment, had conferences and communications with his client without his (Mr Kirkwood's) knowledge.

Mr Dickins denied having done so. Mr Kirkwood then produced a letter addressed to his client by Mr Dickins, which was headed "private," and asked his Honour if he should read it.

His Honour ordered it to be read.

The letter in question was headed "private" and ended with the postscript "This note is strictly private," but only referred to a settlement of the dispute, stating terms, etc., and in it Mr Copeland was asked to put in writing his propositions with regard to the settlement of this case out of Court, about which they had had some conversation.

Mr Dickins to Court:—I acknowledge that letter, but can see nothing wrong in it. Mr Copeland was my client.

Mr Kirkwood:—But not in this action.

Mr Dickins:—He was formerly my client and surely I can write to him if I choose. I told him that he must let Mr Kirkwood know of this arrangement, and I am not to blame if he did not do so.

Mr Kirkwood:—In this letter you say "let Mr Kirkwood know when the arrangement is finally made."

His Honour, to Mr Dickins:—Your conduct in this matter is most unprofessional.

Mr Dickins: (rising to explain)—It is a highly proper proceeding.

His Honour:—I don't want to hear any more about it; I have given my opinion.

Mr Dickins:—Your Honour, I wish—

His Honour:—I tell you, Mr. Dickins, I do not want to hear any more on the subject, sit down.

Mr Dickins:—No, I prefer to stand, but—

His Honour:—Mr Dickins, you know I have the right to demand that you sit down. Disobey me if you dare.

Mr Dickins:—I will not hear my conduct, which was quite professional and according to etiquette, reprimanded unnecessarily.

His Honour:—Will you sit down, Mr. Dickins? I insist on your sitting down.

Mr Dickins:—No, I shall not.

His Honour:—I again request you to sit down; and you know that I have the power to compel you to sit down.

Mr Dickins:—You have not.

His Honour:—I insist on your sitting down Mr Dickins. If you do not, I must ask you to leave the Court. I am sorry more of the Bar are not present, as they would support me.

Mr Dickins now divested himself of wig, gown and bands, saying, "I now appear as a private person and address the public through the reporters and not the Court."

(Mr Booth, one of the absent jurymen now made his appearance and in apologising to the Court said he had mistaken the time. His fine was withdrawn.)

His Honour to Mr Dickins:—Do you or do you not appear for Mr Hall?

Mr Dickins:—I have nothing to say to your Honour.

His Honour repeated the question and Mr Dickins repeated the answer, having nothing more to say.

His Honour said he had reproved Mr Dickins' unprofessional conduct as a barrister.

Mr Dickins said he did not appear as a barrister, but as a solicitor. His Honour had not heard half that he had to say, and spoke quite prematurely.

His Honour:—You had plenty time to state what you wished to say, but I maintain that your conduct is reprovable. I will again listen to you after you resume the usual costume of the Court.

Mr Dickins, after some persuasion, again resumed his professional dress, and said:—I understand from my client that the case has been settled and now only ask that it be withdrawn from Court.

Mr Black, the other juryman, now appeared, and apologised to the Court, saying he had been misled by the report in one of the evening papers that the case had been withdrawn.

His Honour said he had no business to pay any attention to newspaper reports. They were highly incorrect and not to be relied on. He, Mr Black, had been asked to appear at a certain hour and should have done so.

Mr Dickins said he had not given authority for publishing the report in question. Mr Kirkwood said he knew nothing about it.

His Honour then said:—I have now entered in the records, with the approbation of both parties that "it is agreed between Mr Dickins and Mr Kirkwood that a juror be withdrawn, as an amicable arrangement has been arrived at between plaintiffs and defendant out of Court.

A juror was withdrawn accordingly and the jury discharged.

IN H. B. M.'s SUPREME COURT FOR CHINA AND JAPAN.

Before C. W. GOODWIN, Esq., *Acting Chief Judge.*

W. P. MITCHELL, *Appellant*, and NAKAJIMA SAISUKI, *Respondent.*

Mr Kirkwood appeared for the appellant, and Mr Ness for the respondent.

Mr Kirkwood said that this was an appeal from the decision of Mr Consul Robertson on the grounds stated in his petition of appeal, which were four in number, and were these: (1) That he was disallowed to amend his answer at the commencement of the hearing; (2), that Mr Mitchell was excluded from the Court during a part of the hearing; (3), that certain evidence, which he contended was admissable, was rejected; and (4), that the verdict was against the weight of evidence. He stated that he desired to show that there was a verbal agreement entered into before the written agreement was made that the promissory note therein mentioned was negociable, and he considered it was contrary to the rules of the Court to have refused such an amendment. On the question of Mr Mitchell's exclusion, he stated that he had been put about by his client's absence from Court, and cited authorities as to the right of a party to the cause to be present. He then discussed in detail the questions which were disallowed as being verbal evidence tending to vary a written document; quoted several cases, and contended that a considerable number of them, at least, should have been allowed. He said the question was: How stood the contract on the 25th May, and who broke it? The contract of the 20th, which was the original, stipulated the delivery by appellant of 15,000 cases; but was modified on the 22nd to the effect that the cases should be delivered in two lots. The weather on the 22nd was so boisterous that only 500 cases were landed, but on the 23rd, 2,000 were put on the hatoba. These Nakajima agreed to take delivery of on the same day and pay $2,000 down. He did neither, however, and the goods remained on the hatoba during the ensuing night under the care of Chipman, Stone & Co.'s watchman. On the same evening Nakajima entered into a written agreement, promising to pay before 9 a.m. next day $2,000, and take delivery of 2,000 cases. He did not have the money on the 24th, and did not take delivery: but afterwards entered into a sub-contract with one named Mano, from whom he received $2,000, and to whom he ceded the 2,000 cases on the 25th. He paid the $2,000 over to Mitchell, but who could expect to receive 2,000 cases, worth over $5,000, for $2,000 only? His client also asked for the negotiable security of Sawa, but Nakajima refused to give this until he received the whole of the 15,000 cases as originally bargained for. Mitchell found on the same evening that this security had not yet been given, although when Nakajima afterwards placed his affairs in the hands of Mr Ness it was forthcoming. It was evident that security ought to be given for the balance of the value of the 2,000 cases, although this security was not mentioned in the last agreement which modified the original contract. His client was undoubtedly in a position to fulfil the agreement of the 25th May by giving delivery of 2,000 cases. It was the want of this security on the part of the opposite party which prevented him from fulfilling the agreement.

Mr Ness then addressed the Court for the respondent. He said that after listening to everything that had been urged for the ap-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

pellant, he considered the appeal as inexcusable from every point of view. Had the appellant not been a pauper, and had a reversal of the judgment been of any value to him even if obtained, an appeal would have been justifiable only if a glaring injustice had been done him by the lower Court. He would briefly review his learned friend's reasons for appeal and his arguments thereon, in the order in which they had been presented. It was complained that he was not permitted to amend his answer at the hearing by the insertion of a clause alleging that there was a condition precedent to the written agreement, that the promissory note therein mentioned should be negotiable. This application was properly refused as it would have been a surprise, and it was adding to a written contract. Had the amendment been admitted, the answer would have become demurrable and the evidence upon it would have been rejected under the rules of evidence, but it became needless to consider now whether the application was rightly or wrongly entertained. The province of this Court was to say, whether, looking at the present complexion of the case, the evidence would have been admissable to support his amendment; and could the judgment have been otherwise than it was. In respect that it is admitted by the appellant in his evidence that the only contract between the parties consisted of the four written documents put in, and in respect that the contents could not be varied by parole testimony, the evidence about the negotiability of Sawa's note must have been excluded; and by excluding reference in answer to what could not have been introduced at the hearing, the appellant, of course, could and did suffer no harm.

The appellant's second ground of appeal, viz., that he suffered harm by his seclusion from Court during the first day could scarcely be considered serious. It contained an implication that he would have framed his evidence from the statements of his opposing witness, and that he was not there to relate the simple facts as they occurred. If he could have suffered from seclusion in an ordinary case, he could and did not in this, for the hearing lasted five days and he had ample opportunity of perusing the evidence given on the first day in the newspapers, and also of conferring with counsel. Apart from the reasoning which is conclusive, that he sustained no harm in this respect, the law is express in stating that it forms no ground of appeal if the seclusion is submitted to at the time, and the rules of this Court do not interfere with the operation of the law and practice at home, which empowers the Court to order a party to leave the Court.

The third ground of appeal is the only one worth a moment's consideration from the Court, viz., that there is error in law in certain rulings of Mr Consul Robertson, with respect to the reception of certain evidence at the hearing; but an examination of the facts and the law will speedily dispel this also as a valid reason for appeal. In each and every case the ruling followed strictly the well-known rule that no parole testimony is admissable to vary or add to a written document. This principal is admitted by the other side, and they endeavour to avoid its effect by alleging that another principle should operate which admits evidence of a collateral parole agreement. The evidence, however, negatives the existence of a collateral agreement, and shows that the four documents before the Court constituted the only contract entered into, and these were mere reductions into writing of verbal agreements previously arrived at. He contended that the only contract existing on the 25th was that of the 20th as modified by the paper of the 25th. His learned friend desired to add to it a verbal agreement about the guarantee. Such an agreement would add to the written one and must be excluded. Besides, the facts showed that it never existed.

Mr Ness here reviewed the evidence on this point, remarked upon Mr Mitchell's conduct as inconsistent with the existence of such an agreement, and upon the curious coincidence that all the supplementary agreements were silent about it, while the only one alleged to refer to the guarantee was lost. He then pointed out that the breach occurred because of Mitchell's inability at any time to purchase the goods he agreed to sell. That instead of delivering the goods on payment of the purchase price by Nakajima, he had to get possession of the purchase price to enable him to buy and then deliver. He commented upon the circumstances under which the $2,000 payment was obtained, and said he was surprised that the appellant should, in the face of such evidence, have taken steps to call the attention of a higher Court to a line of conduct in reference to this contract which must bring down upon him the severest censure, and he, Mr. Ness, demanded that the appeal be dismissed.

Mr Kirkwood replied briefly in support of his causes of appeal. As to the first verbal agreement, he maintained that it only added a term to the written one of the 20th, viz., that the security should be negotiable, and the verbal did in no way contradict the written agreement. The later written agreements were only *ex parte* memoranda of agreements. The real agreements were verbal ones. Until the jury knew what these agreements were, how could they judge whether they had been broken or not, or by whom? On that point alone, he considered that he was entitled to a rehearing of the case.

Judgment reserved.

THE BRITISH ASSOCIATION ON SPIRITUALISM.

(The Spectator.)

The excited discussion on Spiritualism in the British Association is a remarkable evidence both that there is a yearly increasing number of persons who have really proof, or what they think proof, of the existence of very curious and unexplained phenomena seeming to indicate the action of unseen intelligence, and also that there is something in these phenomena of a troublesome and ambiguous character, often connected with fraud, and still oftener, perhaps, with unconscious self deception. We are quite sure of one thing, —that the investigation into phenomena of this kind has hardly ever been attempted without disclosing a number of very bewildering conditions, and that the greater number of thorough-going spiritualists are far too easily convinced of the reality of so-called facts, which might just as easily be produced by fraud as by unknown causes. Whether there be not a residuum of real fact which, as Mr. Maskelyne appeared to admit, in the letter which Professor Barrett received from him and communicated to the British Association on Tuesday, is really beyond explanation by any causes at present admitted by scientific men, is another question. And so far as we are able to judge the matter, we are strongly inclined to believe that there is. Almost all educated men who have looked into the subject have come across phenomena in the circles of their own friends, without going to professional mediums at all, which cannot be explained by the hypothesis of either fraud or self-delusion. Such, perhaps was the case of the young girl mentioned by Professor Barrett as within his own experience, in whose presence, even when in the open air, raps occurred, capable of answering any question within the child's own knowledge, but no others apparently, and this "when every possible source of deception was removed." And it is only the more probable that this case was genuine, that according to Professor Barrett, the phenomena, after reaching a maximum, died away gradually just when curiosity was most aroused. Indeed, nothing is so probable, on the ground of general presumptions, as that the disappointment which the failure to produce these abnormal phenomena when they are most desired produces, has often led to the frauds by which they are unquestionably very often accompanied.

Lord Rayleigh and others described the very curious phenomena,—also described in the *World* of last week,—witnessed in the presence of Dr. Slade, an American gentleman, who is at present in this country, and of whom the present writer may say that the phenomena which occurred in Dr. Slade's room in broad daylight seemed to him wholly inexplicable on any recognised principle of modern science. A crumb of slate-pencil, confined between a common school-slate and the table, writes, or appears to write, long messages on the under-surface of the slate when held down to the table by the sitter's hands, as well as the medium's. The writing is indeed throughout distinctly *heard*, as well as afterwards read. At the same time, it is only fair to say that there are certain "test-conditions," as they are called, of which Dr. Slade openly declares that they are fatal to the phenomena. For instance, on one occasion the present writer took a double slate, fitted with a patent spring lock, and proposed to Dr. Slade to place the crumb of slate-pencil with which the messages are written inside this slate, and then close the spring-lock. To this Dr. Slade made no objection, but said at once that he did not believe the writing would appear,—that he regarded the conditions of the ordinary séance as quite sufficient, and that the intelligences which governed him would have nothing to do with locked, or chemically-prepared, or otherwise doctored slates, such as had been often brought to him in America,—not without obtaining the results, but without in the least satisfying the bringers that there was no trick in the matter. Nor, as a matter of fact, did any writing at all take place in the locked slate. Now, if tests of so very simple a kind are objected to, it is quite certain that the doubts of the public will continue. As far as the present writer could judge, there was no room for fraud about the mode in which the writing on the other slates was produced. And no man's

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

manner could be simpler or less open to criticism than Dr. Slade's. Still, why should either visible or invisible agencies object to a simple test, if truth be the only object? Dr. Slade does not object to his visitors looking under his table, holding the slate for themselves, holding his own hands, or touching his own feet so as to be sure that he is not using them. He does not object to his sitters taking their own slates. The present writer got two messages on a double slate, bought on his way to to the séance. Why should Dr. Slade,—or the invisible agencies by which he believes himself to be directed,—object to the very simple additional guarantee of a lock on the slate, to preclude altogether that happening which he invites all his visitors to satisfy themselves does not happen? It does not seem a reasonable attitude to say,—'Take your precautions against being deceived up to a certain point, but just at the point at which all the world would probably be satisfied you must stop?' The world will, no doubt, reply,—'The only thing worth guarding against at all is exceedingly skilful deception,—we could guard against ordinary deception by ordinary vigilance. But if ever or whenever there may be a man who can do without apparatus what Maskelyne and Cooke do with apparatus, in his case we want better guarantees than those of common vigilance and precaution,—we want to be guarded against the deficiencies of our own senses, and if the phenomena stop short of those which would convince us that we are so guarded, we should prefer distrusting our own quickness of vision, or hearing, or both, to believing that there is a new and invisible agency at work. For if there be such an agency, surely it should not be, and according to your own evidence need not be, stopped by a patent lock.' Nor do we see what answer could be given to such reasoning. Dr. Carpenter is quite right in saying that before any scientific man acquiesces in the reality of these phenomena, he should take pains to guard himself against his own deficiency in observing power. Nothing can be more astounding than what occurs, or seems to occur, in Dr. Slade's presence, unless it be that an invisible agency which can do so much, should really object to the imposition of an additional and very obvious precaution against illusion. Our own impression is that what happens in Dr. Slade's room is marvellous in a very high degree, but that it would be even still more marvellous that any intelligence capable of producing it should take offence at a patent lock. Doubtless it is not pleasant to a man's—and it may be equally unpleasant, for anything we know, to a spirit's—pride, to have precautions taken against any feat of legerdemain. But then the very essence of the whole question here is precaution. If you took no precaution at all, there would be no marvel at all. If, for instance, Dr. Slade were to absent himself with his slate for five minutes after each question were asked, and then to return with the answer, there would be no wonder to explain. The wonder is that when a blank slate is held down on the table by your own hands, you hear the writing begin and finish, and that when the slate is held up a long message is there. The wonder would be increased doubtless by shutting a spring lock on the slate, but only because that precludes the possibility of the sort of manipulation which,—as one is told,—Messrs. Maskelyne and Cooke can so perform that a man makes the blunder of confusing what he has really seen with his own eyes with what he has only inferred,—perhaps quite falsely,—that he has so seen. If we may not guard ourselves against our own deficiencies of vision, we have just as much reason for explaining a marvel by conjecturing that we have been deceived, after all, in spite of all our effort to be vigilant, as by admitting a new agency, which is the very point in question.

The result seems to us to be that unless the medium, or the spirits, or whatever they be, will grant full "test-conditions," investigators ought not to be convinced. It is just as reasonable an explanation to say, 'I was a fool, and did not use my own faculties well,' as to say, 'An invisible agency was really at work.' It is very likely that the tests which Dr. Carpenter wisely demands will often fail, even where there really were phenomena to explain which are not explicable on hitherto known laws. As far as we can judge, some very strange phenomena do occur with great capriciousness in the presence of people of particular organisations, but when they come to be looked for, they very often disappear. Still, though it is no sufficient reason for rejecting the reality of these phenomena that they fail to occur just when the tests are ready which would prove them to be true, it is clearly no reason for believing them. And whenever simple and reasonable tests are declined, the effect must be, and ought to be, to render the investigator distrustful of what he has seen, or appeared to see, when the tests were not present. After all, what he has to determine is how far he can trust himself. If he finds that what occurs under circumstances in which he can trust himself absolutely and completely, is much less wonderful than what occurs when he is half-distrustful of his own observing power,—or even not wonderful at all—the humiliating conclusion that he himself is a bad observer is a more probable one, than that he has discovered an invisible agency denied by most men of science. We agree, however, entirely with Mr. Crookes that if the test-conditions are really satisfied, it is pure superstition to reject the results just because they do not hang together with the principles of modern science. But is not the locking of a double slate a fair and reasonable test of such phenomena as those which occur with Dr. Slade?

PROTECTION IN THE UNITED STATES.

(The Economist.)

A prolonged and rather unprofitable controversy has been carried on in the *Times* as to the limits to which Protection in the United States is likely to be carried, and the probable consequences, in the long run, of the system which the manufacturers of America have built up. Captain Galton, who has lately been visiting the Philadelphia Exhibition, was greatly impressed with the astonishing results there displayed of the progress of the manufacturing industries of the Union within the past twenty years. It is stated by Captain Galton, and confirmed by other witnesses, that the advance upon what was possible before the Republican party came into power, and Protection was accepted as the official doctrine of the American Government, is almost beyond belief. It is certain that at Philadelphia the representation of American industry outshone the inadequate exhibition of English and other European manufactures, and it is probably time that the mechanical genius and the commercial instincts of the American people, working in combination, have actually approached, and threaten to equal, the most admirable industrial efforts of the Old World. Captain Galton goes so far as to assert that British manufacturers have hopelessly lost their hold upon the markets of the United States. Other observers go further, and picture the disastrous consequences of the removal of protective duties in America, which will bring American manufacturers into ruinous competition with us, we are told, in the open markets of the rest of the world. We think that all these apprehensions are either absolutely unfounded or grossly exaggerated. They point to an unsteadiness of conviction in the minds of the industrial classes in England, which would be dangerous were there ever to be—which is quite possible—a foolish democratic outcry among the English working classes. Such fears may possibly do some good by making our manufacturers perceive the truth—already sufficiently obvious—that the industrial supremacy of this country cannot be preserved without continual efforts to improve the quality and cheapen the cost of manufactured articles; but they are much more likely to do mischief by suggesting impracticable or ultimately ruinous remedies.

What is the actual state of the case in the United States? American industries have vastly improved in the character of their products, and as this improvement has gone on under a Protective system, those products have, by degrees, forced themselves upon the American markets to the exclusion of European commodities. Protection made the latter artificially dear, and as in time the American manufacturer began to produce something which could fairly stand comparison with the European, and which, though costly also, was not so costly as the European article, weighted with the duty, had become, the state of things came about on which Captain Galton looks with admiring amazement, and the representatives of some English industries with undisguised dismay. But what has been the result to the American manufacturers themselves? They may command their own home markets, but they do so at something approaching to an absolute loss. Protection has been followed by excess of competition and by overproduction, almost unparalleled, it is said, in the history of trade. To this is attributed the present prostration of the leading American industries. This would not seem to furnish any very striking arguments in favour of the Protective system; but the fears of the manufacturers, who write in doleful language to the *Times*, use the very failure of the system as a proof that having done the maximum of mischief to English industry in one way, the policy of the United States will now be turned about, and will do an equal or greater injury in the opposite direction. It is argued that the American manufacturer, unsuccessful as he has been in making large profits of late years, has succeeded at any rate in doing two things—in beating England and Europe out of the American markets, and in placing American manufacturers, at least, on a level in point of excellence with those of Europe. The latter fact, we are assured, will be proclaimed to the world by the Philadelphia Exhibition, and the world will be ready to receive

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the information eagerly. But the American manufacturers, already able to lower their prices by the diminution in the rate of wages, will be still more relieved by the operation of the late crisis, which has transferred factories and machinery into new hands at a comparatively trifling cost. The manufacturer who has come into possession of his buildings and plant at one fourth of the original outlay, and who pays his workmen 40 per cent. less than he would have been obliged to pay them four years ago, is plainly so much the better able to enter into competition on the ground of cheapness as well as of quality. Why, then, should he not compete abroad as well as at home? Why should not American manufacturers challenge the supremacy of English in the markets of continental Europe, of the East, and even of our own colonies? This prospect, it is said, is tempting the American manufacturers to the side of Free trade. They find that the tariff which doubtfully protects them at home, for prices artificially raised are devoured by competition and over production, prevents them from entering into anything like equal rivalry with England abroad. This conviction, according to some shrewd observers, has given the death blow to Protection, and Free trade will soon, we are told, be the accepted policy of the American Government. Then we shall find that America will step forward as a formidable competitor in every foreign market, and if we do not take care we shall find it hard to hold our own.

By all means let us take care, but, in truth, if we cannot hold our own in the condition stated, we deserve to be beaten. The course of events indicated is precisely what we have always contended the question of the tariff in the United States would develop. There, as elsewhere, we felt certain that the over impatience of consumers against high prices would never make Free trade a political question of the first order; but that when the producers themselves began to feel the system pinch them the solution would soon be reached. If it should be, we have no fear of the industrial pre-eminence of England. Granting that the Americans have made progress astonishingly in the last twenty years, we have the traditions and the habits of a period ten times as long, and our national energies have not assuredly lost their elasticity and adaptive power. It is absurd to suppose that the present "shrinkage" in the value of American factories and machinery can be taken as a permanent element in the competition between the manufacturers of the United States and those of the Old World, and still less justifiable is it to count upon the recent fall in wages as a lasting deduction from the burdens on American industry. As yet the Americans have never been able to stand up before us in the open field of competion, and the conclusion that they will be able to do so, because under Protection they have improved production and got the command of their own markets, is a wholly illegitimate inference.

OUR PLACE AMONG INFINITIES.*

(The Spectator.)

No popular writer on astronomy succeeds so thoroughly as Mr. Proctor in conveying to our minds an idea of the vastness of Creation, the portion of the subject which he now brings before us being our own infinite littleness. Not the littleness of individual man, with his short span of life and comparatively futile powers, but our aggregate littleness, as shown by the mere speck which represents our planet in the immensity of space, and the vast extent of time during which that planet existed in an uninhabited state, as well as the probably immense duration of its existence after we shall have ceased to be. Such is in brief the matter treated of in the series of essays comprising this volume, the first lecture, "The Past and Future of our Earth," being, as it were, the key of the whole position. In his opening pages Mr. Proctor at once disclaims the association of his subject with religious questions, because as "science deals with the finite, though it may carry one's thoughts to the infinite," he considers it impossible to learn from it anything of the infinite attributes of an Almighty Being. Such teachings, in fact, come entirely within a different province, so that while science is by no means incompatible with them, it is altogether a different branch of study, and without detriment to the former, "we may," as Mr. Proctor says, "proceed to inquire into the probable past and future of our earth as calmly as we should inquire into the probable past and future of a pebble, a seed, or an insect; of a rock, a tree or an animal; of a continent, or of a type, whether of vegetable or of animal life;" for, as he truly remarks in another place, "we may be perfectly satisfied that the works of God will teach us aright, if rightly studied."

It is a grand conception which is thus placed before us, and one which, if necessarily based on theory, yet carries with it a strong assumption of probability. Reasoning from analogy, the author first shows us our earth in one of its earliest stages as a "rotating mass of glowing vapour, capturing then, as now, but far more actively then than now, masses of matter which approached near enough, and *growing* by these continued in-draughts from without." At this period the earth was, according to the theory, preparing to become a sun, and this was in all probability her next stage of existence, the Moon being at that time the abode of life, our earth supplying light and heat to the creatures which then dwelt there. After this a process of cooling and solidification, during which the first mountain ranges were formed and oceans and continents evolved, prepared the planet to become the abode of life, first in the vegetable and then in the animal forms; and before these appeared she was, in all probability in a condition, like that through which Saturn and Jupiter are now apparently passing. But what are the time-intervals which were, according to Mr. Proctor, necessary for the production of these changes? Hundreds of millions of years. As he puts it, "Hundreds thousands of years are the seconds of the time-measures we have to deal with." And he says, further on, "Taking as the extremest span of the past existence of life upon the earth ten millions of years, we learn from the researches of physicists that the age preceding that of life (the age during which the world was a mass of molten rock) lasted more than thirty-five times as long, since Bischoff has shown that the earth would require 250 millions of years to cool down from a temperature of 2,000 Centigrade to 200. But far back beyond the commencement of that vast era, our earth existed as a nebulous mass, nor can we form even a conjecture as yet respecting the length of time during which that earlier stage of the earth's existence continued; and Mr. Proctor goes on to show that by the effect of changes which we know to be slowly progressing, our earth must (unless any sudden catastrophe should previously destroy life from off her surface) fall into a condition similar to that of the moon at present, a condition which would not be attained short of a period so distant as to be represented, probably, by hundreds of thousands of years; after which, again, stretches a period of apparent inutility of immense duration, when our planet in its stage of decrepitude will still continue to circle round the Sun.

But wonderful as this may seem, nay, taxing to the uttermost our powers of imagination, it is but a mere introduction to—the veriest foreshadowing of—what is to follow. According to Mr. Proctor, while one orb after another is gradually becoming incapable of supporting life, others, superior in the planetary scale, have been slowly preparing themselves for the same purpose; and if his theory be correct, the longer a planet shall have been in "putting on life," the longer will be the duration of its life-supporting existence; possibly, also, the higher will be the order of beings destined to dwell upon its surface; and this continuous succession of changes will occur until the Sun itself will be the only orb in our system on which life will be possible, and we may look forward to a period, distant almost beyond conception, when it also will be the theatre of busy existence. But the sun itself gives evidence of incessant change. Will life cease to exist when that world, the centre of our system, shall have become worn out, and as effete as its many satellites? No, the end is as remote as the beginning, for both are swallowed up in eternity. Mr. Proctor expresses this so eloquently, that he must be allowed to speak for himself:—

"The end, seemingly so remote, to which our earth is tending, the end, infinitely more remote, to which the solar system is tending, the end of our galaxy, the end of systems of such galaxies as ours,—all these endings (each one of which presents itself in turn to our conceptions as the end of the universe itself) are but the beginnings of eras comparable with themselves, even as the beginnings to which we severally trace back the history of our planet, of the planetary system, and of galaxies of such systems, are but the endings of prior conditions which have followed each other in infinite succession. The wave of life which is now passing over our earth is but a ripple in the sea of life within the solar systems; this sea of life is itself but as a wavelet on the ocean of eternal life throughout the universe. Inconceivable, doubtless, are these infinities of time and space, of matter, of motion, and of life; inconceivable that the whole universe can be for all time the scene of the operation of infinite personal power, omnipresent, all-knowing; utterly incomprehensible how infinite purpose can be associated with endless material evolution. But it is no new thought, no modern discovery, that we are thus utterly powerless to conceive or comprehend the idea of an Infinite Being, Almighty, All-knowing, Omnipresent, and Eternal, of whose inscrutable purpose the material universe is the unexplained manifestation. Science is in presence of the old, old mystery; the old, old questions are asked of her,—'Canst thou by searching find out God? canst thou find out the Almighty unto perfection? It is as high as heaven, what

* *Our Place among Infinities.* By Richard A. Proctor. London: Henry S. King and Co.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

canst thou do? deeper than hell, what canst thou know?' And science answers these questions, as they were answered of old, 'As touching the Almighty, we cannot find Him out.'"

Passing over Mr. Proctor's interesting chapters on Jupiter and Saturn, on Sirius the giant sun, and on the Comets, which he describes as but frail creatures after all, notwithstanding the terror which they have from time to time inspired, we will touch for a moment upon that which treats of "the Star-depths," for here we are not only brought face to face with facts of apalling grandeur, but enabled to realise more completely that which, as we have said before, is the main subject of the entire work,—the infinite littleness of our orb, when compared with the majesty of that portion of the sidereal vault into which we short-sighted mortals are permitted to gaze. In this essay the author wishes to show "that so far from having penetrated the secret of the star-depths, we stand as yet but on the threshold of that mighty domain which belongs to the astronomy of the Future;" and beginning with the fact that the mighty instruments of our day, wielded with all the skill of men of vast experience, have not enabled us to measure the distances of more than a dozen stars, from the nearest of which the earth's orbit of more than 180 millions of miles would be something absolutely inappreciable, he goes on to divide the stars into two chief classes,—leading orbs, like our own sun, of which he supposes millions to exist, or rather, he concludes that the sun is inferior both in size and brightness to the greater number of this class of orbs around him,—and minor stars, more profusely spread through space, through which all move in every conceivable direction and at very different rates. Then he proceeds to show that the number and variety of these isolated stars is as nothing when compared to the wondrous galaxy of the Milky Way, with its marvellous complexity of structure, its stars of every degree of magnitude, and its clouds of nebulous light, which clouds may be, says the author, merely vast depths of nebulous matter, or schemes of stars as magnificent as the most splendid of all the star-clusters descernible with the telescope. Referring to the differences of star-colours, some of which are observable to the naked eye, while the telescope reveals to us shades of blue and green, of yellow, of orange, and of deepest red, he argues a marked difference in the condition of the stars so distinguished, and proves it by divergencies presented by their several spectra, showing the wondrous variety presented by the sidereal firmament; and speaking of the double stars, the pairs of one or two colours, which are distinctly seen, he suggests that they may either be double suns, round which other planets may revolve, or that each component sum may have its own distinct system of dependent world; and he then proceeds to consider the condition of things in those spheres where worlds may circle round the component suns of quadruple or multiple star-systems, where there could be no night at all, save for brief periods at very long intervals. From thence he mounts to the star-clusters, and finds that they all form part and parcel of one and the same scheme, amazing in spendour and sublimity, and asks, in conclusion, "whether we have now better reason than the astronomer had of old time to consider the mysteries of the universe as fully revealed to us and interpreted."

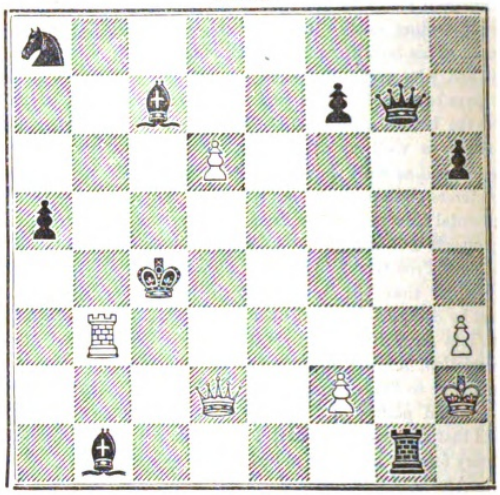
The idea which Mr. Proctor brings before us of seeing wastes in nature is very startling—the Sun, for instance, emitting in each second as much heat as would result from the burning of 11,600 millions of millions of tons of coal; while the heat received by the various members of the solar system corresponds only to that of fifty millions of tons; and all the other suns we see, and the myriads that lie beyond the range of our most powerful telescopes, similarly pouring heat and light into space. What a wondrous expenditure of force and energy is here, showing us that we have but scanned the minutest portion of the work of the Creator, and that all we can ever learn is as nothing! This, then, is the lesson which this book teaches,—our infinite littleness, and the grandeur of the system of which our planet forms so almost inappreciable a part; and it is impossible to read it without having our conceptions enlarged, our humility strengthened and our faith in a Being of infinite power and goodness increased. Mr. Proctor does well not to shrink from inquiries such as these, since they can only tend to raise those who pursue them from a grovelling existence to the reverent contemplation of the highest works of God.

Yellow fever has broken out in Savannah, and deaths are very numerous. Half the population have left the town. A telegram says that on September 20th the sick numbered 8,000. Great distress and destitution prevail, and subscriptions for the relief of the sufferers are being raised throughout the country. Conflicts have occurred between the whites and blacks in Georgia, in which several persons are reported to have been killed.—*Pall Mall Gazette.*

PROBLEM

By Mr. S. Lloyd.

BLACK.



WHITE.

White to retract his last move and mate.

What was the move, and how could he have mated?

Solution of Herr Kohtz's Problem of last Week.

1. Q. to K.'s sq. Q. takes Q.
2. Kt. to R.'s 5 mate.

---

2. Kt. to K. B.'s 6 mate. *a.* K. takes R.

---

2. Kt. to Q.'s 6 dis. ch. mate. *b.* Q. takes R. (ch.)

---

2. R. mates. *c.* Q. takes R. at B.'s 4.

Correct answers received from W. B. M.; G. E. G., and W. H. S. of Tōkiō, Tesa and Delta of Yokohama.

The solution received from Shogi is not correct, and we would recommend him to solve the problems before he attempts to criticise them.

JNO. W. HALL, No. 67.

Tokio, November 18, 1876.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, Henry Allpass.—To the Proprietors of Norton's Camomile Pills."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Great dulness continues to prevail in our market and transactions have been of a very limited nature. The enquiry for *Yarns* and *Shirtings* has almost ceased, and nearly all deliveries are on account of former contracts to arrive. The current medium seems to be very scarce with native buyers, and this, combined with the general stagnation, causes clearances to be of a slow and unsatisfactory nature. There is more or less dulness in the enquiry for other cotton goods, and the quotations following may be considered nominal.

Grey Shirtings:—							
7 lbs.	38½ yds	39 in.	per pce.	$1 60	to	$2.10
8 lbs.	38½ yds.	44 in.	,,	2 00	to	2 50
8 lbs. 4 to 8 lbs.	38½ ,,	39 in.	,,	1 80	to	2 50
9 lbs.	38½ ,,	44 in.	,,	2 40	to	2 85
T. Cloth 7lbs.	24 ,,	32 in.	,,	1 45	to	1 70
,, 6lbs.	24 ,,	32 in.	,,	1.20	to	1 30

White Shirtings:—						
60 to 64 reed 40 yds. 35 in.	per pce.			2.20	to	2.40
Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb.			0 77½	to	0 97½
Black Velvets				8.25	to	9.25
English Drills 15 lbs. 40 yds, 30 in.				2.70	to	2.90
Taffachelass 13 yds, 43 in.				2.00	to	2.40

Yarns.—

No. 16 to 24	per picul...	$30 50	to	34 00
No. 28 to 32	per picul..	$31 00	to	38 50
No. 38 to 42	per picul...	$39.00	to	42.00
Reverse Twist 16-24	,, ...	$33.00		

Woollens.—The market for this staple has been very quiet since our last, principally owing to the disturbed state of the country having caused buyers from the interior temporarily to cease purchasing, so that quotations given below must be considered quite nominal; but as satisfactory news has been received of the suppression of the rebellion in the south, we confidently look for a change for the better before long.

Plain Orleans	40—42 yds.	32 in.	5 55	to	7.00
Figured Orleans	29—30 yds	31 in.	4 25	to	5.75
Shimagoro	30 yds.	30 in.	4.50	to	5.50
Italian Cloth	—30 yds	32 in.	0 25	to	0 37½
Camlet Cords	29—30 yds	32 in.	5 75	to	6 00
Camlets Asstd.	56—58 yds.	31 in.	16 50	to	17 50
Lastings, Japan	22—30 yds.	32 in.	12 00	to	13.00
Plain Mousseline de Laine	—30 yds.	30 in.	0 18½	to	0.19½

Figured Mousseline de Laine	30 yds.	30 in...	0.27	to	0.32
Multicolored ,,	30 yds.	30 in...	0.30	to	0.40
Cloth, all wool plain or fancy	48 in.	to 52 in...	0.80	to	1.20
Presidents	54 in.	to 56 in...	0.75	to	0.80
Pilots	54 in.	to 56 in...	0.45	to	0.60
Union	54 in.	to 56 in...	0.60	to	0.75
Blankets, scarlet & green	6 to 8 lbs.	per lb ...	0.42	to	0.48

Sugar.—Since our last report our market has shown no activity, though there has been a fair enquiry for *White Sugars*. Holders have been unwilling to sell in hopes of an advance in rates taking place, but recent heavy arrivals rather tend to make the market quiet for all classes of sugar. Stocks at date are 20,200 piculs of *Formosa* kinds, and 25,000 piculs of *China* kinds.

Sugar:—Takao in bag	per picul...	$4 05
,, in basket	,, ...	$3 75
Taiwanfoo in bag	,, ...	$3 85
do. in basket	,, ...	$3.55
China No 1 Ping-fah	,, ...	$7.70
,, No. 2 Ching-pak	,, ...	$6 80
,, No. 3 Ke-pak	,, ...	$6.10
China No. 4 Kook-fah	per picul...	$5.50
,, No. 5 Kong-fun	,, ...	$5 00
,, No. 6 E-pak	,, ...	$4.20
Swatow	,, ...	$3.30
Daitong	,, ...	$3.50
Japan Rice	$2.30	to $2.35
Kerosene Oil	$3.80	to $4 00

Kerosene Oil.—The market is without change, with fair demand for consumption.

EXPORTS.

Silk.—Our fortnightly report dated 15th instant was to the following effect:

Under the influence of advices from Europe, which, often conflicting but still more or less alarming, have imported to transactions an extremely fitful character, prices had receded last week nearly $100, when a more general demand turned the scales in favor of buyers. The present quotations, however, show a fall in laid down costs of nearly 20 per cent. from the highest point reached in the middle of September.

Settlements since the 26th ultimo are 800 bales of Hanks, and 400 of Oshius and other sorts. The supplies of fine Hanks are well nigh exhausted, and the stock, estimated of 3,000 bales, is for the most part composed of Oshius.

The shipments for the fortnight are 1,049 bales, making the total export since the 1st July 15,929 bales, against 7,106 last year for the corresponding period.

	At Exchange 4/2 in London.	*At Exchange 5.25 at 6 m.s. in Lyons.*
Hanks.—Extra to No.	$880 nominal	32/1 89
,, Best No. 1 & 2	$830 to 850	30/4 to 31/1 84 to 86
,, Good No. 2	$810 to 820	29/6 to 30/ 82 to 83
,, Medium No. 2½	$780 to 800	28/3 to 29/3 78 to 81
,, C'mon. No 3 (,, Inferior No 4 & 5)	$700 to 750	25/10 to 27/7 71 to 76

	At Exchange 4/2 in London.	*At Exchange 5.25 at 6 m.s. in Lyons.*
Oshiu—Extra	$820 to 850	30/ to 31/1 83 to 86
,, Best	$780 to 810	28/7 to 29/8 79 to 82
,, Medium to Good	$750 to 770	27/7 to 28/3 76 to 78
Hamatski.—No. 1 & 2	$650 to 700	24/1 to 25/10 67 to 71
Filature Silk	$920 to 1000	33/6 to 37/ 93 to 102

Silk-worms' Eggs.—Total arrivals since the beginning of the season are 1,120,000, and total settlements about 375,000 cards. Shipments have been as follows:

Goods contracted for in the interior by foreign houses at the beginning of the season, and native consignments	150,000
Goods bought in the open market at prices averaging about $2.25 for annual green, and $1.50 for white	150,000
Total cards...	300,000

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

An associatiation of Japanese merchants and bankers had offered to the native dealers to take their goods under advances of from $0.50 to $2.00 per card, with the object of maintaining prices, and eventually of shipping and selling for the consigners' account. Having failed in this, they are reported to be now buying on their own account for shipment by the American mails of 15th and 25th November.

We quoted on the 4th instant:—

Annual Green, Oshiu Daté	...	$2.25	to $3.00
,, ,, ,, Dewa and others	...	$1.75	to $2.50
,, ,, Joshiu Shimamura	...	$2.75	to $3.25
,, ,, ,, others	...	$1.75	to $2.75
,, ,, Sinshiu	...	$1.75	to $2.25
,, ,, Bushiu	...	$1.50	to $2.50
,, ,, Other sorts	...	$1.00	to $1.50
Annual White	...	$1.50	to $2.50

Since then prices have been slowly giving way, and may now be quoted 25 to 75 cents lower, according to quality.

Since the above was written the telegraphic advices regarding the political prospects of Europe are by no means reassuring. Deliveries are 285 piculs; Oshius are weak at the above quotations, but we have no change to report in the price of Hanks.

Total arrivals of silk-worms' eggs are now 1,142,000, total settlements about 475,000 and total shipments 365,000 cards. The above mentioned association is competing with foreign buyers, and we have no further decline to report in prices.

Tea.—Business in this article during the past week has been almost nominal, settlements only amounting to 900 piculs. Prices remain unchanged, but holders seem somewhat anxious to effect sales.

Common	...	$12.00 to 14.00	
Good Common	...	15.00 to 17.00	
Medium	...	18.00 to 20.00	
Good Medium	...	22.00 to 25.00	
Fine	...	$27.00 to 33.00	
Finest	...	34.00 to 39.00	
Choice	...	43.00 to 48.00	[scarce.

EXCHANGE AND BULLION.

Exchange.—Business during the past week has been very limited, the demand for Bank Bills is almost nil, and the Private Bills on offer are but few.

TAMSUI DISTRICT.

Coral Patch off the Entrance to Keelung Harbour.

THE following information has been received from Vice-Admiral A. P. RYDER, Commander-in-Chief, China Station.

"H. M. S. *AUDACIOUS* when leaving Keelung Harbour, Formosa, in May last struck on a CORAL PATCH, unmarked in the Charts. The position of this patch has since been determined by H. M. S. *LAPWING*, and is as follows:—

100 Foot Rock (Keelung Island)...S. 74° E.
Macedonian Point .....S. 3° E.
Brooker Point.....S. 27° W.

This patch is about 150 to 200 yards in extent with least water 3½ fathoms (reduced to low ordinary springs), soundings varying from 5 to 9 fathoms on the patch.

The bearings given show the exact position of the 3½ fathoms patch.

By order of the Inspector-General of Customs.

(Signed) DAVID M. HENDERSON,
Engineer-in-Chief.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, hens, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 1y

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 48.] YOKOHAMA, SATURDAY, NOVEMBER 25, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

A valuable contribution has recently been made to the Meteorology of Japan by the publication of a paper written by Staff-Commander Tizard, of H. M. S. *Challenger*, and presented to the 'Meteorological Committee' in London. It presents in a condensed form the results of the observations made at the Light-houses on the coast of Japan from the year 1870 to the date of the *Challenger's* visit here, and though the Blue Book which contains it must be consulted by anyone who wishes to gain all the information it contains, some few of the more leading particulars may be usefully recorded here for general reference. The following table has been constructed from it with this end in view.

	Mean height of barometer.	Mean temperature in shade.	Total rain fall.	Most prevalent wind.
			ins.	
Sagami	29.887	61.0	48.14	N. E.
Rock Island	29.981	62.3	60.94	N. E.
Oosima	29.947	66.8	71.43	N. W.
Siwo Misaki	30.016	64.7	64.78	N. E.
Saton Misaki	30.146	66.9	52.12	E.*
Nagasaki	30.160	67.5	40.64	N. E.
Rokuren	30.009	61.6	Imperfect.	N. & E.†
Isaki	30.037	62.2	54.27	W.
Isumi	30.025	59.9	47.61	N.
Awadji	30.212	58.0	38.13	W.
Nabe sima	Imperfect.	Imperfect.	—	—
Isauri sima	30.192	64.0	28.16	N. E.
Gulf of Yedo, Treaty point	29.919	60.6	85.27	N.
Yedo	29.954	56.9	69.92	N.§
Hakodate	29.875	50.2	no inform.	S. W.

Thus the place of least rainfall is Isauri Sima in the Inland Sea, and the mean temperature of Yokohama is 3°.7 above that of Yedo. The following observations are in the words of the report.

In June, July, August, and September, there is great variation of pressure over the southern portion of Japan more especially on the south-east coast, where the isobars are packed close together and make a very steep gradient. The cause of this is probably due to the Kuro Siwo or Japan stream which in the height of summer reaches the temperature of 86° and which must therefore be constantly giving off heat and vapour, causing an ascending current to take place. This vapour is condensed after reaching a certain height, and precipitated over the adjacent coasts, when a copious rainfall is recorded at this season of the year. Owing to this great inequality of pressure storms are frequent. In the China Sea Directory, vol. IV., pp. 12, it is stated that "August brings unsettled weather with short gales from "various quarters, squalls, rain, and frequent calms." At p. 15 that "during the spring and summer months in the Gulf of Yedo very "violent and sudden squalls from the north come on frequently without "any warning, from almost a calm or perhaps a light air from the "S.Wd. Vessels passing between Yokohama and Hakodate report "having experienced the same at this season, and have met with loss of "spars and sails in consequence." In the same page Captain Bullock, R.N., is quoted to the effect "In the latter part of July fogs were only "experienced between lat. 36 N. and 37 N. fine weather with land and "sea breezes prevailing. Northward of 38 N. stiff breezes from west "lasted a few hours." (Captain Bullock is speaking of the east coast of Nipon.) He goes on to say "On the south-east coast the weather "appeared to be quite different. The fogs became modified when in "contiguity with the warm water of the Japan stream, and formed into "detached banks or clouds, which hung over sea and land obscuring "the hills almost to their bases. A strong S. W. wind may also be "met with when a light east wind or calm is prevailing on the east "coast."

In August and September 1871 no less than 16 gales are registered in the return from Rock Island lighthouse.

The American Squadron under Commodore Perry experienced a heavy gale in July off Yedo, and in this month in 1874. H.M.S. "Iron Duke" also encountered a heavy gale between Yedo and the Kii channel. In August and September 1858 H.M.S. "Furious" reported "frequent heavy gales from E.N.E. through south to south-west." H.M. "S. Princess Royal" experienced a heavy gale in August off Vries island which blew a close-reefed maintop-sail out of the bolt rope, and H.M.S. "Iron Duke" in the same month had a heavy gale off Mela Head.

The prevalent wind during these months is southerly. Typhoons may be experienced as they pass out of the China Sea into the Pacific, but they generally travel to the southward of Japan.

In October the wind again has changed to the northward, the pressure increases, and becomes more equal, and consequently fewer gales are reported, and the weather is finer, much rain however falls on the S.E. coast.

* And as many days (88) of N.W.
† 78 days reported calm.
§ 88 days reported calm.

Among the passengers by the *City of Peking*, which leaves for San Francisco to-morrow morning, is Dr. Wells Williams, late Chargé d'Affaires for the United States at Peking. We wish it were in our power to pay a worthy tribute to this distinguished American, forty-three years of whose life have been spent in China in the enviable pursuit of advancing the condition of her people, making her and them more widely known to the world, in promoting the interests and advancing the reputation of his country and his countrymen, and in setting an example of justice, forbearance and wisdom to all who came within the sphere of his influence. Fortunate indeed must be esteemed the man who possesses Dr. Williams' record, and fortunate the nations he has so long and so admirably served in having possessed such an intermediary. That he may yet long be spared to enjoy, what he values most, the consciousness that those works which form the monuments of his industry and learning, are bearing good fruit in the country in which he has passed so many years, is the heartfelt wish of all who have enjoyed the privilege and honour of his friendship.

Two new features have been developed in the silk worms' eggs trade which are exciting much interest among those concerned in this business, and the result of which will be eagerly watched for. Certain Japanese leave for Europe in the *City of Peking* to-morrow morning, taking with them a large number of cards, which, having failed to dispose of to the *graineurs* in this market as usual, on terms which the holders considered sufficiently advantageous, they have determined personally to dispose of in Italy. It is certainly late in the season to ship cards, but the route by which they are shipped is a novel and it remains to be seen whether it will be a convenient one. On arrival at San Francisco the cards will be forwarded by rail to New York, from which place they will be shipped without delay either to Havre or

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Liverpool, and thence to Italy. The numerous transshipments will necessitate great care and involve great expense, but it is expected that the latter will be fully covered by the cheap rate of freight at which the P. M. S. S. Company take the cargo. The favourable result of the speculation, however, does not entirely depend on the cards arriving in good condition in Italy, but also on the owners being able to find a good market for them on arrival, as it is quite probable that this bold speculation on the part of the Japanese will meet with a combined opposition from the *grainers*,—whose monopoly is thus interfered with—which may render the success of the operation doubtful.

Just two months ago we called attention to the unsightly and unfinished state of the Bund and suggested that stone posts and chains, to take the place of the blocks of stone which are supposed to do duty for a parapet, would add greatly to its appearance. An accident which occurred during the week shows that some alteration should be made in the condition of the Bund for the safety of equestrians and carriages, as well as for appearance sake. On Friday morning a pair of ponies which were being driven in a small phaeton, commenced fighting, ran away, and despite all efforts to prevent them, dashed over the stones lying on the edge of Bund and into the sea. Fortunately there was no one in the carriage but the driver, who luckily escaped without injury, but it is quite possible to imagine that such an accident might have occurred when ladies or children were in the vehicle, and that fatal results might have ensued. The alteration we suggest should be made without delay, the more so as both conditions can be obtained at a comparatively slight outlay.

We are glad to hear that our Amateur Dramatic Corps have at length commenced the active rehearsal of Tom Taylor's capital comedy of *The Overland Route*. This piece is by no means an easy one to put on the stage, and we can hardly hope that it will be ready for representation much before Christmas. Indeed, to produce it any time during next month will necessitate diligent efforts on the part of all engaged in it, and we trust they will not be spared. The public has a claim on the amateurs, founded on support given at all times, and, now and then, after some little disappointments. There is no compulsion to volunteer, but, having done so, the uniform bears obligations with it. We shall never come well through Christmas without our pantomime, or that which recalls its pleasures.

We have to acknowledge the receipt of the Calendar of the Tôkiô *Kaisei Gakkô*, or Imperial University, which has been kindly forwarded to us by the Vice-Director. We shall take an early opportunity of reviewing the work.

From the "Japan Mail Daily Advertiser."

Monday, 20th.

From the *Hôchi Shimbun*.

Mr. Yoshikawa, the Commissioner of Telegraphs, will start from Yokohama on the 19th instant to inspect the telegraph lines on the Island of Shikoku.

From the same.

The members of the *Genrô-In* will hereafter meet every Monday, Wednesday and Friday for the purpose of discussing all questions laid before them.

From the *Nichi Nichi Shimbun*.

The various newspaper offices of the capital have received an order from the Department of the Imperial Household to send copies of their issues to the places where the Empress will stop on her journey to Kiôto, and, on arrival at that city, they are to be sent to Her Majesty there.

From the same.

The funeral of those who fell on the Imperial side at Kumamoto, took place on the 5th instant at Hanaoka.

The procession, as it left the garrison quarters at Kumamoto, was headed by a military band and three companies of infantry, the men all carrying white flags as a mark of condolence. Then followed the coffins of General Taneda, Colonels Ôshima and Takashima, the Nagasaki *samurai* who had fought on the Government side, and of the 11 officers, 21 non-commissioned officers and 83 privates who fell. The procession was closed by six companies of artillery.

On the same day the remains of the Governor, Mr. Yasuoka, were carried to the grave, accompanied by two hundred officials in full dress.

From the same.

A Corean fishing vessel was blown over to Tokunoshima in Kagoshima *ken* at the end of last month, the crew of which were treated with care at Kagoshima and will be sent home shortly.

From the same.

Mr. Koseki, the vice Govenor of Kumamoto, who was recently wounded by the insurgents, is gradually recovering.

About one hundred of the Kumamoto insurgents have been captured up to this, and it is estimated that only twenty are still at large, who will probably die of hunger among the hills unless they surrender.

From the same.

There was a great demand for the *Kumamoto Shimbun* of the 29th and 30th October, and upwards of 6,000 copies of the issues of those dates were sold.

From the *Akébono Shimbun*.

Mr. Sasajima, the manager, and Mr. Ariyoshi, the editor of the *Tekka Shimbun*, was placed in the charge of the ward authorities on the 17th instant.

From the same.

As the students of the *Kaisei Gakko* of Tôkiô are increasing in numbers, the present building has been found too small to afford requisite accomodation, so that a large University building will be erected contiguous to the present one.

From the *Osaka Nippô*.

The wives of Yamada, Sazo, Okudaira, and other subordinate leaders of the Chôshiu insurgents, have, it is said committed suicide.

Tuesday, 21th.

Her Majesty the Empress and suite arrived at the Kanagawa station yesterday morning by the ordinary train which left Shinbashi at 8.15 a.m., travelling in one of the Imperial carriages. On arrival at the Kanagawa station Her Majesty was received by the Vice-Governor and other officials of the *ken*. After a short delay at the station Her Majesty proceeded to her *norimono*, and escorted by the Imperial Household and *ken* officials, a small military guard and a body of police, and followed by her suite, continued her journey along the Tokaidô. There was no great demonstration made along the line of route by those who witnessed the procession, which itself in no way seriously interfered with the usual traffic. There is a marked difference in the manner in which an Imperial journey is undertaken in these days and that of old times.

On account of the departure of Her Majesty the Empress for Kiôto, the various public departments were closed yesterday.

The driver of the last train from Tôkiô on Sunday night reported having run over some obstruction between the Kanagawa and Yokohama stations. An examination was at once made, when it was ascertained that an old man had strayed on the line while in a state of intoxication and had been knocked down by the engine. A frightful wound had been inflicted on his head, though when picked up he was not dead but insensible. Medical attendance was at once procured but without avail, as he only lingered till 4.30 a.m.

The Berland troupe gave a performance on Saturday night for the benefit of Madlle. Hélène Berland to a deservedly well filled house. The performance was of a varied description, and a change on those previously presented to the public. Everything went off well, and Madlle. Hélène particularly displayed a charming amount of precocious talent. The Berland entertainments are well worth a visit.

From the *Chôya Shimbun.*

NOTIFICATION No. 134.

It is hereby notified that administering medicines or remedies which are said have emanated from the gods, or are compounded from secrets said to be known to certain families only, will hereafter be prohibited.

KUSUMOTO MASATAKA.
Vice-Governor of Tôkiô *Fu.*

November 18th, 1876.

[The above has been issued with the object of dealing with certain evasions of the regulations for the registration of drugs and medicines, which frequently occur under the guise of charity.—ED. *J. M. D. A.*]

From the same.

The Government are advertising for one hundred smart men for the Imperial Navy.

From the same.

Mr. Ôkubo, our editor, was on the 18th instant sentenced to pay a fine of 20 *yen* and to undergo imprisonment for the term of three months, for having violated the 14th article of the Press-laws by publishing a communicated article in No. 919 of our issue, to the effect that the Press- and Libel-laws had hitherto been wrongly administered and that they should be modified to a certain extent.

From the *Nichi Nichi Shimbun.*

His Majesty the Mikado returned from Narashino-hara at noon on the 18th instant, where he had reviewed the troops of the Tôkiô garrison.

From the same.

As order has been restored in the South the Imperial troops are returning to their various headquarters.

From the same.

We hear that a new building for the *Daijôkwan* will be erected within the castle grounds at Tôkiô.

From the *Hôchi Shimbun.*

Mr. Shimagawa, the Japanese Consul General at Shanghai, will shortly return to this country on urgent business.

From the same.

It is said that the Government purpose building a palace for Her Majesty the Empress at San-cho-me, Akasaka, and are at present in treaty for the purchase of the requisite site.

From the same.

It is reported that a telegram was received by the *Naimusho* at midnight on the 18th instant from Yamaguchi *ken*, announcing that those insurgents who had not been captured were creating disturbances in certain parts of the district.

Wednesday, 22nd.

A meeting of the members of the St. Andrew's Society was held in the room of the Chamber of Commerce yesterday afternoon, and after reading the minutes of their last meeting a Committee was appointed to arrange for the usual dinner on the 30th instant.

From the *Nichi Nichi Shimbun.*

Though the hull of the *Niigata Maru*, belonging to the Mitsu Bishi Company, is in good condition, it has been found necessary to provide her with new engines and boilers. Her present machinery will therefore be taken out here, and after loading a general cargo she will sail for England, and on arrival there will be docked and provided with new engines and boilers. This course is dictated by economy, and the opportunity will be taken of sending several youths from the Mitsu Bishi Navigation School in her, in order that they may advantageously study practical navigation while on the trip to England.

From the same.

Mr. Tomioka has been appointed to the office of Governor of Kumamoto *ken.*

From the same.

Colonel Murata is about to undertake some improvements in the Prussian needle guns and Chassepot rifles belonging to the Army Department.

From the same.

The hospital for diseases of the eye in Owari-chô, Tôkiô, was opened on the 20th instant in the presence of a large number of both foreign and native medical men. Dr. Simmons will hereafter attend this hospital every Monday, Wednesday and Saturday.

From the same.

A bull at the Kaitakushi farm at Awoyama, having become enraged, attacked and gored one of the students in the thigh. The wounded man was at once taken to the hospital, where every care was taken of him, but his injuries are of so very serious a nature that little hope is entertained of his recovery.

From the *Chôya Shimbun.*

The Government are about to issue instructions regulating the treatment to be adopted towards those Coreans who may be cast away on our coasts.

From the same.

The twenty-third of this month will be observed as *Shinjôsai* (Thanksgiving day for the harvest) and all public offices will be closed.

From the *Hôchi Shimbun.*

A fire broke out at Shidzuoka on the 20th instant at 1.30 a.m., by which 160 houses were destroyed.

From the same.

The return of the police force which was despatched to Niigata is expected daily. They will bring with them Maki, Matsumoto, and Kimura, the insurgents who were captured there.

From the same.

The wooden bridge in Aitchi *ken* by which the Tokaidô crosses the Yahagi river has been so often carried away by floods, to the great hindrance of traffic, that it has been determined to replace it by an iron bridge, the total length of which will be two hundred *ken.*

From the *Osaka Nippô.*

When the Kumamoto insurgents attacked the barracks on the night of the 24th October, twenty-six of their number were killed outright and two subsequently died of their wounds; eighty-four committed suicide; twenty-nine voluntarily surrendered themselves; forty-five were captured by the troops, and nine are still missing.

Thursday, 23rd.

From the *Chôya Shimbun.*

A chemical laboratory, to occupy an area of some six hundred *tsubos*, is to be constructed within the grounds of the Bureau of Agriculture at Ogawamachi, Tôkiô.

From the same.

Beer of very good quality is manufactured at Sapporo, owing to the excellent barley which is produced at that place.

From the *Hôchi Shimbun.*

Some twenty of the Akidzuki insurgents are still at large, but great efforts are being made to effect their capture.

Fifty-three of the Saga *samurai* have formed themseles into a society called *Kakukôto*, and meet frequently. They hold that both the Saga and Kumamoto rebellions arose from the fact that the Government is too absolute, and that the people have in no way a voice in public affairs, so their great object is now to urge the establishment of a proper representative Government.

From the *Nichi Nichi Shimbun.*

On the 18th instant Mr. Kuroda, the Chief of the Kaitakushi, presented a seal skin to both the Empress and the Empress Dowager.

From the same.

A fire broke out on the night of the 20th instant at 11 o'clock at Kirigaya-mura, in the neighbourhood of Tôkiô, which destroyed seven houses.

From the *Akébono Shimbun.*

Mr. Ôgi, the Minister of Justice, arrived at Kobe on the 17th instant, and started from that place on the following day for Yamaguchi *ken.*

Friday, 24th.

The return match at foot-ball "Land *vs.* Water" was held yesterday afternoon. The weather was as favourable as could be wished and there was, in consequence, a large muster of players on either side. The "Land" team was stronger in good players than "Water," who were completely overmatched, but displayed their characteristic pluck in contending against overpowering odds. The result was three goals and three rouges for "Land" against a blank score for their opponents. Two players from Yedo rendered very effective service for "Land."

Yesterday being the Festival of the Rice Harvest was observed as a holiday by the Japanese. All public offices were closed and there was no issue of native newspapers either at the capital or this port. The houses were decorated with flags during the day and by lanterns at night, and the usual gas illumination was displayed at the *Machigaisho* from dusk until about midnight. Some of the Shintô temples at Tôkiô were visited yesterday afternoon by members of the Imperial family, many of the high officials, and, of course, by large numbers of the people.

Yesterday morning there were no sailing vessels at all in port with the exception of the *John Mackean*, which is laid up, and five small coasting craft, so that the harbour presented a more deserted appearance than it has shown for many a day.

Saturday, 25th.

H. I. G. M.'s frigate *Vineta* has gone down the Bay this morning for firing practice.

From the *Hôchi Shimbun.*

NOTIFICATION No. 143.

His Majesty the Mikado will visit the province of Yamato and city of Kiôto during the month of January next, for the purpose of worshipping at the tombs of Jimmu and Kômei Tennô. His Majesty will travel between Yokohama and Kobe, both in going and returning, by sea, and the precise date of His Majesty's departure will be notified later on.

SANJÔ SANEYOSHI,
Prime Minister.

22nd November, 1876.

From the same.

The Mitsui Company intended to publish a journal called the *Chugai Bukka Shinpô*. It will be issued every Saturday, and the first number will appear on December 2nd.

From the same.

We lately heard that public matters in Kôchi *ken* (Tosa) were not proceeding smoothly, though we were yet in hopes that no serious trouble would arise, but regret now to hear that many of the officials have sent in their resignations to the Government.

From the *Nichi Nichi Shimbun,*

Mr. Yanagiwara, who has recently been appointed to the post of Japanese Consul at San Francisco, will start for that port by the next mail.

From the same.

About 600,000 silk-worms' egg cards have been sold at Yokohama this season to foreigners, the average price realized being sixty cents.

From the same.

Masuda, Shibusawa and others have lately been advancing money to silk-worms' egg merchants, taking their produce as security, but the speculation has not turned out as well as was expected, though it greatly assisted in keeping up the price of cards. There are now about 220,000 cards in the hands of those who have made advances against them, 150,000 of which will find a market in this country.

From the same.

Mumehara of Oshu, and Shimomura of Jôshu, will take with them by the next mail 120,000 of the best silk-worms' egg cards to Italy, where they will dispose of them An interpreter accompanies them.

From the *Akébono Shimbun.*

Our editor, Mr. Sakai Kisaburo, has been found guilty of an infraction of the 1st and 4th articles of the Press- and Libel-laws, which renders him liable to 8 months' imprisonment and a fine of 100 *yen*, but as he is at present undergoing a sentence of 6 months' imprisonment for a previous offence against the same laws, the difference between the last sentence and the first has been added on to the term he is already serving, so that he will be imprisoned in all 8 months. The fine of 100 *yen* will be enforced.

From the *Eiri Shimbun.*

We hear that a number of forged 1 *yen satsu* are in circulation, so caution the public against taking them.

From the *Osaka Nippô.*

The Coreans have informed the Educational Department that they are desirous of employing a Japanese medical man skilled in the practice of the western nations.

From the same.

About 230,000 *kokus* of rice now stored at Osaka are to be shipped to England, having been sold to a foreigner.

From the *Chôya Shimbun.*

A fire broke out within the precincts of the Osaka Mint on the 22nd instant, but happily it only resulted in the destruction of a kitchen attached to the house of one of the foreign employés, where it had originated.

Our private letters from Tientsin are painful to read. The province of Chihli to the southward and westward is now beginning to feel the horrors of famine, and although really great efforts have been made by the government to avert a general distress as much as possible, very many populous districts have had no relief, and are now fast coming to the end of their scanty stocks of food. No help can now be given to the thousands of miserable creatures already in extremity. The missionaries in Tientsin of all ereeds say the aecounts they have from Shantung are heartrending. Two missionary gentlemen give a cruelly harrowing account of a visit they have lately paid to a Christian family in Shantung well known to them. They found both man and wife horribly changed, black and incapable from privation. The unfortunate couple said they were about to take poison, as neither work nor food could be obtained; and—awful to relate—the day before they had *buried their two children alive*, as the poor little creatures were starving! In large and formerly fairly prosperous districts the drought of this year was never broken by rain, and the second crop failed like the first crop. No cereals or fruit or vegetables could be grown. The suffering people have eaten all the leaves off the trees, have lived on tree-bark, and roots, and now that the winter has begun the poor famine-stricken wretches are dying fast from starvation and cold. No help can come and those who die first are to be envied. We are told that the appearance of the unfortunate creatures is sad to see. The men and women have become shrivelled and black, the children are pot-bellied, silent, sullen, and with scarcely strength to crawl about. The mortality will be dreadful, and some districts will be depopulated. It was though that in Chihli the second crop would give three-quarters of an average yield. In many places the crop was good, but in others there was no yield at all. We are assured that the second crop, taking the whole province into consideration, will be perhaps one-third, certainly less than half, an average.—*Shanghai Courier.*

THE LATE INSURRECTION.

NO one could reasonably expect that the death of the old feudal system of Japan would take place without a series of struggles more or less vigorous and protracted in proportion to its former vitality and the measure of its present decay. It must not be forgotten that the policy necessitated by the fall of the Shoguinate did not permit of the system being simply allowed to die out. Its death was decreed as essential to the welfare of the Empire, and to the establishment of the new order of things which was to supersede it. But the destruction of a system so old and deeply rooted involves far more than a sentence, a ceremonial, and an execution. The true analogy for it is not the extinction of a single life, but the clearing of a tangled mass of rank vegetation, the growth of centuries, and the lair of every kind of wild beast. Those who imagine that criticism has done its duty when it has blamed the Government for this or that outbreak, and has declared that the three or four similar events which have occurred since the Restoration are directly attributable to obvious and inexcusable maladministration, take a measure of human affairs which is so far satisfactory, at least to themselves, that it spares much thinking, and meets all the questions which the ills of the body politic suggest, much as the candidate for medical honours in the *Malade Imaginaire* meets the questions put to him by his examiners. Whether the disease be dropsy, or *grandæ fièvre cum redoublamentis, grandæ dolor capitis, et grandum malum au côté, cum grandâ difficultate et peinâ à respirare*, the answer is always the same, and the aspirant is enjoined

> De non faire rien de ses mains,
> De remettre ses amours,
> Quand de ceux ses parents doctes facultatis,
> N'auront dit leur sentence
> Et mort de sang froid.

For the most part the criticism applied to these successive troubles by foreigners has been of this mechanical class. Undaunted by the fact, which they are yet always ready to acknowledge, that there is a wide and at present practically impassable gulf between the Japanese mind and our own, they still imagine that their one simple diagnosis explains every form of malady, and their one prescription is certain to cure it. It seems otherwise to us. We confess indeed, that we have no theory in which the slightest confidence can be placed, but even this is better than one which formulates itself in simple curses. The doctrine of Total Depravity may, for all we know, be true; but nothing can be more certain than that a man would fail in practical life did he attempt to solve all the problems of each successive day by it. In treating an unknown disease, the wiser physician will try to ascertain all he can of the antecedents and idiosyncracies of the patient he is attending, and resort rather to what the French call *la Medicine expectante* than to any dogmatic method of treatment. Japan is now somewhat in the condition of the supposed patient in Macaulay's essay on Sir James Mackintosh's History of the Revolution. "A traveller," he says, "falls in with a berry which he has never before seen. He tastes it and finds it sweet and refreshing. He praises it, and resolves to introduce it into his own country. But in a few minutes he is taken violently sick; he is convulsed; he is at the point of death. He of course changes his opinion, pronounces this delicious food a poison, blames his own folly in tasting it, and cautions his friends against it. After a long and violent struggle he recovers, and finds himself much exhausted by his sufferings, but free from some chronic complaints which had been the torment of his life. He then changes his opinion again, and pronounces this fruit a very powerful remedy, which ought to be employed only in extreme cases and with great caution, but which ought not to be absolutely excluded from the Pharmacopœia." The parable is not indeed of perfect application to Japan. But we certainly have the hitherto unknown fruit—European knowledge; we have the pleasure derived from tasting it; the subsequent illness and convulsions; and, let us hope, we shall also have the removal of chronic affections which often had previously made life a torment. But, to stand by, and blame the physician who has the greatest interest in the life of the patient, for every thing he does, seems to us unsympathetic at least, and will most probably prove to be very unjust. Certainly this course makes no allowance for the great fact that the malady has arisen from causes which, if not new in themselves, are at all events new to the constitution of the patient.

Thanks to the activity, and, latterly, to the increased seriousness of the native press in treating the causes of the insurrection just suppressed, we have more materials for forming a judgment upon it than we had in the case of the Saga rebellion, or of the riots in Kiushiu in 1873. And it must now be obvious to every one that the movement has found extremely little support in the country. Doubtless in every *ken* a certain number of discontented *samurai* might have been found to join MAYEBARA, and it seems probable that, but for bad management and want of concert among the leaders, the insurrection might have assumed more formidable proportions. But what weight can be attached to a cause which was forced to rely, for almost all the active measures taken, on the *Jimpu* party, a set of crazy fanatics who identify their top-knots of hair with the will of the Gods, and who regard with scorn and detestation the whole of that intellectual movement in the nation, which, in spite of all its superficiality, gives so much promise for the future? The discontent of MAYEBARA had a wholly different origin from that of his adherents. With him it can hardly be doubted that it arose from personal pique. Entrusted with office after the Restoration on account of his services at the time of the Revolution, he utterly failed in the discharge of his duties—not from want of will, but of civil capacity. His judgment was always at fault. He hesitated until the moment for decision arrived, and then decided according to the impression left on his mind by the last speaker. He was dismissed, but with every mark of sympathy and appreciation of his past services. He was allowed to retain his official rank, and was rewarded with a pension which there is no evidence to show that he considered inadequate to his deserts. Had he remained in office, he would have been a perpetual source of obstruction and annoyance to his party, and hence his removal. For eight years he has brooded over his imaginary wrongs, instead of resting on honours fairly won and liberally rewarded. There was a common measure of discontent in his own mind and in that of his followers, and a common measure in their intentions, the overthrow of the Government. But the exciting cause of action in the two cases was widely different. There is extremely little evidence in MAYEBARA's manifesto that he at all sympathized with the extravagant conservatism of his adherents, and no evidence whatever that they espoused his personal cause, or regarded him in any sense as a representative leader. There was thus no unity in the movement; the head did not fit the body, the body cared little or nothing for the head. What could be expected from a rebellion thus led? Nor is there any evidence whatever that the people as a mass had the smallest

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

sympathy with the insurgents. In the troubles of the early part of 1873, the people played an important part. The cries against the Government were not class, but popular, cries. Thousands of men assembled to protest against the cattle being butchered for food; to insist that the sacred trees should not be cut down; that no change should be made in the religion of the country; that the prices of wares in the towns should be lowered; that the woods should remain, as hitherto, in the possession of the peasants; that only rice-land should be taxed; that the local paper issues should be exchanged for the issues of the Central Government; and that artificers should be paid at the rate of two *sho* of rice a day. In the Tottori *ken* the mass of the people armed themselves and demanded that the price of rice should be lowered; that foreigners should not be allowed to reside in the country; that the conscription law should be repealed—the very law by which they have for ever been liberated from the thraldom of the *samurai*—; that the old system of levying the land-tax should be returned to; that the new national schools should be abolished and the old private-school system restored; that the new calendar should be abolished, and the cherished old rubbish of the Chinese calendar reinstated. Nonsense as all this may have been, it represented the hopes and desires of a great majority of the population, who were willing to fight and if necessary to die for them. The cry under which the Saga insurrection had birth was against Corea for the repeated insults offered to the country and resented by the military class, and against China for the mal-treatment of the Loochooans by the savage aborigines of Formosa, and both, so far as they represented a desire to avenge these wrongs, were creditable to those who raised them. But what real justification can be found for MAYEBARA's rebellion?

It is obvious then, we think, that the late insurrection was only one more throe of the expiring feudalism of the past, that the narrow class limits to which it was confined prove how surely the mind of the nation is advancing in the new path which represents alike its aspirations and those of its Government. Each successive struggle of the dying system shows greater weakness, and with each the firm position of the Government becomes more evident.

RAILWAYS.

IN July last we laid before our readers a short epitome of Mr. BOYLE's Descriptive Reports of the lines of railway laid out from Kiôto, *viâ* Otsu and Maibara to Tsuruga, and from Maibara to Kano, Miya and Doda, our special object being to show the arguments which may be adduced for completing the connection between Kobe and Tsuruga, or, if that be impossible just now, for joining Kiôto and Otsu, in order to efface the existing break between the southern end of Lake Biwa and Kiôto.

Mr. BOYLE has recently made a further Report to the Government on the routes for the main trunk lines through Central Japan, viz: from Tôkiô to Kiôto and across to Niigata, the latter section starting from Tanaka (on the Nakasendo, and about a third of the distance between Tôkiô and Kiôto) and running down to its terminus along the Chikuma river. He does not, of course, advocate the construction of these trunk lines at present; but he has laid down the routes for them after long and careful study, aided by a complete knowledge of the physical features of the country, so that sections of the entire system may be contributed at any time, without danger that they will eventually be out of the route of the future trunk lines. And in this he has obviously done well, inasmuch as the determination of the trunk lines is a necessary guide to the construction of the roads which must be made or improved throughout the central districts, in order that road and rail may work together for the general advantage of the country.

The first section of the trunk line between Tôkiô and Kiôto is to Takasaki, a town of considerable size and importance in the Kuruma *ken*, with traffic converging on it by the ordinary country roads from every direction. "Much of the silk trade of the Mayebara district," says Mr. BOYLE," passes through it on the way to Tôkiô. The position and trade of Takasaki, and the comparatively easy nature of the works to be executed between it and Tôkiô, seem to point out this section naturally as the first extension of the existing line from Yokohama that could be undertaken with profit and advantage. The cost per mile should be much below anything that has yet been done elsewhere in Japan. It would, in fact, from Uyeno to Takasaki, be, for its length, the most readily constructed section of the railway between Tôkiô and Kiôto. It could not fail to command a large traffic, and owing to its easy gradients, could, in conjunction with the 18 miles of open line, be advantageously and economically worked."

Of the remaining sections, viz, from Takasaki to Matsumoto (8 miles), from Matsumoto to Kano (125 miles) and from Kano to Kiôto (74 miles), we shall say nothing more at present than that the last of these has been staked out, but that there is no reasonable probability that they will be undertaken for many years to come. The same remark applies to the branch line from Tanaka to Niigata (150 miles).

We do not know, and believe no one knows, whether the Government has decided to make the connection between Otsu and Kiôto, a distance of only 10 miles. We can easily understand that many considerations have combined to delay the formation of this decision. Against it, we have the expense at a time when the Treasury is straitened, when there is, or was, much political discontent in the country, and a strong disinclination to borrow the requisite money abroad. For it, however, we have arguments of a very cogent nature. The break between Otsu and Kiôto is absolutely fatal to anything like proper provision for the trade between Tsuruga and Osaka. Already very large, in spite of the disadvantages under which it is conducted, this trade could not fail to increase in proportion as the communication between the West coast and Osaka is made more perfect. The reduction of the expense of transport from Otsu to Kiôto and Osaka has been narrowly calculated at 75 per cent on the present cost, and the annual saving on the existing trade at $651,716. But it is obvious that under so favourable a change as that now pleaded for, this trade would grow very rapidly, perhaps far more so than is even now imagined, and would abundantly increase the prosperity of a very large district which has suffered perhaps more than any other from the changes produced by the Revolution. What we should like to see determined on is the complete junction of Kiôto to Tsuruga by railway. But it is obvious for many reasons that this is improbable for some time to come, and the country must for the present be satisfied with a less ambitious scheme undertaken in successive sections. The first of these should certainly be the ten miles from Kiôto to Otsu; the second, the thirteen and a half miles from Shiotsu, at the head of the Lake, to Tsuruga. The Lake would meanwhile supply, as it now does, the connecting link between the two roads, and the section between Otsu and Shiotsu, through Maibara, could wait for a more convenient season.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

In regard to the proposed line from Tôkiô to Takasaki (66 miles), already referred to, the following leading reasons for the construction of this section are adduced by Mr. BOYLE :—

1.—There is not any existing, or a probability of any competing, water carriage on the route.

2.—It would accommodate all traffic to and from Central Japan and the N. W. coast, whether by the Mikunitoge on the Shinshiu route, or to and from those home districts of which Mayebashi and Takasaki are the centres.

3.—It would form a material instalment of the future central trunk line.

4.—It could be worked with convenience and advantage in connection with the open line from Yokohama to Tôkiô, and it would be, as regards works and for its length, the cheapest and most readily made section between Tôkiô and Kiôto.

"These two lines referred to," Mr. Boyle goes on to say, "viz. from Kiôto to Otsu, (10 miles) and from Shinbashi, Tôkiô, to Takasaki (66 miles), or together 76 miles, should without difficulty be constructed and opened and a cost of one million sterling, or, say *yen* 5,000,000. And, whether considered alone, or in connexion with the open lines, there seem to be no other districts in Japan where more remunerative traffic may be expected ; nor is it possible that any other two extensions of corresponding lengths could be adopted which would more surely tell in favour of the two lines already in operation."

During the last two or three years there has been much misgiving among thoughtful men in this country as to whether Japan is ripe for any further railway extension. They point to the stationary returns of the past two years, and plead that if railways do not yield more, and show a more increasing yield, than they do at present here, this is *ipso facto* proof that any further sums spent or loans contracted for railway construction involve grave mistakes of policy. They urge that the road system of the country is far too imperfect and rudimentary to justify any further railway extension, and that before another *yen* is spent in the latter direction, three or four years at least should be occupied in improving and extending the roads. Speaking generally, there is no doubt that the country is not yet sufficiently advance for anything like a complete railway system. Its total capital is small, its resources are being very slowly developed, its trade is in its infancy, and it badly wants roads. But do the objections to an extended railway system apply to parts of the country thickly populated and in which a very large traffic already exists ? We hardly think so. Take the road, for instance, between Otsu and Kiôto. All travellers are struck with the great and incessant traffic on it, and equally so with the poor and rude provision made for carrying on that traffic. It cannot be doubted that the expense of constructing this little section would be amply repaid by the success of the line. Again, take the section now proposed between Tôkio and Takasaki. It passes through a thickly peopled and well-cultivated country, potentially, if not actually, rich, and already possessing a large road traffic. As we have already seen, a line of railway connecting these two places would be comparatively inexpensive, and would confer an immense benefit on the intermediate towns, villages and agricultural districts. We fail to see that the country is unripe for this section. Look at New Zealand, the Cape, Australia and all those partially developed countries. No effort is spared to extend their railway systems, and success invariably rewards the effort when made. It is true that they are peopled by a more enterprising, vigorous, industrious and commercial race. But how sparsely peopled ! Contrast these enormous and thinly inhabited tracts of country, with the thickly peopled, highly cultivated districts in this empire of which we now speak. It is population which ensures the success of railways.

It would be gratifying to find that Mr. BOYLE's arguments have prevailed with the Government. The line between Otsu and Kiôto certainly ought to be made—of this there can be no doubt whatever. For the other there is perhaps not quite as much to be said, though we feel entirely persuaded that it might be undertaken with full confidence The want of the first is a crying evil and injustice to a splendid line of traffic already established and certain to increase rapidly : the second is perhaps less of a necessity, but success might be predicted for it with almost as much certainty as for the first.

SPIRIT OF THE JAPANESE PRESS.

ARE THE SAMURAI TO BE DREADED ?

("Nichi Nichi Shimbun," 16th November.)

We have not the slightest reason to fear any insurrection which may arise, having for its object the revival of the feudal system or a reversion to old customs.

Some alarmists are constantly repeating that the discontented *samurai* are widely spread throughout Japan, and are by no means confined solely to Mayebara's or the *Jimpu* party,—men who consider that the action of the present Government has deprived them of all honour, and who are therefore eager to join in any outbreak against it which may offer any chance of success. On this account the utmost caution is necessary.

We are quite aware that there are many discontented men in this country, but it is idle to suppose that any such party cry as the "Feudal System" will ever arouse the whole nation into action. No, such is quite impossible. Look at the results of the Kumamoto and Hagi rebellions. The object of the insurrectionary *samurai* was that they might be reinstated in the condition of bygone days, but their cry for the restoration of feudalism failed altogether to gain adherents to their cause, which in consequence resulted in utter failure, so that all engaged in it were covered with ridicule. That the plans for the outbreak had been carefully prepared for months availed nothing. The result was disastrous failure, as we all know, and by such we may confidently assume that outbreaks of a similar nature will invariably end in a similar way; and however often such outbreaks may occur, if the cause be not one which appeals strongly to the sympathies of the whole nation, their suppression by the Imperial forces will be a matter of no difficulty, and they need cause no alarm to either the Government or the people.

It is not our intention to assert that the *samurai* have it entirely out of their power to cause grave apprehensions on account of the discontent with the present Government which prevails among them. Hitherto this discontent has taken a wrong direction, but were they to shun all ideas of feudalism and vigorously urge instead the question of the rights and liberties of the people, then indeed they might become dangerous to the Government. It should therefore be the special object of the Government to prevent these *samurai* from establishing themselves as champions of the peoples' rights and so making their cause popular. But how can this be prevented ?

During the time of the Tokugawas, when certain of the *samurai* wished to upset the existing Government, they succeeded in making their cause popular by first raising the cry of "*Joi*," and afterwards that of "Loyalty to the Mikado," both of which appealed to the masses, and caused the easy overthrow of the Tokugawa power. Had the Shôgun's party made terms in good time with the Mikado, it is doubtful if civil war would have raged in the 1st year of Meiji. The present Government should therefore take warning by this, and at once voluntarily concede rights and liberties to the people, and, above all, the establishment of a Representative Assembly, so as to deprive the discontented *samurai* of all chance of creating disturbances for their own selfish ends under the guise, and on the plea, of liberty for the people.

We do not like to compare our Government to an institution which has ceased to exist, but will do so on this occasion, with the object of trying to give our readers a clearer idea of our opinions.

We think that the upper classes in this country resemble the Constitutionalists of France. Such men as Lafayette and Mirabeau

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

were the leaders of these Constitutionalists, and caused the nobles to be deprived of their privileges, laws to be reformed, popular assemblies to be established, and the condition of the people generally to be improved. But these changes excited the resentment of the Royalists, as their power was crushed thereby, so that they secretly allied themselves with foreign powers for the purpose of putting down the Constitutionalists. At this time Danton and his followers, conceiving that the proceedings of the Constitutionalists were not vigorous enough, formed the Jacobin Club, the members of which pledged themselves to institute more thorough or startling reforms. To carry out these designs more effectually they united themselves to the Republican party, and were further joined by the Royalists on account of their hatred of the Constitutionalists. So the latter party was broken up, the Republicans gained power and the Monarchy fell. The reason of this was that though the Constitutionalists desired to introduce reforms to which the Royalists objected, yet their advancement was not commensurate with the requirements of the Republicans, who advocated sweeping changes which pleased the populace, and thus secured success to their party.

Now our present Government resembles the Constitutionalists, the Feudal System party the Royalists, while those who hope to gain power by raising the cry of "Peoples' rights" resemble the Republicans of France. As in France, so here may the two extremes meet to overthrow the moderate party, and it is this result which we dread and which calls for watchful care.

The Causes of the Insurrection.

("Nichi Nichi Shimbun," 15th November.)

The suppression of insurrection by military force, and the subsequent punishment of the insurgents in accordance with law, are nothing but proper in a case of rebellion. But if unduly severe measures are resorted to in such cases, the minds of the officials are apt to become more stern than is desirable in their attitude towards the unoffending section of the people, whose rights may thereby be jeopardized. This danger is always one of the residues of civil war, while all history shows that these crises afford special opportunities for the exhibition of wisdom in a Government.

The recent southern insurrection was quelled in ten days, and the country restored to the tranquillity from which it was disturbed. It is well, therefore, that the officials should now display a special discretion in not intermeddling between the people and their rights, and in refraining from applying to the well-disposed those ideas which were previously applied to the insurgents.

As we have repeatedly stated before, the Kumamoto insurrection had its origin in an extravagant sense of conservatism. But, if all we have heard be true, the acts of the authorities have in no slight degree tended to bring it about.

We shall not dwell upon the acts of those who are now dead, but we must be excused for the liberty we take in saying that the discontent and anger of the *Jimpu* party were certainly inflamed by the acts of the officials. Had the irritable conservatism of these men been more judiciously taken into account, there would have been no difficulty in dealing with them.

What must have been the feelings of these old-school men, for instance, when ordered to give up their swords and pensions? In the eyes of those who are so eager for reforms, these steps may appear proper enough and untainted by any harshness or injustice. But to men of more conservative minds they had so bewildering an effect as to produce a sense of intense perplexity and the greatest misgiving in regard to the future.

Orders of this nature having been issued by the Government, it behoved the local officials to carry them out with extreme circumspection. But, instead of this, another order was given that the old top-knots should be cut off and the hair should be worn in the foreign style. This greatly increased the existing anger. The wearing of the hair in foreign style undoubtedly changes the appearance, and it might be supposed that men so externally transformed were adopting foreign ideas. But what effect had it on their minds? Were they the less animated by conservative notions? Let men wear their hair as they choose. Rely on it that they are not governed any the easier because they have been made to change their style of hair-dressing.

These *samurai* have been deprived of their birthright, military service is no longer required from them, and they have lost all that they held in the highest honour. They differ now hardly in anything from common merchants and farmers.

In this condition of mind, not even the mildest and kindest attitude towards them of the officials would have restrained their discontent—the bitter fruit of a pride deeply wounded. Yet what treatment did they actually receive from the officials? When it was all-important that their anger and discontent should be dissipated by sympathy, the officials acted in an exactly opposite direction, and went so far in many cases as to turn them into contempt by speaking disdainfully to them, thus arousing in them deep indignation. This was gravely wrong.

Look again at the manner in which the affair of the public assembly was treated. So long as the officials permitted it to be open, and the people chose their representatives, it should have remained open, and the authorities should have done all in their power to make it bring forth as much good fruit as possible. But to order it to be closed so soon after it was opened, naturally surprised and exasperated the people, and seemed to prove that an assembly would be permitted so long as it made men wonder at the progress and enlightenment of which it seemed to prove the existence, but not if it solely had the public good for its object.

The officials looked down upon these conservatives with an excessive contempt, and thought they could treat them in the most arbitrary manner, and their conduct towards them became in consequence extremely oppressive.

Now it must have taken ten days at least for the two hundred men of this *Jimpu* party to unite with Mayebara, and as Kumamoto is a comparatively small place—of nothing like the extent of Tôkiô—the officials must have heard of the plot which was laid before the fatal night of the outbreak. Why is it then that steps were not taken to prevent it? The fact is that the authorities looked down with an excessive contempt upon the conservatives, and thought they could crush them at any moment with perfect ease, and thus became careless and were taken off their guard.

The real origin of the Kumamoto insurrection was the intense conservatism of those engaged in it, but the proximate cause of it was the oppressive rule of the authorities, and this is greatly to be lamented. The judges will now doubtless pass capital sentences upon all who deserve death, and pardon all others who may deserve any such greater leniency as the law allows, and these are the proper steps to be taken. At the same time let us hope that those who joined the rebellion in a moment of anger and excitement, and who sincerely repent of their acts, will be mercifully dealt with. If the officials are too severe and act in a spirit of excessive harshness, they will exhibit this towards the unoffending portion of the people and disturb them in the enjoyment of their rights. As the present authorities know their duties, our advice may be superfluous; but we have written the above to show the view commonly taken by the public of this subject.

The Elder Saigo.

("Nichi Nichi Shimbun," 18th November.)

Examine well the recent conduct of Saigo Kichinosuke.

Do those who imagined that Saigo would take active measures against the Government still doubt his loyalty? Or are they not now convinced that they were wrong?

Saigo suddenly retired from office in the winter of 1873, and since that time men have not ceased to make conjectures regarding his intentions. Some supposed that he was trying to unite all the *samurai* in opposition to the Government, while others thought that he stood aloof out of enmity to the administration. Others again said that the country could not get on without him. Many other rumours of this nature kept the minds of men in constant doubt.

We expressed our own views on this subject in the spring, but were opposed by other writers outside; and when Mayebara himself was under suspicion it was commonly asked, Is not Saigo inciting these discontented men? But when the insurrection actually did take place, the *samurai* of Kagoshima took no part in it, and we are led to believe that what we wrote in the spring was correct. And as the suspicions regarding Saigo were not confined to the public writers, we will give our reasons for thinking that no such doubts regarding him have any real foundation.

At the time of the Saga insurrection the insurgents themselves and the mass of the people expected that Saigo would take part in it. But was it not owing to his influence that the *samurai* were withheld from joining in it?

When one of our men-of-war was fired upon by the Coreans last winter, it was at once expected that the Satsuma clan would rise to the cry of a Corean expedition, and thus try to embarrass the Government. But it was owing to Saigo that no such cry was raised.

Some time ago when the Government was discussing certain reforms, the Cabinet split up into two parties, one of which tried to induce Saigo to join it. But he refused to stir from his position.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Although Kumamoto and Akidsuki are in the neighbourhood of Kagoshima—a *ken* unquestionably saturated with discontent—the *samurai* of the *ken* took no part in the insurrection, and this was wholly owing to Saigo's influence.

Mayebara and his party have long been trying to win over Saigo to their side, and even pretended they had received supplies of arms from him. But was it not owing to Saigo's influence that Mayebara received no assistance from the Satsuma *samurai*?

These are among the troubles the country has gone through since Saigo resigned and returned to his native province, but he has not only given all these discontented men no assistance, he has forbidden his name to be associated with them, and all this proves how resolutely he has stood aloof from these exhibitions of discontent.

We believe that all these suspicions regarding Saigo's loyalty arise from the belief that he is discontented with and antagonistic to the present Government. And the *samurai* think that because they are themselves discontented and Saigo is so likewise, he would join them in any act of insurrection. But we appeal to the facts adduced above to show the absurdity of these views. The public writers have cast suspicions where they cannot lie, and the discontented have placed their faith on a man who refuses to have anything to do with them. Did they know how loyal this man is, they would not have written as rashly as they have.

Those who imagine that if Saigo were in the Cabinet affairs would be more harmoniously administered, show that they do not understand the character of his mind. He is a strong man in war, but he is little skilled in dealing with civil affairs, and, we believe office to be extremely distasteful to him.

Saigo is content with the honours bestowed upon him for his former services, and has no wish but to enjoy a peaceful life in his own home. Thus there are no grounds on which to suspect his loyalty.

We recommend the discontented not to expect any countenance from Saigo, or they will assuredly be disappointed; and we may inform the public writers that he is in no way suited for civil office, and thus it is quite wrong to wish he were in the Government. He is not discontented, but enjoys his retired life, perfectly content and unswervingly loyal.

Wise Forbearance.

("Hochi Shimbun," 4th November.)

Men who make large sums of money at the close of a war by extensive speculations, think that the carrying on of regular mercantile business involves too much trouble, and are continually looking about to find some way in which money may be made with less labour. Having once been successful, they imagine that they must always be so. But although money is only to be made by speculation when a country is in an unsettled condition, the idea of resorting to it seldom leaves the minds of those who have profited by it, even though times have become more settled. Thus they often incur severe losses, and thus it happens that so many men become bankrupts after a war. The number of bankruptcies in the United States since the civil war has been very large, though we understand that now, after a lapse of ten years, commercial affairs there are resuming a more settled condition.

The vast number of bankruptcies which have recently occurred in Japan have, we believe, originated in this way, and those who have thus been ruined owe their fate to this source. What, however, are the reasons why there have been so many bankruptcies among the steady going merchants? If we are not mistaken, they are as follows:—

1.—The country having been unsettled, no correct estimates could be made of the quantity of goods required for consumption.

2.—Those who lend money do not leave it in the hands of the borrowers for a sufficient length of time to enable them to turn it to good account. On the contrary, they constantly press for its return.

Thus the merchant has two sources of embarrassment to contend with and finds the greatest difficulty in avoiding failure. If he had only the first to fight against he might sell such superfluous goods as he had in hand, and thus manage to discharge his debts; or, if he had only the second difficulty to meet, he could agree with his creditor to pay the debt little by little, and thus avoid ruin. But as both these difficulties have to be contended against, and as we can see no present remedy for them, the merchants are likely to have a bad time.

Previous to the civil war, the quantity of goods required for consumption was fairly well settled, and bankruptcy was a very rare thing. And again, those who lent money did not demand the immediate return of it, but allowed the borrowers sufficient time to get a good footing in business, and these two facts combined to prevent during the Tokugawa times the frequent bankruptcies which now occur.

Nine years have passed since the Revolution, times are again becoming more settled, and the disappointments caused by the difficulty of getting trustworthy estimates of the quantity of goods required for consumption is fast decreasing and will soon disappear. But, much to our regret, there is still far too great a tendency in lenders to seek the return of their loans before their creditors have had time enough to establish themselves in business. If the lenders always got back the whole of their money by thus pressing for it, something might be said for the practice. But this is seldom the case, for a borrower who is pressed to return money is seldom able to pay back the whole amount lent him, and thus loss comes to one side and ruin to the other. If the money were allowed to remain in the hands of the borrower until he had the power of returning it, from the proceeds of his business, both these evils might be avoided, and the course would be more profitable for both sides. Failing this, the borrower tries to get money elsewhere to save himself from the disgrace of bankruptcy, and if successful—which, by the way, he seldom is—he may do well. But if not, he becomes insolvent. Would it not be better then for the creditors to allow their money to remain with the borrower as long as possible, and not to give so much trouble and incur so much risk of loss to both sides by urgently demanding it?

We are happy to say there are signs of a change in this respect coming about. An example has been lately set by the Horaisha in the matter of Mr. Goto's obligations. His debts were over a million of *yen*, and a request was made by him that they might be gradually liquidated by the proceeds of sale of coal from the Takashima mine. The creditors agreed to this, thinking that it would be better to get the whole of their money back, even though but slowly, rather than lose it altogether. This seems to us to indicate that there will be less pressure than formerly put upon debtors, and under this lighter treatment business will improve. We are happy to think that this conduct on the part of the Horaisha may set a good example. We extol the generosity of the creditors, and trust our expectations may be realized.

REVIEW.*

IT is to be regretted that European scholars have paid so little attention to the old classical literature of Japan, and have for the most part confined their studies to works belonging to a period which, when compared with the one which preceded it, justly deserves to be called the Dark Age of Japanese History—an age of decadence in the literature, of decay in the language, and of degeneracy in the national customs and character. The records, however, of even the most barbarous times have a value of their own, and in the case of Japan, the history of the age of decadence which may be said to have come to a close with the late Revolution derives an additional interest from its nearness to our own day. We were therefore disposed to welcome any trustworthy addition to our knowledge of this period, but we fear that Mr. Dickins' Translation of the *Chiushingura* cannot be regarded as of very great value in this respect.

Of the original Japanese work it is unnecessary to say much. It has no great literary merit, but is certainly a curious picture of the manners of the time, and with scenes of feudal pomp, of overstrained loyalty and filial obedience mingled with brutal insult, violence, licentiousness, assassination and suicide, it faithfully reflects the semi-barbarous state of society of which it is the product.

Mr. Dickins' mode of translation is somewhat peculiar. He says that it is made partly from the text of the abbreviated form in which the story is more commonly met with, but mainly from the *jōruri* (or musical romance) in which the tale is amplified and adapted for theatrical recitation, "and that a few explanatory additions, necessary to make the story plain to the English reader, have been incorporated with the translation, which is throughout, and purposely, a free one, and in some instances it has been found advisable to leave untranslated, or to translate shortly portions of the original."

---

* *Chiushingura*, or the Loyal League, a Japanese Romance, translated by Frederick V. Dickins.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

It is perhaps not to be wondered at that the *Chiushingura*, subjected to this process, should have become converted from a stage-play, which it is in the original, if words have any meaning, into a 'romance,' but whether the result should be called a translation seems questionable. Most part of it is, however, undoubtedly intended as a translation from the Japanese drama known as the *Chiushingura*, and as such we shall accordingly proceed to examine it.

We presume that it is the word *Daijo* which is translated 'Author's Preface.' But there is no Author's Preface to the *Chiushingura*, and what Mr. Dickins has given us as a preface is really only the first few lines of the *Daijo*, or Introductory Act, and is recited in the theatre as much as any other part of the play. Indeed there is not even a full stop at the end of the so-called preface. It is grammatically connected with what follows. With these loose notions of the character of the original, the translation itself is perfectly in accordance, as our readers will see by comparing the versions given below.

Mr. Dickins' translation.	*Our translation.*
Everyone knows that, to enjoy a savory dish, one must eat some of it; and the confusion of a country where the loyal and brave deeds of worthy *samurai* remain unnoticed is like that of a dark night, when not so much as a star-twinkle is to be seen; which is the reason why I have written down what follows.	Though there be a savory dish, if no one eats of it, its flavour is unknown. Thus when a country is at peace, the loyalty and valour of good *samurai* are concealed, like the stars which are unseen in the daytime, but become visible in the confusion of night. An instance of this, here in this *kana*-written—(The remainder of the play is the noun which this last adjective qualifies).

Truly the confusion of this translation is like that of a dark night when not so much as a star-twinkle is to be seen!

We have taken the trouble to compare the first act of the Japanese original with the English version, and after making every allowance for the peculiar mode of translation, we must say that these seven pages contain many more blunders than we care to enumerate. The main thread of the story is doubtless preserved, and many of the incidents are not badly described, but errors in detail are so numerous that we cannot help thinking that Mr. Dickins would have shown greater discretion if he had postponed the publication of this book until he had more thoroughly mastered the language in which it is written, or obtained the assistance of a more competent scholar than himself.

The following are a few of the errors to be found in these seven pages are applied.

The words 'Imperial' and 'Majesty' are applied to the Shôgun, a vulgar error which we thought had long ago been exploded, and for which the original *Chiushingura* affords no justification.

'*Zai Kamakura no Shitsuji* does not mean "Prime Councillor under H. M. the Shôgun" but is more like 'Governer at Kamakura,' and the *Gochisô no Yakunin* were not 'gentlemen-in-waiting to the Shôgun' but officers appointed to attend to the reception of the Shôgun's brother on the occasion of his visit to Kamakura.

In Nawoyoshi's speech he is made to say 'our will' where the real translation is the 'stringent command, *i.e.* of the Shôgun.

The following translations speak for themselves.

Mr. Dickins' translation.	*Our translation.*
I venture, therefore, to advise Your Excellency to rescind your order.	They ought not to be offered (to the shrine), says he bluntly.
* * *	* * *
You dare to interrupt me, Moronawo, and tell me my counsel is not seasonable.	You have gone too far when you use the word unseasonable to Moronawo.
* * *	* * *
If the contents of this coffer should be placed in the treasury without being identified, and it should turn out afterwards that Nitta's helmet is not among them, what ridicule would be incurred! Away with you!	If amongst the helmets undistinguishable which is which, we offer (to the God) that which we conjecture to be the right one, and it should afterwards prove not to be so, what ridicule would be incurred! Away with you, with your raw youngster's appearance, and your uncalled for advice!
* * *	* * *
Ho! there; take out the forty-seven helmets in yonder coffer, and show them one by one to the Lady Kawoyo.	I expected this would be so, and therefore I placed the forty-seven helmets which lay fallen and scattered (on the field) in this Chinese coffer. Cause her to distinguish among them.
* * *	* * *
She afterwards, however, picked it up and returned it to Moronawo.	Moronawo, unwilling to let any one see it, takes it up in his hand and says, "Even in returning it to me it has touched your hand."

We have not examined the remainder of Mr. Dickins version of the *Chiushingura*, but a hasty inspection of the notes brought to light a plentiful crop of blunders.

Referring to a passage in the translation in which the crows are described as "filling the air with their sweet sad song" (p. 34), Mr. Dickins supplies us with the following information.

"The Japanese, strangely enough as it appears to us, detect in the hoarse tones of the crow the notes of love." We have not been able to find any foundation for this startling statement except an abominable pun in the original *Chiushingura* on *Caw* (*!*) and *Kawaii*, 'loveable' or 'pitiable.'

Kutsuwa (p. 86) is not 'stirrup' but 'bit.'

Chô-nin, (p. 134) or 'street-people,' does not include the 'peasant' as Mr. Dickins would have us believe. How could it?

Go men (p. 157) lit. 'honorable face.' It would surely have been easy for Mr. Dickins, if he must write a note on this word, to have found out the correct derivation, viz. honorable permission. A slight knowledge of the Chinese character would have saved him from this mistake.

"A *jôruri* is a sort of dramatic prose romance." (Appendix p.3) A *jôruri* is not a "romance," but a drama, and it is only partly in prose, the choral narrative being composed in a somewhat irregular kind of verse.

"Yoshida Kenkô, a mediocre versifier." (Appendix p. 16). Our gratitude to Yoshida Kenkô for the pleasant hours we have spent over his charming book of essays, the "*Tsure-dzuregusa*" will not allow us to let this pass unnoticed. To describe Yoshida Kenkô, (better known as Kenkô bôshi) as 'a mediocre versifier' is much as if one called Swift 'a mediocre versifier,' ignoring his 'Tale of a Tub' and 'Gulliver's Travels.'

"The *Bannai*.—A *Bannai* seems to have been a captain or chief of the guard." (Appendix p. 16) *Bannai* is a man's name, not the name of an office. The *Ban* of *Bannai* has nothing to do with 'guard,' as Mr. Dickins would have seen, had he been acquainted with the Chinese characters with which this name is written.

"*Utsu, utsutsu*, 'to sleep,' 'dream' etc." (Appendix p. 39) Here the errors are closely packed. *Utsu* and *utsutsu* are totally different words, one being Chinese and the other Japanese. Neither of them is a verb, and neither of them means 'to sleep,' 'dream,' etc. *Utsu* means 'gloom,' 'melancholy,' and *utsutsu* is the 'waking reality,' a meaning nearly opposite to that given by Mr. Dickins. Dr. Hepburn has fallen into the same error, which is shared by ignorant Japanese, but the Dictionary translated by Leon Pagès from the Portuguese gives the correct meaning.

One might have thought that Mr. Dickins' success in translating the *Chiushingura* was hardly such as to encourage him to attempt the much more difficult work which he calls "The Ballad of Takasago." But we must cut short our notice of it. In a note to the first page we find the following:

"The author was one Kwanzei, a composer of *Nô*, (historical dramas with musical accompaniments, commonly based on episodes of the long feud between the Gen and Hei families) who flourished about the year 1450 A.D. The ballad is often sung, etc...."

Mr. Dickins will no doubt be surprised to learn that the Takasago, although not historical, nor connected with the wars of the Gen and Hei families, is yet actually one of those very *Nô*, which he incorrectly describes. 'Lyrical Drama' is perhaps the term which will convey the best idea of their character to English readers.

Under the impression, no doubt, that he was translating a ballad, Mr. Dickins gives us the speech which fol-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

lows the opening stanza in ballad verse, and introduces the line

"Now list ye to my lay."

On turning to the original, however, it appears that Tomonari's 'lay' is not a lay at all, but prose—downright, unmistakeable prose. Like M. Jourdain, who had been talking prose all his life without knowing it, Mr. Dickins has been translating prose without being aware of it, just as in the *Chushingura* he has translated page after page of verse, apparently without the slightest suspicion of the fact. If the absence of metre and musical notation were not a sufficient indication that this speech was in prose, there is also the word *Kotoba* noted at one side at the beginning of it, a sure sign to any one familiar with Japanese dramatic literature that this is not poetry, but one of the prose speeches of the actors. But perhaps this prose is of so elevated and ornamental a kind as fairly to deserve the name of poetry. Our readers shall judge for themselves. In the literal translation which we give below, we dare assure them that every atom of the divine spirit of poetry contained in the original has been faithfully preserved. Mr. Dickins' version is placed along with it for comparison.

Mr. Dickins' version.	*Our version.*
'Of Aso's shrine in Higo land, 'Within broad Kiushiu's way, 'The guardian Tomonari, I; 'Now list ye to my lay:	Well now! This is I, Tomonari, guardian of the shrine of Aso in the province of Higo in Kiushiu.
'Upon Miako's wondrous sights 'Not ever have I gazed 'And towards the royal city press 'To feast my eyes amazed.	Having never yet seen the capital, I have now made up my mind, and am going up to the capital.
'And by the way I fain would halt, 'And turn a space aside, 'Where Takasago's famous strand 'Fends Harima from the tide.'	Again, as this is a good opportunity, I wish also to see the shore of Takasago in Harima.

We have examined a good part of the remainder of this translation, but we shall not trouble our readers with the results, which are very much what might have been expected.

We are sorry that we have not been able to pass a more favourable judgement on Mr. Dickins' translations. It is evident that he has bestowed on them much time and labor, and no one appreciates better than ourselves the difficulties of his task. At the same time it must be remembered that the standard of Japanese scholarship has been greatly raised of late years. For one competent Japanese scholar whom we had ten years ago, there are now a dozen, and in the interests of Japanese scholarship, we feel bound to do what in us lies to prevent the standard being lowered.

Mr. Dickins has fortunately not devoted himself exclusively to Japanese studies. We understand that he is no mean proficient in several other branches of learning, and we have no doubt that in some of these he will find a less ungrateful field for his labours than the thorny one of Japanese scholarship.

We should not close this notice without a word of praise to the illustrations. They have been characteristically drawn by a Japanese artist, and convey an excellent idea of the scenes of the play as they are put upon the Japanese stage.

We learn that a telegram has been received, stating that the Hon. John Pope Hennessy, C.M.G., is to succeed Sir Arthur Kennedy, K.C.M.G., as Governor of this Colony.

This announcement will be no great surprise to the Hongkong community as Mr. Hennessy has been spoken of for a considerable period as the probable successor here of Sir Arthur Kennedy, on His Excellency's removal or retirement. Mr. Hennessy is at the present time the Governor of the Windward Islands at the entrance to the Caribbean Sea, and, in addition to being a C.M.G., is also a Fellow of the Royal Geographical Society and Knight of Malta.—*China Mail*, Nov. 16th.

ASIATIC SOCIETY OF JAPAN.

A general meeting of the above society was held in the Imperial University (*Kai Sei Gakko*), on Wednesday the 22nd instant, Sir Harry S. Parkes, President, in the chair.

The recording secretary read the minutes of last meeting, and reported that at the last council meeting H. Machida, Esq., *Hakuraku Kuncai*, and Dr. Naumann, *Kai Sei Gakko*, were duly elected members of the society; also Dr. Syle had received communications from Kobe and Nagasaki stating that the time had not yet arrived when branches of the society could be profitably established at those places.

The Library Committee intimated the receipt of several journals, also the presentation from the President of a valuable work on Old Japanese Pottery, and a pamphlet from Mr. Boyle (with map) describing the Main Trunk Lines of Railway between Yedo, Kiôto and Niigata. The corresponding secretary mentioned having received from Mr. Brunton a report issued by the English Government Meteorological Department. This report was compiled by Commander Tizzard of H. M. S. *Challenger* from observations made during the last few years at the Lighthouses of Japan. Although these observations had been somewhat severely criticized in some of the English scientific papers on account of the results shewing probable errors in some of the instruments used, still it was pleasing to find that Japan could furnish sufficient data for the production of a report at all. Another contribution Prof. Ayrton had to bring before the notice of the members was the Introduction to the book which was being written in French by their indefatigable member Dr. Geerts. This book was intended to be an encyclopædia of Japanese and Chinese Natural History. Too much importance could not be attached to this work of Dr. Geerts', since nothing could be of greater value to a man arriving in this country, desirous of studying its Natural History, than to be able at once to learn what is already known on the subject. From a hasty glance at the Introduction Prof. Ayrton had learned that petroleum was discovered in Echigo in 668 A.D., and that there was a Chinese Work on "Plants that can be used as food during a famine." Now if it be remembered what strenuous exertions the Indian Government had to make to ward off last year the disastrous results that might have followed from the Bengal famine; and if it be considered that at this very moment the Madras Government is sorely tried in preventing the failure of the monsoon producing starvation on a large scale; that but the other day the police had to be employed to quell a famine riot in Madras; it will be seen that any information regarding the substitution of some other food for rice in time of famine is of the greatest importance to a rice-eating people like the Japanese. Another class of books referred to by Dr. Geerts was works on ornamental plants. One of these, *Somoku-kinyo shu*, containing accounts of variegated leaf culture, might prove popular amongst foreign horticulturists. Mention is of course made in this Historical Introduction to Dr. Geerts' large work of Von Siebold's arrival in 1823, and of his collecting during six years, with good Japanese assistance, 2,000 specimens of plants and many animals, and of his success in acclimatizing in his garden in Leyden on his return many new hydrangias and other plants.

Dr. Syle proposed that the opportunity should be taken of recording the sense of the great loss the Asiatic Society of Japan has sustained in the death of Mr. Hatakeyama, late Director of the Imperial University, who was one of its earlier members, and to whom the Society are under many obligations for the facilities of meeting which they now enjoy. This motion was seconded by Mr. Hamao and warmly approved of by the meeting. The President sympathized with the Society in its loss of Mr. Hatakeyama, whom he had known both abroad and in his own country, where he had on several occasions to fill difficult positions. His loss he could not but regard as that of a personal friend.

The chairman then called on Mr. Aston to read his paper "On modern Shintô burial ceremonies."

Some interesting discussion followed. Professor Ayrton asked for information regarding the custom the Japanese had of wrapping white paper round the hilts of their swords at funerals. In answer to this Sir Harry Parkes thought it a

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

very natural custom, as it was merely putting a symbol of mourning on an important part of dress, and was parallel to the English custom of soldiers wearing black cloth on the arm. Mr. Aston observed that on funeral occasions the *chonin* even were allowed to wear swords, thus shewing what an important part of dress the sword was considered to be.

Professor Smith enquired whether Buddhist and Shintô ceremonies were not often mixed, and whether cineration was peculiar to one or the other of these religious systems. Dr. Syle remarked that however it might be in Japan as to the blending of Shintô with Buddhist rites, in China there was a great mixture at funerals of Buddhist with Tauist ceromonies. It had been said that as long as a Chinaman was in prosperity he was a Confucianist, when he fell sick and was in dread of death he was a Buddhist; and when his house was burnt up or some other outward calamity happened, he was a Tauist. Among the common people in and around Shanghai it was the custom for a Taondse to officiate at the house of the deceased, and as the body was carried out over the threshold he dashed in pieces with a heavy knife a bowl of earthenware—his object being to scare away the vampyre which is supposed to be waiting at the door to molest the departed. As to white being the mourning colour, the contrast between Asia and Europe was marked, for, beginning at Greece and going westward, we find black selected as the colour most expressive of the sorrow of sorrows. It was the boast of Pericles that he had never caused one family in Athens to wear black. If we knew the mourning colour among the Persians we might perhaps find a turning-point from which this noteworthy divergence commenced. At some Shintô funerals offering were made of rice, fish, fruits, wine, and flowers, and the ceremonies were remarkably impressive from their simplicity and the beautiful symbolism they embodied.

Prof. Marshall remarked that white being the mourning colour was not confined to the Far East, for even in England white was considered a mourning colour, the hearses carrying the bodies of children being covered with cloth of that colour, &c. Sir Harry Parkes also remarked that at Japanese funerals men generally wore stuff of a grayish slate colour and not pure white.

The President then accorded a vote of thanks to Mr. Aston in which the meeting heartily concurred.

Sir Harry Parkes then read the 2nd paper "On the mission to Rome in 1615 of an Envoy from the Prince of Sendai." This contained an account of a valuable old oil painting and illuminated parchment document, which was presented to His Majesty the Emperor at Sendai on the occasion of his journey to the North. The painting, executed in Italy, is the portrait of the Envoy, while the other is an interesting document which granted to him the freedom of the city of Rome. Through the kindness of His Excellency Iwakura, and as a mark of his great appreciation of the work of the Society, the President was enabled to shew these this evening to the members. The light they threw on the history of the empire at the time of the mission was listened to with great interest. Unfortunately on account of the lateness of the hour the reading of some letters, &c., connected with the Mission, had to be postponed. A vote of thanks having been accorded to the President, His Excellency Iwakura, Mr. Aston, and Mr. MacClatchie, to all of whom the members were indebted for this interesting paper, the meeting adjourned.

'The Göteborg Insurance Company have just voted a substantial sum as a reward to a Swedish boy twelve of age who has successfully navigated the schooner *Takla Maria*, of Göteborg, from Lagos to Falmouth. He is the son of the captain of the schooner. The vessel had scarcely left Lagos when his father, the mate, and some of the crew were taken ill, and obliged to remain in their beds. None of the other sailors, possessed any knowledge of navigation; but the boy, who knew how to take a solar observation, navigated the ship, and, after a voyage of six months, brought her into Falmouth, where the sick men were taken into hospital.—*Pall Mall Gazette.*

The American papers report that Professor Westbrook, after delivering a temperance lecture at Painesville, Ohio, got intoxicated, and falling in front of a locomotive was run over and killed. It is said that the professor was widely known in the West.—*Pall Mall Gazette.*

Correspondence.

JAPANESE WEIGHTS AND MEASURES.

To the Editor of the "Japan Weekly Mail."

Tôkiô, November 20th, 1876.

Sir,—Since writing my letter dated 6th instant, on the subject of Japanese weights and measures, I have succeeded in collecting material which enables me to calculate the exact equivalent of the various denominations under this class, and am now engaged in making up a table of the same, which, I trust, when ready, may prove of assistance to those who have occasion to use such figures.

Dr. Hepburn in reply to my letter gives what he now considers the correct equivalent for certain weights and measures. I, however, find his figures disagree more or less with those arrived at by myself, and believing mine to be exact, I will here give the equivalent of those particular quantities mentioned by Dr. Hepburn, hoping that he will continue to consider my remarks as well-meant, and assuring him that nothing but the interest I take in the matter, and a desire to have it finally cleared up, prompts me to take up the pen.

To find the equivalent of the *Momme* by comparison is extremely difficult; for the weights used in commerce and daily life necessarily all differ a little; hence repeated comparisons may give different results if made with various weights, though they be of the same denomination. An accurate comparison can only be made with *the Standard Momme*, kept by the Government, and even then a minutely delicate balance is required. At the Ôsaka Mint they must undoubtedly have better facilities in this respect than anywhere else in the country; and by that institution the *Momme* has been found to weigh 57.971 grs. troy. The *Fun* then is 5.7971 grs. and the *Rin* 0.57971 grs.

A *Tan* never measures less than 25 or more than 28 *Shaku Kujira*, and is now usually reckoned at 26 *Shaku*. One *Shaku Kujira* being equal to 1.25 *Kane Shaku*, the length of the *Tan* in English measure is from about 31 feet to 34 feet 9½ inches.

The *Hiki* then, taken at 2 *Jô* 6 *Shaku* to the *Tan*, is not, as Dr. Hepburn says, equal to about 52 feet, but to 64.62377 feet, or a little over 21½ yards.*

The measure of capacity called the *Go*, according to Government notification dated February 19th this year, measures 2.1 *Sun* square by 1.47 *Sun* deep, which is slightly different from the dimensions given by Dr. Hepburn. The *Go* consequently contains 6.48269 cubic *Sun*, which is equal to 11.00869 cubic inches.

The *Koku*, accordingly, contains 11008.69 cub. inches, or 39.7033 Imperial Gallons, or 4.9629 Bushels (5 Bushels less by 2⅜ pints, nearly).

The same result is obtained by calculating from the *To*, the largest measure in use, which contains 648.269 cubic *Sun*, or 1100.869 cubic inches.

I remain, Sir,
Yours obediently,
WILLIAM BRAMSEN.

GRIFFIS' "MIKADO'S EMPIRE."

To the Editor of the "Japan Weekly Mail."

Yokohama, 21st November, 1876.

Dear Sir,—In the *Japan Herald* of yesterday I observe the following letter:

To the Editor of the *Japan Herald*.

Dear Sir,—The title given to my translation of the *Hiak'-Kajô* of Iyeyas' has from time to time been objected to by implication, and more recently ridiculed by the writer of a review of Mr. Griffis' book in the columns of a local journal, who suggests that *testament* or *will* would be preferable to *legacy*. Might I ask why?

Yours truly,

Yokohama, November 20th, 1876. J. F. L.

The remark in the review to which J. F. L. objects was based on the supposition that in the title Legacy of Iye-

* In this, as in the following calculations, the *Kane Shaku* is taken as equal to 10·33 mètre, this being the equivalent fixed last year by the Department for Public Surveys. All measures are, I am told, now made to this standard. 10/33 mètre I make equal to 0.9942118687 English feet.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

yasu, the word legacy was meant to be a translation of the Japanese word by which the document in question is usually designated. In the above letter, however, I understand J. F. L. to imply that he considers *Hiaku Kajo*, Hundred Articles, to be the proper native appellation, and that the title *Legacy* of Iyeyasu is one which he himself gave to his own translation of it, irrespective of the Japanese name. J. F. L. must surely be aware than in its well established native designation the document in question is styled *Yui-jō*, which means, not legacy, but testament or will; and it was not competent for him, consistently with his duty as a translator, to suppress an important substantive in the name of the work he was translating and call it by a fanciful title of his own coinage. No doubt a valuable posthumous manuscript might, by a figure of speech, be called a legacy or even an heirloom; but in view of the fact that the correct rendering of the original name is undoubtedly testament, can J. F. L. urge any reason for substituting the word legacy, which would not equally have justified the translators of the Scriptures, had they been so wrong-headed as to misconstrue the titles of the two parts of the Bible into the Old and New Legacies?

YOUR REVIEWER.

ASAMA YAMA.

To the Editor of the "Japan Weekly Mail."

Tōkiō, November 21st, 1876.

Sir,—A short time ago a paper was read by Professor Marshall, of Tōkiō, before the Asiatic Society of Japan and subsequently published in your columns, upon a "Trip from Yedo to Kiyoto *viâ* Asama Yama." In this the writer gives a brief account of his ascent of Asama Yama and some particulars regarding the eruptions of that volcano. A few additional notes on the same subject may be of interest.

In the month of August last, I followed the route from Katsukake to Hanada on horseback, and thence by the slightly trodden pathway which leads to the crater on foot. The day was very inauspicious; excessively hot at the start, a sultry sky and not a breath of wind; yet, ere we had reached an elevation of 6,000 feet, the scene suddenly and entirely changed. Thick clouds enveloped us and a heavy thunderstorm set in, accompanied by a perfect deluge of rain, which did not abate one jot until we had covered the ascent and 1,000 feet of the descent. The view from the summit was thus totally obscured, but, on the other hand, the rain, as it rushed down the sides of the crater into the seething sulphurous mass, caused vast volumes of steam and vapour to arise; this combined with the roaring noise of the volcano and the raging of the storm, produced an effect of the wildest grandeur.

Our aneroid at the crater indicated a height of 8,800 feet, being a mean between the observation taken by Professor Marshall and another I have lately seen. The following account of the great eruption of 1781 is freely translated from a M. S. copy of a work entitled 農喩 *Nō Yu*, by Suzuki Busuke Masanaga, and as the author was an eye-witness of what he depicts, one may, making due allowance for the eccentricities of oriental imagination and calculation, accept it as a pretty truthful description.

"The dreadful famine in the 3rd year of Tenmei (1781) "was due to vast natural disturbances. The previous "winter and the following seasons were very irregular. "In winter the cabbages were in full flower; thunder- "storms frequent and the atmosphere as mild as that of "spring. It was generally expected that when spring "came the season would be a moderate one; but on the "contrary, it proved to be excessively cold—raining "always. May set in also very coldly; the people dress- "ed in their thick garments, and as they were afraid that "their cereals would be destroyed by the inclement "weather, the prices of all kinds of grain were much "raised.

"In July, Asama Yama in the province of Shinano "broke out; sand and ashes fell, accompanied by wind, "rain and sounds like those of earthquakes. The smoke "from the crater obscured the sky and heavy thunder- "storms raged continually. For a distance of two or "three *ri* around it was so dark that day could not be "distinguished from night. After a time, mud and lava "belched forth—the rumbling sound gradually increasing "in intensity. Sorely afraid were the people in the face "of calamities such as they had never before witnessed or "even dreamt of.

"The eruptions had lasted seven days and seven nights "when a fearful explosion occurred and the molten lava "swept over the surrounding country; dust and ashes being "spread over an area of twenty *ri*. Some of the rocks "ejected were of great size—measuring 78 feet in length "and 18 feet in height. Fifty-three villages and 1783 "houses which lay in the passage of the lava were de- "stroyed, and 3,078 lives lost. The current which swept "through the villages of Iwaki, Yoko, Matsuwo and "Kawara measured 18 *cho* in width, 1½ *ri* in length and "32 feet in depth.

"In addition to the disasters already mentioned, eighteen "villages were damaged."

I may add that on Asama one finds no such rest and shelter as he does on Fuji yama; not a drop of water can be procured. It is, therefore, well to arm one's self before starting with that familiar weapon commonly called a "pocket pistol"; the climb is sufficiently stiff to render it very acceptable at the end. The ride from the Wakasari-no-chaya, at the foot of the descent to Shinden, is interesting. The "silence of desolation" is around you; the north-west side of Asama, down which the great flow of lava swept in 1781, is on your left; a stream running in a deep gorge with wood on each side is on your right, whilst here and there the richness of the wild *flora* claims your attention.

Shinden is a small village, but the accommodation is clean and comfortable.

I am, Sir,

Yours, &c.

W. B. M.

BEATO *vs* THE P. & O. CO.

To the Editor of the "Japan Weekly Mail."

Yokohama, 25th November, 1876.

Sir.—In your last issue you correct your former note on the case Beato *v.* P. & O. The correction is correct, yet misleading. It is true that the Counsel for the P. & O. suggested the course of taking a verdict (not a judgment) subject to leave to move and that I agreed to that course. Before I agreed, or at all events immediately afterwards, the Acting Law Secretary read out, from what appeared to me a paper previously prepared, the three issues which were to be put to the Jury. The issues did then emanate from the Acting Law Secretary and not from either Counsel; but they were perfectly proper issues, and were as such agreed to by both parties.

I am, Sir,

Your obedient Servant,

THE COUNSEL FOR THE PLAINTIFF.

RACE LOTTERIES.

To the Editor of the "Japan Weekly Mail."

Yokohama, 20th November, 1876.

Dear Sir.—In your article of 18th instant about the Meeting of the "Yokohama Racing Association" I note the following sentence.

"The fact remains that the Association has had a very successful meeting, and has made some good rules regarding the declaration of their intentions by the owners of ponies, which ought to form part of the rules binding on any Club which may in future represent the racing interests of this community."

You are certainly under a wrong impression as to the rule "regarding the declaration of the intentions of the owners." They are only required to name the *first* event in each day for which any entered pony will run. A pony may therefore be entered in five or six events each day and declared to start for the second race: but being entered in other events, those who are not "in the secret" and don't rightly understand the "declaration" business, very naturally think they have a chance of a run for their money in some other race, when the *true* intention of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the owner has been simply to run his pony as it suited his "little book." I myself, in an unguarded moment, purchased no less than five ponies in different races on the second day, and found afterwards that the *card on which I had betted* was not in the pack on each occasion. I therefore fail to see the benefit of the new rule.

Yours truly,

A LOTTERY VICTIM.

[Our correspondent wants more than the necessary conditions of the lotteries permit. Formerly no declarations of any kind were made, and the pony owners went to lotteries to hear buyers bid for horses which those owners knew were not going to run. More than this, they could buy cheaply through agents other ponies of their own which were intended to run in the same race, but which the public did not care to buy on the supposition that the ponies previously sold were sure of winning the prizes. After the owner has declared the first event for which his horse is to compete, the public must form their own inferences, as must the owner, of what the horse can subsequently do. The owner himself cannot know certainly what the pony may be able to do, and meanwhile the declaration he has made and the obligation incurred by making it, are as large a protection to the public as the nature of the lotteries permits. A door to fraud, formerly wide open and undoubtedly often used, has been closed by the new regulation. The security is not perfect, but it is as great as can be had. The only way by which the risk of loss in lotteries can certainly be avoided, is one which we have too much respect for the acuteness of our correspondent to indicate.—ED. *J. W. M.*

Law & Police.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General.

Monday, 20th November, 1876.

Clarence Blicker was again brought up on a charge of drunkenness.

Prisoner pleaded guilty, saying he could not help himself. He had been wandering about the beach with little or no money in his pocket, and no home to go to. He could not keep himself warm without a glass of *saké* now and again, and sickness rendered him incapable of work. He was quite played out, physically.

His Honour said he was sorry for prisoner, though he could not approve of his taking, not one, but several glasses at a time; and although it was not his province to send prisoner home, he would do so, however, at his own expense, and have prisoner shipped off by next steamer to San Francisco.

W. Gannon was charged with assault on the *momban* at the rope-walk on the Bluff, on the previous night.

Prisoner pleaded guilty.

Osumi Kiuso, a Japanese constable, stated:—Last night, shortly after ten o'clock I arrested prisoner on the Bluff over Ishikawa. Mr. Grauert came to me complaining that prisoner had been abusing his servant. I went to the rope-walk and saw prisoner coming out of the place; and Mr. Grauert asked me to arrest him. I did so and brought him to the station.

Hermann L. Grauert, sworn:—Last night my *momban* at the rope-walk came to me complaining that a European had been kicking him about and striking him. He was bleeding very much, and I saw that four or five of his teeth had been knocked out. I went with him to the rope-walk, and when we reached the gate I saw prisoner coming out. He confessed having struck the *momban*, and offered me $5 to let him go. I would not do so, however, and called for the Japanese police and had him arrested.

Iski, the *momban*, stated:—I am Mr. Grauert's *momban* at the rope-walk on the hill. Last night my wife and a man named Heinrichs were talking together. Gannon was in the place, and cried "*gakomashi*," and caught up a tea-pot and flung it at my wife, but missed her. Then he caught up the *hibashi* and was going to throw it too, but I interfered, and tried to wrest it from him. He fell down, and then got up and struck me in the face with his fist. I ran away to my master, Mr. Grauert, and told him. I gave prisoner no provocation whatever.

John Heinrich, sworn, stated:—Prisoner has been sleeping at my place for some time past, and his clothes have been there also. The night before last as I was talking with the *momban's* wife he came in and had some altercation with her. Then the row commenced. He threw the kettle at the *momban's* wife and then the *momban* himself tackled on to him, and threw him. After prisoner got on his feet again, he struck the *momban* twice in the face.

Prisoner stated:—I returned from a sea-otter voyage about six weeks ago. I went in to speak to the *momban's* wife last night as I wanted to know where some clothing of mine had gone to. The *momban* himself was pretty tight, and I am very sorry this row should have occurred.

His Honour said that prisoner was an able bodied man, fit to work on any ship. He had been before the Court several times lately, and had been an inmate of His Honour's hotel more than once. He had received good advice on these occassions, but had not followed it. This time he would be imprisoned for three months, and pay the *momban* $10 damages, or in default, three months longer in prison.

IN H. B. M.'s PROVINCIAL COURT.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Saturday, November 25th, 1876.

A. JAFFRAY v. T. S. LILLEY.

Plaintiff claimed $15 for carriage hire.

Both plaintiff and defendant appeared personally.

Andrew Jaffray sworn, stated:—I am a livery stable keeper at No. 123. Mr. Lilley hired carriages from me several times. First on September 3rd, then on the 5th and 8th; these two latter items remaining unpaid. The bill was sent on board the *Sunda* at his own request, I think three times. He wrote inside the envelope that he would call in the evening to settle.

Defendant admitted the claim. He said he was 4th officer on board the *Sunda*. He had sent across to San Francisco for some money and expected to receive it on the 10th December; but till then he would not be able to pay the amount claimed.

His Honour ordered that the $15 should be forthcoming on the arrival of the *Belgic*, and that defendant should pay $3 costs besides.

THE PRIMATE'S CHARGE.

(The Times.)

The second instalment, reported by us to-day, of the Archbishop of Canterbury's Charge to the Clergy of his diocese is conceived in the same spirit as the first. He exhorts the parochial Clergy to take an enlarged view of their duties and functions, as he had before exhorted the Chapter, in the spirit, if not in the words which were once so resented in the House of Lords—"to set their house in order." The Primate is too clear-sighted and sagacious not to see that, however favourable matters may for the moment look, the National Church is in a very real sense on its defence. The attacks of its avowed enemies may be temporarily paralyzed, but the perils of the future do not wholly threaten from without; it is the Church's hold on the sympathies and intelligence of its own members which is in danger of being relaxed, and the Archbishop's main efforts are, therefore, wisely directed to the task of strengthening and renewing it. He has the sagacity to discern and the courage to avow that there are many points on which the temper, views, and opinions of the laity are at variance with those of the Clergy, and he knows that unless this breach can be promptly closed the Church may yet succumb, not from the violence of external attack, but from the indifference of some of its defenders and the rivalries of the rest. The Archbishop believes that the danger, real as it is, may be averted. He knows that a feeling in favour of Disestablishment is, to borrow his own expression, "in the air;" but he thinks it can be dissipated; and he makes one important point in relation to the general question which may be commended to the attention of the Liberation Society, and, indeed, of all who favour Disestablishment within or without the Church. "Who is to profit by Disestablishment?" he pertinently asks. It is, he seems to suppose, possible, and even probable, that Rome might become the residuary legatee of the Church. However this may be, we entirely agree with him that if the Dissenters persuade themselves that they would ever secure one tittle of the inheritance, they are under a vast delusion. "What are the Dissenting bodies that command the thousands of "our intelligent mechanics? Is there one of them that has any

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"enduring influence over the seething thought of this anxious "age?" The answer must clearly be given in the negative. There is, however, a counter question which must in fairness be asked, and that is, Do the clergy of the Established Church themselves possess that influence which their rivals lack? The answer, though given with more hesitation, must still, we fear, be No. It is, in fact, the decline of this influence which the Archbishop laments and would remedy, and his earnest counsel to the Clergy is that they should strive to recover and extend it by means of learning, piety, candour, and intelligence.

It must be acknowledged that the Primate's advice breathes a very different spirit from that to which we have been accustomed from so many clerical counsellors. The Clergy, as he truly says, cannot hope to recover their lost or waning influence by a reversion to superstitions which the world has long outgrown. Priestcraft is extinct in England, and, even if it could be revived, it would only replace one evil by a greater. Nor is minute dogmatism of any avail. Men's patience is exhausted by such theological hairsplitting as we reported last year from Bonn, and it is strange that any serious man should persuade himself that modern theological difficulties could be solved by defining anew the Procession of the Holy Ghost. Nor, again, will it do to say, as so many of the Clergy are prone to do, "Infidelity is wicked, and we will hold no "converse with it." This is virtually to give up the contest, to make a coward of the faith, and to refuse to fight even for the truth. What, then, is to be done? If we might translate the Archbishop's kindly and temperate counsel into the more trenchant language which laymen may without impropriety adopt, we would say to the Clergy, Make your learning conspicuous, your piety a shining light; treat all serious opponents with candour, all serious questions with intelligence, and with a sound appreciation of their real bearings and the influence they exercise on the minds and consciences of men; carry the war into the enemy's country, choose your own positions, and defend them with all the skill and force you can command. A mere defensive warfare is of no avail against modern scepticism. The unbeliever of to-day is a very different being from the "shallow infidel" who was so summarily demolished from the pulpits of the last generation. He may not be a formidable enemy to men who will meet him in open fight, but he is not an evil spirit to be exorcised nor a mere hobgoblin to be despised. He appeals to reason and evidence, and with reason and evidence he must be encountered and vanquished. But to do this needs patient learning, calm and sustained reflection, forbearance even with opinions which seem to deny the faith; for no controversy can be conducted without courtesy and mutual respect, adequate knowledge and intelligence, and trained skill in the conduct of an argument. If we reflect how frequently these qualities are all, or most of them, absent in the average clergyman, how very rarely they are all found in conjunction in any man, we shall appreciate the courage of the Archbishop's advice. It is the common failing of a clerical caste to prefer anathema to argument, and to condemn where it will not condescend to reason or refute. Happily, this has rarely been the attitude of the leaders of the English Church, however much the more fanatical of their followers may have urged them to assume it; nor can it be maintained with consistency by any who consent to call themselves Protestants. It is the wiser as well as the nobler course to say to the Clergy, Understand your age and you will lead it, and to abandon the old sacerdotal cry of, "Submit or be accursed." We must candidly confess, however, that we should look for greater results from such a change in the tone and attitude of the Clergy as their attention to the Primate's counsel would indicate than from any of the special measures he recommends. Theological knowledge and mental training are, no doubt, indispensable in controversy, and we are quite ready to admit that the great mass of the Clergy might with advantage be more highly educated, both professionally and generally. We regret, indeed, to find that the Archbishop, disturbed it may be by the somewhat hasty denunciations of one of his colleagues on the Bench, should show some mistrust of Oxford as a place of education for the Clergy, and give, as it were, a patent of orthodoxy to the sister University. We cannot forget that only a few months ago in the House of Lords the Archbishop expressed, with no less courage than truth, his conviction that neither University was likely to be less Christian than the nation at large; and we do not know that he has any reason for supposing that Oxford is at this moment lacking in the means and opportunities of sound theological instruction. This, however, is by the way; in our opinion it is not so much theological instruction that the Clergy need, as a spirit of intelligent harmony with secular thought. If the Clery would meet the difficulties of the world at large, they must begin by understanding them. Let them not surrender to their opponents the credit—to which they are by no means entitled—of possessing a monopoly of argument and reason. As the Archbishop says, their position is strong if they will only defend it like men; but they need to use the weapons of to-day, and no longer to put their trust in the obsolete armoury of bygone times.

As we said the other day, the condition of things is undoubtedly serious when even an Archbishop can regard Disestablishment as a possible issue, and when a leading statesman can ask, "Is the "Church of England worth preserving?" But it is no discouraging sign when the leaders of the Church know the dangers which beset them, and are prepared boldly to confront them. "The "seething thought of this anxious age," as it is well called by the Primate, has many tendencies which may properly cause apprehension to all thoughtful men, and we discern no sign that any Nonconformist body has the slightest command over them. Can they be met by a return to the superstitions we have long shaken off, and by the *bizarre* condemnations of the Syllabus? The common-sense and the unshaken Protestantism of the vast majority of Englishmen answer emphatically in the negative. Yet we cannot forget that the pride of Ultramontanism is unabated, that its aggressions are unrelaxed, while its pretensions were never so great as they are now. The contest with Rome was fought out by the great Anglican theologians of the seventeenth and eighteenth centuries, who were never afraid to meet their adversaries in debate. The contest now is not so much with Rome as with the more aggressive forms of scepticism and unbelief, but it must be waged with the same weapons of reason and trained intelligence; and if the combatants show the same vigour and earnestness, they may await the issue with no less confidence than their forefathers. Above all, they must not be alarmed at freedom of thought and investigation. The Archbishop struck one false note when he referred with something very like contempt to the "observed "traces of primæval man in some distant cave." The merits of that asserted discovery are quite another question; but we are jealous of a suggestion which gives a pretext for suspicion that there is anything in the constitution or traditions of the English Church to prevent it profiting by an advance of human knowledge. We are anxious to do all reasonable justice to the energy, benevolence, piety, and real self-sacrifice of the great mass of the English Clergy, but at the same time we feel it a simple duty to enforce on the rulers of the Church, as well as the rank and file, the Archbishop's own warning that the immediate perils which beset the Church are only to be met by courage, by charity, and, above all, by intelligence.

"GARMENTURE."

(The Saturday Review.)

Five and twenty years ago the celebrated Mrs. Amelia Bloomer made an effort to revolutionize the dress of her sex. The notice which attended the movement was out of all proportion to its results. Bloomer costume became famous, indeed, but was not adopted; for the simple reason that it was ugly in itself and unbecoming to the wearer. So the movement died out for the time; but now, with a new generation, it seems to be reviving. Once more an agitation is started in favour of the right of women to shape their coverings in accordance with the laws of health and comfort. Some members of the advanced sisterhood in America have instituted a society to be called the "American Free Dress League." If the costume they propose is as awkward, extravagant, and ungraceful as the language in which it is advocated, we may safely prophesy for it the early fate of Bloomerism. But the programme may speak for itself. In Mrs. Bloomer's day American as a language had not reached its present state of perfection. When she exhorted her friends to "do just as their impulses moved them to do," to cast off whatever they "found a burden, either in belief or apparel," and to fit themselves "for a higher sphere, instead of grovelling in the dirt," her expressions are fairly intelligible, if rather highflown. But the modern reformers put their thoughts that breathe into words that burn, or rather smoulder, with an irrepressible fire. "Whereas," they begin, the present fashionable dress is "unnatural and incompatible with health and exercise, is never likely to be consistent, and would not remain so if it could reach that point," it is to be repudiated by all friends of humanity. What the point is at which consistent dress would remain so appears to be a dark secret, buried in the bosom of these ladies of Philadelphia. But they go on with another and even more imposing "whereas." Fashionable dress is condemned as "inhuman in form, in the infliction of obstacles to locomotion and respiration"; and in the first resolution they advo-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

cate its abolition;" in order to "obtain true lives and equal opportunities in the pursuit of happiness"—equal to whose opportunities we are not informed, but no doubt there is a covert allusion to "another sex." The ladies proceed to say that their object is, further, "to elevate woman above slaveries and pernicious habits;" and they undertake to "reason with her, admonish and entreat her to cease accepting"—or, as we should say, in England, refuse—"bodily burdens, licentious and murderous inventions"—excellent advice, but apparently not addressed to those American women who use revolvers and bowie-knives. The murderous inventions spoken of are to be exchanged for "comfort-favouring, labour-lightening, and life-preserving garments." This is no doubt as it should be, and another resolution is worthy of it. "Women," we are told, "have duties in relieving the world of poverty," Their "extravagant and debilitating costume" is the "most fertile cause of human ills"—an assertion which has been made on other occasions, if we mistake not, regarding drink, Sabbath-breaking, slavery, the Divorce Court, and many other human ills; but the ladies of Philadelphia go on to assure the world that, without reform in the matter of clothing, which they describe as "this effort for prosperity, liberty, and equity," all other reforms "are abortive." With all this tall talk they are not disposed to leave this world without a definite proposal. They state the disease in language which is here and there vague, not to say obscure. But there is no obscurity in their proposed remedy. That is perfectly clear. The fertile cause of human ills is to be reached by—trousers. The reformed "garmenture," we read, "should be of dual form for the legs." Petticoats, it seems, are the fertile source indicated above. Garmenture for the legs of a dual form is to be the remedy. True, breeches were never called by so fine a name before, but there is no reason why they should not fit as well and be as useful under this designation as any other. A little further on the ladies do not scruple to use the more vulgar term. "The prejudice," they say, "against trousers for women is based on ignorance and tyranny,"—again there is a dig at the other sex—"is fostered by many vicious and sordid motives, and ought to be banished from the earth by the full sanction and fearless effort of all good people." This full sanction is not, however, to be easily obtained. At the second day's session of the League, as reported in the *Times* of Wednesday last, there were two forms of opposition to the movement. Mrs. Dr. Atwater could not afford to wear trousers. Her husband was a professional, though a liberal, man, and she herself had to earn her bread, and she feared that she could not afford to wear such a dress. Much comfort and encouragement was lavished on this weak sister, and the meeting passed on to encounter the second form taken by the opposition. Mrs. Merriwether, of Tennessee, made the frightful and unfounded assertion that women are generally valued for their personal appearance—a shocking statement which naturally threw the Congress into an uproar. But Mrs. Merriwether held her ground. She could not ignore the relations of life, thought it better to submit than to pain those around her, and gave utterance, in particular, to this noble sentiment—"I consider that I have more influence in the world in a trailed skirt." And no doubt she has. Influence must be sadly wanted by the members of the Free Dress League if they have to seek it in trousers. Mrs. Merriwether, in throwing the apple of common sense into the meeting, met with no support, and the League "hurled defiance" at Parisian fashions, decreed the universal use by American women of "garmenture of a dual form," and adjourned *sine die*.

Revolt against Parisian dictation in the matter of female attire exists on this side of the Atlantic as well as at Philadelphia. So far as we know, it has not taken the "dual form." The rebels are more moderate, though they object either on æsthetic or utilitarian grounds. Members of the æsthetic class complain that they might do more for the improvement of dress, but that their camp is divided by different feelings with regard to art. Some of them affect the costume of one school or period, some that of another and a party at which many meet is like a fancy ball. One lady regrets that, like Mrs. Dr. Atwater, she has not the courage to obey the principles of which she most warmly approves. Her dress is that of the time of Henry IV.; but where are the horns? She dare not wear them, but looks with contempt at the mustard-coloured sack and turned-up hair of an admirer of Queen Anne. The devotees of the præ-Raffaellite movements, who mix in wild profusion everything faded, and talk learnedly of the delicious harmony of tertiaries, have no admiration for the thin lady who has taken her under-garment as a pattern, lengthened it indefinitely in workhouse sheeting, trimmed it with gold braid, and called it Grecian. Such are the rivalries of celestial minds; but, so far, a dual garmenture has not been mentioned, and trousers are still reckoned among Turkish atrocities. The pratical side of the dress question is represented among us by fewer advocates; but there is the old lady who boasts that she has survived crinoline, and worn the same pattern of gown for forty years; and there are well-dressed Quakers, Sisters of various degrees of uniformity, and people who, without making any particular profession of faith, put their waists where nature intended waists to go, wear skirts that neither trail on the ground nor show their ancles, and sleeves neither stiffened with whalebone nor so tight as to impede the motions of their arms. The great mistake of the present custom of following the fashion is, that ladies seem to bow to the dictation of some one whom they would scorn to follow in anything else than dress. The caprice of a great lady who has something to show, or else something to hide, is made to regulate the dress of people in the furthest corners of the world. To some extent there has, in England and Germany at least, been a movement towards emancipation of late years. Sedan was not the victory of Prussians over French alone, but also of taste over vulgarity. That it should be a social crime to wear the same dress twice was the necessary result of such examples as were set in the days of the Empire, and all the richer fabrics—brocades, velvets, and such like—were little used. Dressmakers habitually regard the bodies of their customers as they regard the wire frames and lay figures which stand in their showrooms. They look on a human being as simply a prop for the display of so many yards of material, and never think of dress as a protection from cold, as an enhancement of the beauty of a form, or as a means of concealing its defects. There can be no question that we might be the better of costumes for women in this country. Political movements, strange to say, have done much to extinguish them among the lower classes. Smock-frocks are becoming scarce. The squire is not better dressed than his ploughman on Sunday, and the idea that we are all men and brothers has acted so as to make the workman ashamed of his clothes. Signal failure attends the attempt to give domestic servants a distinctive dress; for though footmen are obliged to wear the livery assigned to them, the housemaids cut away their caps and aprons until they are imperceptible, and adorn their ears and hands with rings. In ordinary girls' schools a uniform would prevent many heart-burnings and jealousies; and, in truth a much plainer fashion of dress would be found becoming by nine-tenths of the ladies who now disfigure themselves with so-called "Paris Fashions." One day lately, soon after the reopening of the National Gallery, when the rooms were full of people in second-rate milliners' costumes, fresh as they fondly believed, from Paris, there entered two ladies whom it was impossible not to welcome, so satisfactory was the effect of their "garmenture." Plain, flowing skirts of black serge, large white collars and cuffs, neatly fitting bodices, harmonized well with the surroundings. With them was a clergyman in a cassock and a broad-brimmed hat, and a child in soft unstarched muslin. The whole effect of the group was singularly pleasing, partly from the repose given to the eye by the plainness of the dress amid the frills and furbelows of the bystanders, and partly from the enhanced effect of the pictures, whose colours derived new brilliancy when contrasted with the folds of soft black. One is almost tempted to wish that a mourner's cloak should be given instead of an umbrella ticket to people who visit the Gallery. The effect of discordant colours is as painful to a sensitive eye as is loud talking at a concert to a delicate ear. The audience do not bring their own penny whistles when they assemble to hear good music.

But in one respect our American sisters are right, so far at least as their meaning can be made out under the veil of words in which they have disguised it. Modern fashionable dress is "inhuman in form." Whether a "dual garmenture" is more natural for the legs than a petticoat is a question. But it is no question that the proper cultivation, support, and development of the human frame by dress would tend to improve the appearance of all our clothes. If these things were considered to be of primary importance, then beauty of costume would follow by natural sequence. If the folds of our clothing, and especially of female clothing, followed the lines of the form, instead of distorting them—if graceful drapery were the first object aimed at—there would no longer be questionings as to long waists or short waists, crinolines, stays, or straps. Pleasing combinations of colour can be made more easily with stuffs in large masses, arranged with as little of sewing as possible. Instead of seeing Indian shawls made up into "costumes" and "polonaises," we should like to find our female friends learning how to put them on to the best advantage in loose folds; and if models are not to be found among the monthly bulletins of the Parisian milliners, let a visit be paid to the British Museum, and a morning spent in studying the exquisite draperies of the little Tanagra terracottas, the most beautiful fashion models we shall ever see.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Our market is very dull and prices in most instances are quite nominal. The transactions in *Yarns* have been very small and quotations are lower; at the close there is, however, a slight enquiry for 16-24 *Yarns* to arrive. Shirtings are in a much depressed state, and even at the reduced quotations only small sales can be reported. For *T. Cloths, Drills, White Shirtings, Velvets, Turkey Reds* and *Taffachelass*, there is no demand.

Grey Shirtings:—							White Shirtings:—	
7 lbs	38½ yds	39 in.	per pce.	$1.50	to	$2.00	60 to 64 reed 40 yds. 35 in.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	2.00	to	2.40	Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb. 0.77½ to 0.97½
8 lbs. 4 to 8 lbs.	38½ ,,	39 in.	,,	1.75	to	2.12	Black Velvets	7.75 to 8.75
9 lbs	38½ ,,	44 in.	,,	2.35	to	2.75	English Drills 15 lbs.	40 yds, 30 in. 2.60 to 2.70
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40	to	1.60	Taffachelass	12 yds, 48 in. 2.00 to 2.25
,, 6lbs.	24 ,,	32 in.	,,	1.10	to	1.25		

Yarns.—

No 16 to 24	per picul	$29.50 to 32.00	No. 38 to 42 per picul $38.50 to 41.50
No. 28 to 32	per picul	$30.50 to 37.50	Reverse Twist 16-24 ,, $32.50

Woollens.—The market remains quiet and quotations unaltered. A demand for *Blankets* has sprung up, 6lbs. to 7lbs. being especially asked for at 47 to 48 cents per lb. Deliveries are more satisfactory, and therefore a better business may soon be expected.

Plain Orleans	40—42 yds	32 in.	5.55	to	7.00	Figured Mousseline de Laine	30 yds.	30 in. 0.27 to 0.32

do. in basket	,,	$3.60	Swatow Brawn	,,	$3.40
China No 1 Ping-fah	,,	$7.75	Daitong	,,	$3.65
,, No 2 Chung-pak	,,	$6.90	Japan Rice		$2.30 to $2.35
,, No 3 Ke-pak	,,	$6.20	Kerosene Oil		$3.80

Kerosene Oil.—The market is without change, with fair demand for consumption at about $3,80 per case.

EXPORTS.

Silk.—Our report for the American mail of to-day's date is to the following effect:

Since the 15th instant the market has been considerably depressed by the advices received from Europe. Arrivals have been in excess of settlements and we have to report a heavy fall in the prices of all except the superior qualities of Silks.

Settlements are about 400 bales and the stock has increased to 3,500 bales. Shipments are 449 bales, making the total export since the 1st July 16,378 bales against 8,005 last year for the corresponding period..

	At Exchange 4 2½ in London.	*At Exchange 5.35 at 6 m.s. in Lyons.*			*At Exchange 4/2½ in London.*	*At Exchange 5.35 at 6 m.s. in Lyons.*

,, White, Good to Best	$0.75	to	$1.00
,, ,, Common to Inferior	$0.50	to	$0.65

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tea.—A moderate business has been done during the closing week, but nothing calls for any market comment. Prices remain unchanged and holders rather firm in their demands. Settlements for the period amount to 1,800 piculs, whilst stocks, unsupported by a fair proportion of arrivals, are greatly diminished and comprise only a moderate selection of desirable parcels.

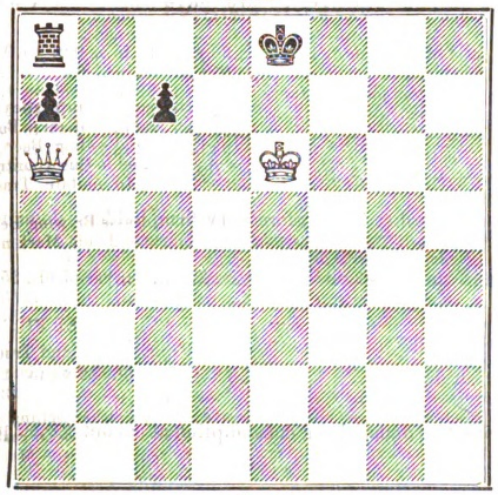
PROBLEM

BY MR. S. LLOYD.

BLACK.



WHITE.

White to play and mate in 2 moves.

SOLUTION OF LAST WEEK'S PROBLEM BY MR. S. LLOYD.

The Pawn at Q.'s 6th took a Pawn *en passant*, instead of which White should play Q. to B.'s 3rd, mating.

Correct answer received from W. B. M., Tôkiô.

Erratum.—For first answer to solution last week of Herr Kohtz's problem read—

White.	Black.
1. Q. to K.'s sq.	Q. takes Q.
2. R. to Q.'s 4th, mate.

TAMSUI DISTRICT.

Coral Patch off the Entrance to Keelung Harbour.

THE following information has been received from Vice-Admiral A. P. RYDER, Commander-in-Chief, China Station.

"H. M. S. *AUDACIOUS* when leaving Keelung Harbour, Formosa, in May last struck on a CORAL PATCH, unmarked in the Charts. The position of this patch has since been determined by H. M. S. *LAPWING*, and is as follows:—

100 Foot Rock (Keelung Island)...S. 74° E.
Macedonian Point .....S. 3° E.
Brooker Point.....S. 27° W.

This patch is about 150 to 200 yards in extent with least water 3½ fathoms (reduced to low ordinary springs), soundings varying from 5 to 9 fathoms on the patch.

The bearings given show the exact position of the 3½ fathoms patch.

By order of the Inspector-General of Customs.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)
"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 49.] YOKOHAMA, SATURDAY, DECEMBER 2, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted at this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The City of Tōkiō, the scene of so many calamities, has again been visited with one of terrible proportions. A fire broke out on the night of Wednesday last, not far from the Nihon-bashi, and spread rapidly under the influence of a brisk wind. Before morning dawned, an area of something like two and a half miles square had been cleared by the flames, and upwards of seventy streets, composed of over eight thousand houses, destroyed. Allowing an average occupancy of six to a house, fifty thousand persons of all ages must have been rendered homeless, and when regard is had to the number of sick, of very young and very old, embraced by such figures, a sad picture of human misery is produced on the mind. The people bear up with their usual patience and fortitude, and means have been organized for the relief of all immediate distress. But the blow is a crushing one, and will alter the whole complexion of very many lives. It is difficult to estimate the value of the property destroyed, but it can be little under five millions of *yen*, and this is a not inconsiderable sum for a poor country, especially when taken from a small area. The number of lives lost has not been accurately ascertained, but we have no reason to think it very large. Advantage will be taken of the occurence by the Government to lay out the ground in an improved manner, and make the whole neighbourhood less liable to similar disasters in future. Incendiarism is suspected—we know not whether on strong grounds—and the man on whose premises the fire broke out, a government hay and straw contractor, is said to be under examination by the police.

It is not very much that we foreigners can do to relieve all this distress, but we must do what we can. A subscription list has been opened at the *Japan Herald* office for the relief of the sufferers, and we shall be glad to see it handsomely filled up.

After we have endured darkness in our streets for upwards of a year the Gas Committee are at length making an effort to have them relighted. The original agreement with the Gas Company was not renewed on its expiration, owing to the fact that the Committee found it impossible to induce the Company to reduce the rate charged, which was naturally considered to be excessively high. The determination of the Committee, which a year's darkness in our streets has not weakened, not to submit to this excessive rate, combined with the complaints made by private consumers of the high price they had to pay for an inferior article, have at length compelled the Company to reduce the price 10 per cent. on that formerly charged. This is by no means an important concession, and compares unfavourably with the rate charged in America, where certainly the cost of production should be higher than it is here. In America we find the highest rate charged is in Chicago, where the price per 1,000 feet is exactly the same as it will in future be here, viz., $3.37½, whereas in New York it is only $2.75, and in Boston $2.50. Moreover the quality of the gas made here will not bear comparison with that made in western countries, but as we understand an improvement is contemplated in the quality of the coals used, we hope some increase in the illuminating power may very soon be apparent. A paragraph in this paper some time ago drew from the Gas Committee an explanation of their reasons for not wishing to treat with the Gas Company unless the expense of lighting the streets could be reduced; they appear to have been actuated by a feeling that the requisite amount to cover the cost would not be forthcoming from the community, but we really hope that they may find themselves mistaken, and that, when the agreement is sent round for signature, every resident will pay without a murmur his *pro rata* contribution, based as formerly on the rental value of property, which is, we believe, now being specially assessed for the purpose. The amount required will be $420 per month, but the Committee contemplate trying for a further reduction in the cost by dispensing with the lamps for about seven days in the month, on such nights as the moon gives all the requisite light. This, however, is a matter which requires careful consideration, and in our opinion it would be far better to ask the community for such a sum as would cover the expense of lighting for every night in the year, and if any extraordinary saving is effected on the cost for the whole year, the balance on hand might enable the Committee to levy a lower rate for subsequent years.

Circumstances have obliged the Amateur Dramatic Corps to relinquish their intention of putting *The Overland Route* on the stage this month, but with a view of providing a seasonable representation for their supporters about Christmas time they have substituted *The Critic* and Arthur Sullivan's *Cox and Box*, which are now in active preparation. Both these pieces have, it is true, been presented to a Yokohama audience before, but they possess such unquestionable sterling merits as to justify repetition. The desire to provide some Christmas entertainment for the public is another reason for their selection, as they offer facilities to the Corps for prompt representation which entirely new pieces would not afford.

A measure has been sent up by the *Genro-In* to the *Daijokwan* recommending that bail be accepted from accused persons for their appearance on the appointed day of trial. It can hardly be doubted that the measure will pass into law.

We have been informed to-day by the Agent of the Great Northern Telegraph Company that the cable between Singapore and Batavia has been repaired, and consequently all lines are now in good working order.

From the "Japan Mail Daily Advertiser."

Monday, 27th.

H. I. G. M.'s frigate *Vineta* has returned to port from a trip down the Bay for general practice.

From the *Chôya Shimbun.*

NOTIFICATION No. 144.

It is hereby notified that the Government has decided that the postage to Fusan in Corea will, for the present, be the same as that throughout Japan.

SANJÔ SANEYOSHI,
Daijô-Daijin.

From the same.

A fire broke out in the stables of the Kumamoto garrison at 3 a.m. on the 24th instant, which spread to and destroyed two barrack buildings. The fire originated from a lamp being upset.

From the *Nichi Nichi Shimbun.*

While three men in the employ of the Navy Department were sweeping up the drill grounds at Yettchu-jima, Tôkiô, on the 23rd instant, they found a shell, and thinking it would be dangerous to leave it there without taking the powder out of it, they commenced hammering it for that purpose, when it exploded and seriously injured all of them.

From the same.

There are now about 100 of the Akidzuki insurgents confined in prison at Kumamoto.

From the same.

The M. B. S. S. Company's steamer *Takasago Maru* is to be converted into a sailing vessel as her hull is sufficiently sound, for which purpose her worn out machinery is to be taken out of her.

From the same.

His Majesty the Mikado did not make his appearance at the *Sei-In* on Friday last, on account of a great entertainment which took place at the Imperial palace the previous night on the occasion of the rice harvest festival.

From the *Hôchi Shimbun.*

Three hundred sheep have recently arrived from China, which are to be sent to the farm of the Bureau of Agriculture at Shimôsa.

From the *Mainichi Shimbun.*

The price of coal here in Yokohama is about 7 *yen* per ton, but the finest quality of Karatsu coal costs at Nagasaki only 3 *yen* per ton, and consequently many merchants have sent to that port to make purchases.

The P. M. S. S. Co.'s steamer *City of Peking* left for San Francisco yesterday morning, taking the following cargo of Tea:—

TEA:

From	San Fran.	N. York.	Other Cities.	Total.
Shanghai	—	435	1,416	1,851

Tuesday, 28th.

H. E. Iwakura, left for Kobe yesterday evening in the M. B. steamer *Tokai Maru.*

From the *Hôchi Shimbun.*

Mr. Sazajima, the manager, and Mr. Ariyoshi, the editor of the *Tekka Shimbun*, were tried at the *Saibansho* on the 24th instant for an infraction of the Press-laws, in having published a certain article in No. 15 of the issue of that paper.

From the same.

Mr. Tomita Tetsunosuke, the late Japanese Vice-Consul at New York, has been appointed to the post of Consul-General at Shanghai in place of Mr. Shinagawa, who returns to this country.

From the same.

The Tôkiô Hospital will be removed on the 27th instant to the new buildings which have been erected for the purpose at Hongô gochome.

From the *Chôya Shimbun.*

We hear from Shimane that Mayebara and seven subordinate leaders of the late insurrection have been removed from that *ken* to Yamaguchi *ken.*

From the *Nichi Nichi Shimbun.*

It is expected that Her Majesty the Empress Dowager will visit Kiôto this winter. She will travel by sea, and will probably leave the capital before the end of the year.

From the same.

The Government has awarded the following sums to the officers and men of the Imperial Army who took part in in the Kumamoto engagement:—To one officer of the 3rd rank, 100 *yen*; to one of the 5th rank, 60 *yen*; to one of the 7th rank, 35 *yen*; to one of the 8th rank, 25 *yen*; to one of the 9th rank, 20 *yen*; to 9 of the 10th rank, 15 *yen* each; to 16 of the 12th and 13th rank, 12 *yen* each, and 15 *yen* each to 1[illegible] privates.

Wednesday, 29th.

We have received from the Railway Department a copy of the new time table which is to come into force on the 1st proximo. No alteration has been made in the down trains but those from Yokohama leave four minutes after the corresponding time of departure from Tôkiô, with the exception of the first train in the morning, which leaves Yokohama station at 7.1, and the last train at night which leaves at 11.25.

The special passenger traffic between Shinbashi and Shinagawa commences on the 1st proximo, ten trains are to be run either way during the day, taking just ten minutes to accomplish the journey.

From the *Nichi Nichi Shimbun.*

Her Majesty the Empress Dowager had arranged to visit Hama-goten on the 27th instant to witness hawking, as the wild fowl which frequent the ornamental waters there offer good sport in this respect, but the unpropitious state of the weather necessitated a postponement of the intended programme.

From the same.

Mr. Ariyoshi, the editor of the *Tekka Shimbun*, was sentenced to ten months' imprisonment and a fine of eighty *yen* on the 27th instant, for having published a communicated article criticising the justice of the sentence of imprisonment passed on Mr. Hokiyama, the editor of the *Nichi Nichi Shimbun*, for a violation of the Press-laws. Mr. Sasashima, the writer of this communicated article, was also sentenced to three months' imprisonment.

From the same.

A fire broke out in Kakigara-chô, Tôkiô, at 3.30 a.m. on the 27th instant, which destroyed six houses.

From the *Chôya Shimbun.*

The *Kumamoto Shimbun* up to the time of the insurrection had a circulation of about 300 copies only, but since that event its daily issue has been increased to 5,000 copies. Previous to publication all matter relating to the late insurrection has to be submitted to the inspection of the *Kencho* officials.

From the same.

We stated a short time ago that an Infant Asylum had been attached to the Female Normal College in Tôkiô, and have now to announce that the applications for admission have been so numerous that the Asylum is at present quite full, and it is therefore proposed to open branch establishments in various parts of the city in order to accommodate the numbers who thus seek relief.

The Steam-ship *Ajax* left Singapore for Hongkong on the morning of the 17th instant.

Thursday, 30th.

We this morning received a telegram announcing that a most destructive fire occurred in Tôkiô last night, which broke out near the Nihon-bashi and has cleared an area extending from that bridge to the Kiyobashi in one direction and from the Castle moat to the canal next to the sea in another. The foreign Concession has suffered; the Austrian

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Legation, and the premises belonging to Messrs. Kniffler & Co., M. Clutaud, M. Joseph, and the Tsukidji Restaurant having been burnt, together with the numerous houses which were in the occupation of Chinese. It would appear that the number of houses destroyed exceeds that of the great fire of 1870, and last night's conflagration is characterized as the most serious which has ever occurred in the capital.

In the U. S. Consular Court yesterday, a Chinaman named Sam Kee was accused by a Japanese woman, Tomita Taki, with having stolen $15 and some clothing from her house in Homura. As there was no evidence in support of the charge brought forward, the accused, who said he was a servant on board the U.S.S. *Vantic*, was discharged.

From the *Chôya Shimbun*.

Japanese productions sold at the Philadelphia Exhibition from the 10th May to the 30th September have realized as much as $83,909.52, and Japanese goods sold at shops outside the Exhibition have realized in addition $74,203 27.

From the same.

The circus now open at Iida machi, Tôkiô, attracts as many as 3,000 visitors daily.

From the same.

The Government recently issued an order strictly prohibiting the sale or purchase of arms and ammunition, but which has now been rescinded.

From the *Nichi Nichi Shimbun*.

It is said that the departure of the Mikado for Kiôto will take place about the 20th of January, when His Majesty will proceed in the *Takaco Maru* direct to Osaka.

From the same.

We have heard that the men of the Imperial army who were wounded at Kumamoto are nearly convalescent, and it is expected will be able to leave the hospital by the end of this month.

From the *Hôchi Shimbun*.

We hear that the present bamboo water pipes in the city of Tôkiô are to be replaced by iron ones, an order for which has, it is said, been sent to Europe. The length of piping required will be about 40 *ri* or 100 miles.

Friday, 1*st*.

It may perhaps be well to state that our law reports are those of our reporter, and that they are not, and have not been, taken by the Manager of this Journal from any other newspaper whatever. It is probable that as there is among reporters more or less of that *camaraderie* which their avocation naturally involves, one may sometimes borrow from another; but this ill justifies any charge of piracy—a charge which in the present case is amply refuted, so far as the Manager of the Paper goes, by the fact that the full original of the law report in question, as sent us by our reporter, is before us at the moment of writing these lines.

The St. Andrew's Society met last night at the Grand Hotel to celebrate their patron Saint's day in the usual way. Members and guests numbered about fifty in all, and sat down punctually at seven o'clock to a capital dinner. The usual toasts succeeded, and some good speeches were made, the most noticeable being that of Mr. Fraser in proposing "The Land o' Cakes"; that of Mr. Thomson in proposing "The Bards and Authors of Scotland," which abounded in happy similes and allusions; those of Messrs. Russell Robertson and Dickins in replying for "The Bench and the Bar," and that of General Van Buren in returning thanks for the toast of "The Guests."

The fire which devastated the busiest part of Tôkiô the night before last, broke out shortly after 11 o'clock at a house close to the Gofuku-bashi, a bridge which crosses the outermost moat of the Castle in the immediate neighbourhood of the Nihon-bashi. Unfortunately a strong wind sprang up just about the same time, which caused a spread of the flames with a rapidity which defied all efforts to extinguish them. Their course was in the direction of the wind from the point where the fire broke out towards the sea, clearing the whole of the immense space from the outer moat of the Castle in a south-easterly direction to the foreign concession at Tsukiji, which lies between the canals crossed by the Nihon-bashi on the northward and the Kiyobashi on the southward. There seems to have been no proper organization of firemen to endeavour to stop the progress of the flames, though perhaps any efforts to do so, no matter how well directed, would have been useless in the teeth of the gale of wind which blew. Foreign made fire engines were numerous but unserviceable, as no sooner had one taken up a position than it had to be abandoned for a place of safety from the advancing fire. The police were helpless, and the troops were not called into requisition. The utmost confusion of course prevailed. The owners of houses did not like to abandon them until the flames were actually upon them, when property was thrown into the street and a rapid flight necessitated.

The wind drove the flames on with fearful swiftness. One moment and fine large business premises were standing intact; in a few minutes nothing was left of them but the fire-proof godown. The whole of the O-dori, or Main street, between the Nihon-bashi and Kiyo-bashi has been cleared, leaving only a few damaged buildings standing of all the fine shops which lined either side of that great artery of traffic. The entire district of Shimabara has been swept away, and nothing remains of the immense theatres which formerly stood in that quarter, but a few—and very few—charred beams. An eyewitness says that these great buildings utterly disappeared in a quarter of an hour after they first caught fire. The flames were so fierce that little debris is left, everything at all inflammable having been literally devoured, but so exceedingly rapid was their progress that the fire-proof godowns have in almost every instance been left standing and hardly damaged. The area destroyed by the fire is estimated at about 50 *cho*, and may much exceed that space. The foreign concession at Tsukiji has greatly suffered. All the buildings at the north-west corner have been swept away, and at times many of the foreign houses on other parts of the concession were set on fire by the showers of burning shingles which were driven about by the wind, and it was only by great vigilance that some of these were saved. It is said that the Austrian Legation was destroyed because the servants deserted it when their care was most needed. Now the only thing left of it is the escutcheon bearing the Imperial arms, which was yesterday hung in solitary grandeur on a tree standing over the ruins. We believe that no official return has yet been made of the number of houses destroyed or the lives lost, but the latter must have been great, as not only were people crushed by the falling houses, but in some instances partially burnt bridges are reported to have given way with crowds on them, which caused the death of numbers.

It was strange to note yesterday the apparent apathy and indifference of those who had lost nearly everything. In numbers of cases families were to be seen who had collected together what few of their household effects had been saved, and having rigged up a temporary screen were sleeping over the ruins of their homes. Carpenters by hundreds were busy rebuilding while yet the sites on which they worked were smoking, and all sorts of methods had been used to mark out the boundaries of the various lots. Of course much misery will result from this disastrous conflagration, and it is not known yet whether the Government is doing anything for the relief of the sufferers, but we notice that one of our contemporaries has taken an enviable opportunity of starting a subscription in their behalf, to which, no doubt, the foreign community will liberally subscribe.

The M. M. steamer *Tibre*, with French Mails on board to the 22nd October, will leave Hongkong for this port tomorrow, the 2nd instant, at 6 p.m.

From the *Chôya Shimbun*.

NOTIFICATION No. 146.

It is hereby made known that the words "or at indefinite times" in the second clause of the II article of the Press-laws

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

issued according to Notification No. 101 in June 1875, are hereby expunged.

The duly licensed newspapers or magazines which have hitherto been published irregularly, must fix definite dates for their publication, and give information of the same to the various *Kencho*, in order that such may reach the *Naimusho* within twenty days from the official receipt of this Notification. Newspapers failing to comply with this order will be suspended.

SANJÔ SANEYOSHI,
Prime Minister.

November 28th, 1876.

From the same.

NOTIFICATION 147.

As the celebration of the tenth anniversary of the death of Kômei Tenno* will take next year, Her Majesty the Empress Dowager will start for Kiôto on the 8th of January 1877, travelling by the Tôkaido.

SANJÔ SANEYOSHI,
Prime Minister.

November 29th, 1876.

From the same.

Her Majesty the Empress Dowager went to the Rikiu Palace at Shiba, Tôkiô, and there witnessed fishing with rods and nets.

From the *Akébono Shimbun.*

It is estimated that 16,000 persons will visit the capital next year from various parts of the country, in order to exhibit articles at the National Exhibition, and one hundred hotels will be prepared for their special accommodation.

From the *Nichi Nichi Shimbun.*

The number of guns to be fired when saluting has been settled as follows:—

For the Members of the Imperial family.....	21 guns.
For the *Daijin*, an Ambassador or Envoy Extraordinary.....	19 ,,
For a General, Admiral, Minister of the Army or Navy Department, and Minister Plenipotentiary.	15 ,,
For a Lieutenant-General, Vice-Admiral, and Commissioner.....	13 ,,
For a Brigadier-General, Rear-Admiral, and Chargé d' Affairs.....	11 ,,
For a Colonel, Post Captain, and Consul General...	9 ,,
For a Consul; and in replying to the salutes of commanders of ships.....	7 ,,

Officers below the rank of General, when in command of an Army or a Fleet, shall be saluted with two additional guns. When any member of the Imperial family is doing duty in the Military or Naval service, he shall be saluted according to his professional standing, without regard to his Imperial rank.

From the same.

The Bureau of Police *(Keishicho)* has supplied mostly all the police station in the capital with foreign fire engines.

From the same.

Three men who were in the police service of Chiba *Ken* (Shimôsa), and who had conspired with Nagaoka, the leader of thirteen *samurai* who were arrested at at Shian-bashi, Tôkiô, have been arrested and brought to the capital.

From the *Mainichi Shimbun.*

The *Niigata Maru*, after having her machinery taken out, will be laden with rice and despatched to London about the middle of next month.

From the same.

A foreign shaped cargo boat, about 92 feet long and 15 feet beam, was found floating near the Sagasami-bashi, Kanagawa, on the 27th instant. The owner is as yet unknown.

Saturday, 2nd.

From the *Nichi Nichi Shimbun.*

NOTIFICATION.

To the Kochô of the 6th, 7th, 10th and 15th divisions of the first ward.

Persons who were burned out by last night's fire in the above divisions and have no place to go to, will for the space of one week be provided with accomodation at No. 16 Nagata-chô, Nichome. You are therefore ordered to examine into, and give the names of those who require such assistance.

KUSUMOTO MASATAKA,
Vice-Governor of Tôkiô *Fu.*

November 30th, 1876.

From the same.

Messrs. Okura & Co. have given, through the Tôkiô *Fu*, one thousand *yen*, and the office of this paper 200 *yen*, to the sufferers by the late fire.

From the same.

As soon as possible after the outbreak of the late fire the Bureau of Police proceeded to provide food, etc., for those who had been rendered destitute, and early on the morning of the 30th ultimo all who required it had been supplied with the necessaries of life, and the same relief was continued to be given throughout the day.

From the *Akébono Shimbun.*

His Majesty the Mikado has bestowed on Shinran Shônin, the founder of the Shinshu sect of Buddhists, and who has been dead about 600 years, the title of Kenshin Daishi.

From the same.

At 2 p.m. on the 30th instant a fire broke out at Utsunomiya which destroyed 36 houses.

From the *Chôya Shimbun.*

Another newspaper, called the *Kakôbi Shimbun*, has made its appearance at Kobe.

From the *Mainichi Shimbun.*

The Gas Company of Yokohama use daily seven and half tons of coal.

IMPERIAL GOVERNMENT RAILWAYS.

SIR CHARLES DILKE ON JAPAN.

IT cannot be doubted that considerable advantages accrue to us all in many ways from the visits of those who are rather humorously than disrespectfully called 'globe-trotters' Socially considered, the globe-trotters are as acceptable to our rather dull life, as the visits of the shining ones with wings were to the inhabitants of the land of Beulah. We shall not pretend that they may be angels entertained unawares. But they are mostly agreeable intelligent people, who bring us fresh experiences and awaken pleasant associations with the old world, who impart to us something of the enthusiasm with which they regard things too familiar to us to be any longer exciting, who never remind us of our faults or shortcomings—at all events until they reach home again—and who flatter our vanity by the interest with which they listen to, and the grace with which they accept, such information as it gives us so little pains to impart, and affords them so much satisfaction to acquire. Debarred by irreversible law from being prophets in our own country—for thus each of us must temporarily regard his adopted home—we are flattered to find ourselves oracles to them, and to have our utterances accepted with equal faith and gratitude. It is not perhaps until they know more of us, or we of them, that all illusions disappear, and it is mutually discovered that the world will let us all die without very serious regret or remonstrance.

It need not cause any very great astonishment if some of the globe-trotters who spend a month or six weeks in Japan, go away with some confused ideas regarding facts, and reproduce these on their return home. The sense of responsibility under which many men write a magazine article is not very grave—perhaps not grave enough—and there is some credit attached to the energy which bids a man start off after the dissolution of Parliament, make the tour of the world before the opening of the next session, and in the course of a few months publish three or four readable, if rather superficial, accounts of his travels. But the feat is not without attendant dangers, and Sir CHARLES DILKE has amply illustrated them. His article entitled 'English influence in Japan' in the last number of the *Fortnightly Review*, is fairly readable; but it teems with serious blunders, and many of the impressions it leaves on the mind are wholly erroneous. When a diplomatist is gravely in doubt in regard to some important issue, either present or future, he gravely prefaces his representation with the words "Now, it is obvious &c.;" and, under similar embarrassment, divines constantly call an audacious or utterly unphilosophical assumption "a blessed truth." Sir CHARLES may possibly have been conscious, while writing on Japan, that he was going over thin ice, but, if so, he may fairly be congratulated upon the skilful manner in which he has concealed his sense of fear—or, let us say, of danger. The public in England will probably accept his version of Japanese affairs, while many who know a little more about them are not disposed to treat his errors as more serious than might be expected under the circumstances. But they demand correction, and he must forgive us if we administer it.

It is a venial error to call OKUBO the Prime Minister, and not more grave than to say that Mr. CROSS is the First Lord of the Treasury. But exactly to this extent it is an error. OKUBO is the Minister of the Home Department. Again, Sir CHARLES DILKE's estimate of IWAKURA's position and abilities is very inaccurate. True, he is a *kugé*, and was thus of the old Kiyôto party. But he is certainly one of the most able men in the Government, and no member of it has a larger or more definite idea than he of the position, the needs and dangers, whether internal or external, of the Empire. It may be doubted whether the influence of his mind on the national affairs is not more direct and sensibly felt than that of any other living Japanese statesman.

As regards SHIMADZU SABURO, Sir CHARLES says, "He is the foremost man among the Scotchmen of Japan. It happens that he is a Scotch Tory, while most of his clan are Radicals." Now Scotland has clans, and Satsuma forms a clan, but really there is no greater common measure between them than the Ms, the rivers and the salmons in Macedon and Monmouth. The Satsuma men are essentially Tories, taking them as a clan. The origin of Sir CHARLES' error, which pursues him throughout his essay and makes him write of Japan as the land of revolutions, is in mistaking the restoration of the Mikado to his rightful place in the Empire, for a revolution. True, it is generally spoken of as such, and the term is hardly misapplied to a movement which upset a system of government of six hundred years' standing. But it was essentially a restoration. The Shôguns were usurpers. They governed, indeed, under the sanction of the Mikados, but they were always strong enough to extort that sanction for any course they thought fit to pursue. The Satsuma clan, in virtue of its very Toryism, furnished the natural leaders of a movement which abolished this usurpation, and the strength of the sentiment is so strong that the clan even now shrinks from the legitimate consequences of that movement. The feudal system was the child of the Shôgunate, as we have recently shewn, and the Restoration logically and inevitably involved its death. But the Satsuma men are so little the Radicals Sir CHARLES DILKE calls them, that they refuse to see their province lose its individuality and amalgamated with the other provinces of the Empire. A Satsuma man is first a Satsuma man, next a Japanese. But even a Chôshiu man is first a Japanese and after that a Chôshiu man. The Satsuma men to this day administer their own revenues and have their own contingent of troops—far too large a one indeed. The writ of the Central Government is powerless in the province unless backed by the provincial governor, and thus the Satsuma men though loyal at heart make pretty much their own terms and say yea or nay as suits them. To reproach the central Government with this, as was done here a short time back, shows an absolute misconception of one of the most difficult questions with which it has to deal. Practical statesmen, as Lord BEACONSFIELD said the other day at Aylesbury, cannot always do what is just and right. They must do the best they can under all the circumstances, and this is the position of the Japanese Government with the Satsuma clan, or the Kagoshima *ken* as it should more properly be called, for, in theory at least, we have nothing more to do with clans. If the men of the *ken* refuse to abide by the pension measure, as it is probable they will, no power in Japan can compel them to accept it, and whether just or unjust towards the other *ken*, the Government will be forced to give way.

Shimadzu Saburo did not write the attack on Christianity called *Bemmo*, as Sir CHARLES DILKE says; he merely furnished a short commendatory preface to it.

Although Sir CHARLES is certainly in error in regard to the proposed sale of the great *Dai-Butz* by the Government, and the subscription said to have been raised among the foreign residents of Yokohama to restore the guardian figures at the gates of the temple at Kamakura, he is quite correct in his reference to the utter want of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

all consideration for Buddhism and the Buddhist relics shown by the Government since the Restoration. The object of this, of course, has been the revival of Shintô, which is the supposed natural religious support of the Mikadoate, inasmuch as it insists upon the worship of the divine ancestors of the Emperor. The Japanese may rely that Shintô will do nothing at all for them at this crisis. The fictions on which it is based are fast melting away, and it has no power over the heart, no ethical system, it supplies no incentive to a higher life here, or, so far as we know, extends any hope of a life hereafter. The true religious support of the monarchical system of this country will be found in the Sacred Scriptures of the Jews and the Christians, which possess an altogether unequalled, we will say, unparalleled, influence over the heart and life, an ethical system alike invaluable to the ruler, the economist and the social reformer, abundant incentives to a higher life here, and the only well grounded hopes man has—for neither philosophy nor science has any—of a life to come. To an age which has not yet constructed a theory regarding the Holy Scriptures to replace that which the increase of knowledge has destroyed, these words may seem strange enough, and they will be derided alike by those who do and those who do not believe. But so surely as there is *an enduring Power, not ourselves, which makes for righteousness,* to use Matthew Arnold's words, so surely will those Scriptures be, to the end of time, man's most trustworthy guide to the mode of His existence and operations. We would not have Japan suppose she can advance safely without it.

In regard to the disposal of the former incomes of the nobles, gentry and *samurai,* Sir CHARLES is again altogether at sea. He seems to imagine that the ex-*Daimios* alone are affected by it, and will perhaps be astonished to learn that it directly touches something like two millions of the entire population. If we could imagine the descendants of the soldiers and officers who fought at Poictiers, Agincourt and Cressy, at Ramilies, Malplaquet, Blenheim and Plassey, all quartered upon the agricultural population of England, and told one fine morning that, at a date varying from six to fourteen years, their incomes from this source would cease, and that the Government would then and there give them interest-bearing bonds for the principal, assessed at a given number of years' purchase, we should have something of a rough analogy for the late measure. We doubt if any fairly governed country in the world has ever had its substance so completely eaten up by the privileged classes as Japan. To this cause the absence of accumulated wealth in this country is distinctly and directly traceable, and those who inveigh against the injustice of the recent measure should try to estimate the enormous injustice inflicted for many generations upon the agricultural class of this Empire by the system which has now received its death-blow.

Sir CHARLES DILKE states the revenue and expenditure of the country at £9,000,000 and odd. The last estimates issued for the year ending 30th June 1876 were; Income, *yen* 68,588.266, or, estimating the value of the *yen* at four shillings, about £13,700,000. The estimated expenditure was about £18,000 less.

Sir CHARLES says "the country is democratically organised, although under despotic forms." This might quite justly be said of China, but is exactly the reverse of true as regards Japan. We doubt whether a more essentially aristocratic form of government can be found on the face of the earth, although, as might be expected after the convulsion of 1868, many new men have come to the surface. Sir CHARLES is equally in error in saying that the growth of the silk trade in Italy is doing serious damage to Japan. Putting aside the special circumstances of this year, there is no such growth of the silk trade of Italy as at all affects Japan, and, here again, if the exact reverse of the statement had been made, it would be far nearer the truth.

Again, Sir CHARLES DILKE represents OKUMA, the Minister of Finance, as an able man, but powerless in the presence of the people's cry for the reduction of the ex-*Daimios*' incomes. There can be no manner of doubt that the Finance Minister is a very able man indeed; but to imagine that he was in any way forced to devise and carry out the recent measure for the reduction of the burdens of the country—for this is what it comes to—by any popular cry, is a very grave error indeed. OKUMA was clear-sighted enough to see that this country never could thrive under the enormous pressure of these allowances to the privileged classes, and, as Finance Minister, he had to make both ends meet under very great difficulties indeed. Knowing that the feelings of thirty-one millions out of the thirty-three would be with the Government in the measure, and knowing that the present, as opposed to the old, constitution of the army would enable the Government to put down all resistance which the measure might arouse, he may be supposed to have instigated it as a financial expedient imposed on him by the condition of the Empire. We are unaware of any single measure into which the Government has been forced by the pressure of public opinion, which it has unfailingly headed since the day of the Restoration.

When Sir CHARLES goes on to say that Japan stands before some of the European powers in this special point that her "finance accounts may be taken without suspicion," he pays the FINANCE MINISTER, and even the Japanese character, a tribute which, with all our love of the country, we should not have ventured upon. What we have always believed and contended in these columns, and what we still contend and believe, is that the accounts furnished by the Treasury are substantially correct. This has not been with us any matter of faith, or we never should have expressed ourselves on the subject as we have done. It was a conclusion formed after much close enquiry and examination and cross-examination of statements, and we have never wavered in it. When told, as we have been a thousand times, that these accounts are perfectly worthless, and that the country is in a state of hopeless bankruptcy, we have always felt perfectly justified in inferring the hopeless stupidity of the man who made the remark and contenting ourselves with the inference. But we cannot forget that Finance is not yet in this country the science which it is in France, Germany or England, and that even the mechanical appliances, as it were—the methods of book-keeping, &c.—though enormously improved under the administration of the present FINANCE MINISTER, must still be imperfect. Within a moderate, and perhaps calculable, error, we have no doubt that the accounts issued by the Treasury are correct; but we should hardly have gone as far as Sir CHARLES DILKE for the reason just stated. Nevertheless, it should certainly be gratifying to the Japanese to find that an able man, visiting this country for a couple of months, seeing and talking to every one, and writing an essay which may be supposed to contain the balance struck by himself between the various opinions he has heard expressed, should pay their Treasury so high a compliment. Nor shall we be greatly reproached for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

praising Sir CHARLES DILKE's intelligence where, in the main, as in this case, he agrees with us.

In his views regarding the admission of Japan into a Postal Convention we think him clearly right, and have long held and expressed this opinion We have no doubt that this will soon be done. But when Sir CHARLES expresses his belief that extra-territoriality might with safety be given up, we must frankly tell him that the startling nature of his opinion is not atoned for by its soundness. He possesses the great merit of the 'courage of his opinions'; but they would perhaps be more valuable did they demand less of this quality. It is the desire of every man competent to form an opinion on the subject, during the first six months of his residence in Japan, to see the extra-territoriality jurisdiction clauses struck out of the treaties; but by the time he has been here a year, the desire has disappeared and been replaced by a conviction that any such step is at present impossible. The question is too large a one to argue here, but we have no hesitation in saying, and wish to say it as forcibly as possible, that the administration of the Press-laws alone during the past eighteen months, would amply justify the most confident and hopeful of the Western powers in refusing native jurisdiction over its subjects or citizens. So long as such an arbitrary exercise of power is possible in this Empire, we shall continue to be the uncompromising opponents of native jurisdiction over foreigners in every form or way.

On the shooting question Sir CHARLES would be more right than he is if it were possible to conceive an English judge administering Japanese laws in his court, for this is what the Japanese demands logically involve, and this is, of course, impossible.

The following paragraph from Sir CHARLES DILKE's essay is ingenious, and as such we insert it *in extenso*. It should be remarked, however, that the army is required here, for the present at least, for quite other purposes than foreign conquest.

> There is one future suggested by the military statistics I have just given, which would be even brighter than that of having Japan for our firm friend in the Pacific. Shall I be accused of dreaming dreams if I ask whether it would not be a happy thing that the Pacific should be neutralised? The states at present bordering upon that ocean, or wholly situated within its limits, have not yet followed those of Europe into reckless military expenditure. Japan is entering upon that course; and can we blame her when we remember the perpetual presence of a Russian squadron upon her coasts? Australia has no army, America desires no triumph of the sword, and Russia alone of all the Pacific powers is suspected of ambitious designs. Would it not be possible to induce the European Powers to agree to support the *status quo* in the Pacific, and to recommend the island Powers of that ocean to put down their armies, and apply their revenues to public works and purposes of trade, of art, and of civilisation?

The next paragraph, too, bearing on observations already made by us on Sir CHARLES DILKE's views, deserves attention.

> I have answered, as well as I can, the questions with which I set out, but it is impossible to satisfy even one's self as to the accuracy of statements which concern so strange a country as Japan. What can be, or ever has been, in the history of the world, more singular than the combination of the extreme democracy of the spirit of its government with the blind tradition that is personified in the Mikado? I said above that the Mikado had taken but little part in public affairs. The marvellous fact is that, in so revolutionary a country, he should be there at all. His ancestors have reigned for 2,536 years at least, and his style, with magnificent simplicity, runs "Mutsuhito, by the grace of Heaven, Emperor of Japan, seated on a throne occupied by one dynasty from time immemorial."

This sentence shows the danger of working with an unverified theory. His author has got into his head the idea that the institutions of the country are democratic, and that it is a revolutionary country, and the consequence is that he is utterly staggered by the blind tradition personified by the Mikado and the "marvellous fact" that he is here at all. The explanation is simple. The spirit of Government is essentially aristocratic, and the country is not in the least revolutionary. On our theory all the facts fall into their places; on Sir CHARLES's they are not reducible to any sort of order.—With his views upon such Japanese art as he speaks of, we entirely agree. The gigs and hats and suburban villas are all horrible together.

Sir CHARLES is utterly wrong in supposing, as he does, that "the leading men of the Tycoon's Government have been very generally employed by the Government which succeeded to the imperial power." Of a few of the second class men, indeed, this may be truly said, but not of a single leading man, except, perhaps, KATSAWA. It is impossible to speak of ENOMOTO as a leading man in any serious sense.

The story of the French officers finding themselves holding commands in a rebel army in consequence of the rapid changes "in a revolutionary country," is an entire misconception of the facts of the case. The French Military Mission, engaged to instruct the Shôgun's army, finding their position a very equivocal one on the outbreak of the movement which led to the Restoration, returned to France, with one exception, who joined ENOMOTO in the hopeless and visionary project of forming a republic in Yezo and gradually inducing the northern Daimios to join him. He was disloyal to the Mission and disloyal to his country which was in friendly alliance with Japan, he placed his newly arrived Minister in the embarrassing position of being the suspected abettor of a movement against the restored Emperor, and he ended by proving disloyal to ENOMOTO himself, whom he deserted in the hour of danger.

It is really hard to go through paragraph after paragraph with the only view of pointing out errors of this kind, but what are we to do? Sir CHARLES speaks of twenty thousand men having been landed at Formosa in the expedition of 1874. We doubt if five thousand Japanese were ever on the island at one time.

We pass over two or three mistakes made here and there before we come to the end of the essay, the last two paragraphs of which so well represent our own feelings on the subject of this delightful country, and are are so graceful in themselves, that we cannot be content to withhold them from our readers.

> Whatever may be our doubts as to the extent of the foreign influence, we can have none as to the loveliness of Japan, and the delight of travelling in the interior. When I left the country I had seen seven out of the eight largest towns; but it is not the weeks in the cities that live in my recollection, but the few days spent in the country districts. Japan is the traveller's paradise. Through a strange medley of pines and palms, of rice and buckwheat, of bamboos and elms, of tea and cotton; through azalea thickets and camelia groves, across tobacco fields and past rocks covered with evergreen ferns of a hundred kinds, and crowned with grotesque remains; through tussac grass and forests of scarlet maple, and over mountains clad in rich greenery, you may journey in perfect peace, safe from robbery, safe from violence, safe even from beggars, never troubled, never asked for anything, except by a civil policeman for your passport, and that with the lowest of low bows. The maidens say "Ohio" sweetly to you in the villages as you pass, where eight years ago you might have been sliced up by the sharp swords of the Samurai. "Ohio" too, call the labourers in the fields, leaving their work to come and bow at the roadside; not as the Japanese bow to the Dutch, but with the bow of equal to equal, the bow of infinite politeness. Without servant or interpreter, a European can travel in safety throughout the land.
>
> The people and their houses have been described too often. One cannot but love their fun, their cleanliness, their inborn sense of art. It is impossible to realise that the Japanese are real men and women. What with the smallness of the people, their incessant laughing chatter, and their funny gestures, one feels one's self in elf-land. On a fine day, the men appear as grinning demons in black tights, streaked all over with blue heraldry. On wet days, the long rush coats and long-sided straw hats equally remove all vestige of humanity. When we turn over Japanese pictures in our English homes we fancy that both the faces and the dress must be unlike real life. On the contrary, they are very like the old fashions of the wealthy class, with whom faces are as much made up, and are as much a matter of fashion as are clothes. It is the country people of Japan who

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

are my elves—the tiny, jovial, copper-coloured poor. Were I describing rural Japan at length, I would try to show that it may be looked at from a point of view from which it has not as yet been much considered. Japan is the last refuge of the Joyous Life. See the Thames on a fine Saturday in July, or the fair of St. Cloud on the last Sunday evening of its reign, and you may for a moment believe that even in Europe the Joyous Life is not extinct; but the fun of the Thames is vulgar, and the loose morals of St. Cloud are venal. The Joyous Life of the Middle Ages may have been bad or good—in Europe it is gone, and let us speak well of the dead—but it was neither venal nor vulgar; that life lives still in Japan, where no paganism of antique grandeur dwells, but rollicking, unthinking fun. All who love children must love the Japanese, the most gracious, the most courteous, and the most smiling of all peoples, whose rural districts form, with Through-the-Looking-Glass-Country and Wonderland, the three kingdoms of merry dreams.

We have occupied our readers' time most unconscionably over not very important matters. But Sir CHARLES DILKE has taken on himself to make a great number of statements, many, if not most, of which are mistakes. He has formed some sound impressions, no doubt, and he has here and strayed into correctness as regards facts. But he has trusted too much to his memory, and has treated a question superficially which, if he determined to treat it at all, he should have handled with the ample materials at his disposal either here or in London. Had he even ten times the ability with which we are disposed to credit him, facts are indispensable to sound generalisations, and he has shewn himself disposed to generalise very positively on statements or impressions the truth of which he has taken no pains to verify. No reputation or struggle for one can long outlive this with a practical people like the English.

SPIRIT OF THE JAPANESE PRESS.

PERSONAL AND POLITICAL RIGHTS.

(Hôchi Shimbun, 27th November.)

Certain writers contend that political privileges cannot be obtained without being preceded by personal rights. In other words after the people have grasped their personal rights with a sure hold, then is the time for securing political rights; and thus these writers plead that before all things the acquisition of personal rights should be our great endeavour. We, as much as they, desire the people to acquire their personal rights, but when we come to consider whether this can be achieved by following the course indicated above, we conclude that an inverted order is recommended. Thus the views of these writers are in our opinion erroneous.

We propose arguing the case from another point of view, and showing how personal rights may be obtained.

Political rights constitute the citadel which protects personal rights, and personal rights are antagonistic to arbitrary power, which perpetually strives to suppress them. Political rights are equally opposed to despotic power, and protect personal rights, which have no sure foundation unless secured by something external to themselves.

Although liberal rulers may grant to the people the rights to which they are entitled, yet the accession of a tyrant to the throne might lead to the revocation of all the rights granted by his predecessor. Personal rights are therefore very difficult to maintain, and political rights are their sole efficient protection.

Some writers seem to confound these rights, and their views tend to obstruct the acquisition of them. Let us see for instance how personal rights were protected in England. In the year 1215 the nobles assembled and forced King John to sign the Magna Charta. But it was not until they had suffered great hardships that the people acquired the rights granted to them by this charter. When the House of Commons had taken firm root in the country, the people acquired the key to their political rights, and the Lower House was fully established under the Plantagenets. Yet, at first, the power of the House did not extend to the Government and therefore influenced the administration but very slightly. Moreover it showed at first no disposition to oppose the doings of the Government. Yet, for all this, when any question arose affecting the personal privileges of the people, it struggled with the greatest ardour, and it was owing to these struggles that the House obtained its influence over the administration of the national affairs.

Under the Tudors the House of Commons seemed to have lost of its influence. But closer examination shows that it had gained power over the Government. When Henry the Eighth decreed certain changes in the national religion and in matters affecting the succession, he saw that to be efficacious they must be declared by the Parliament; and hence we may conclude that the Lower House was in possession of great power. Under the Plantaganets, the struggles of the House were for personal rights; under the Tudors, they were more directed towards influencing the general administration. From that time onward the Lower House constantly increased in power, until it acquired complete control over financial affairs, the limitation of the power of the Sovereign, etc.

The above sufficiently proves, we think, that the personal rights of the English people were protected by their political rights, and the two advanced *pari passu*, each supporting the other.

However tenaciously the English might have held on to their personal rights, and however firmly those rights might have been rooted, they would surely have been deprived of them by arbitrary sovereigns or ministers but for the House of Commons. Under the Tudors the House appeared subservient to the will of the King, and the rights of the people were thus endangered. Yet enough of political rights existed in the possession of the House to protect the personal rights with extreme care, and it stood out boldly against the Crown until it acquired the power which we see it possessing at this moment.

This clearly proves that those who urge that personal rights should be first acquired, and then political rights, are wrong in their views of a true method.

Unless the people possess both personal and political rights they are imperfectly furnished, and the attempt to gain the former without having first acquired the latter, is like trying to subdue a powerful enemy without men or arms. No! political rights are necessary for the acquisition, the defence, and the preservation of personal rights. When political rights are possessed by the Government alone, personal rights, are like a ship without a rudder, blown about from shore to shore and finally striking on a fatal rock.

Although it can be contended that Japan has a legislative body, it cannot be said that the people possess any political rights. They have not won and still less established them. So long as they are under their present liberal rulers, all may be well enough. But when these days are past, and if the people have meanwhile gained no political rights, they may lose the opportunity of ever acquiring these personal rights. Political rights are therefore what we must chiefly strive for.

[*Qy.* Power.—ED. *J. W. M.*]

THE ELDER SAIGO.

("Hôchi Shimbun," 20th November.)

Just read the article on Saigo from the pen of the able writer in the *Nichi Nichi Shimbun!* If what he states is actual fact, there is indeed good room for despair. We would rather give up our position and live in complete retirement than live among such a torpid senseless people as the *Nichi Nichi Shimbun* represents the Japanese to be.

(Here follows an extract from the article entitled 'The Elder Saigo' published in our columns last week.)

We are not aware what has been the effect of this article on the public generally, but on us it has been lamentable indeed. Yet the writer of it seems to have derived the profoundest satisfaction from his work!

What does his article really amount to? He says that the Satsuma men are always eager to take up arms against the Government, and are only restrained from doing so by the influence of Saigo, the exertion of which in this manner averts heavy calamities from us. But this assuredly involves the conclusion that the Satsuma clan controls the whole nation and Saigo controls the Satsuma clan! To believe this is to believe that influential men are rare in Satsuma—a province boasting a million of inhabitants—for it implies that Saigo could make them act as he pleased, and that he is the only man of influence among them. If this were the case, he might fitly be compared with one of the gods. And whether it is further asserted that others failed to carry out their plans because he refused to join them, it implies that his influence is paramount throughout the nation.

We do not pretend to estimate exactly the power Saigo possesses over his clansmen. But we are convinced that the Government treats him as one who has done deeds worthy of honour.

We have always thought of Saigo as a man who has done many notable and honourable deeds, who is perfectly loyal, and who

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

retired to his province with the desire to live in independent privacy. In this he is highly worthy of imitation. But as to his plans or intention, they are matters on which no information is attainable. Thus it would be wrong for us to depend solely on him, to put our trust solely in him, and to think that he must always necessarily act in the interests of the nation.

Moreover, it is not our wish to see the settlement of all our national affairs depending upon the temper of one man. It should be arrived at through the will of the people. No! Saigo is not a god. He is a man like the rest of us, and must not be extolled on fictitious grounds. Any one who does this must be content to be laughed at as a fool, for it is impossible that this can be true, and when we examine the article in the *Ni hi Ni hi* we cannot restrain our laughter.

Let us all bear in mind that Japan is not the Japan of Saigo, but of the people who inhabit it. Public opinion is not formed by Saigo. Saigo does not pay all our taxes, nor are Saigo's rights those of the nation. We have a government over us which administers the public affairs, and is it not then absurd that everything depends upon the will of Saigo and the Satsuma clan?

If we are to believe the *Ni hi Ni hi*, the Saga, Corean, Hagi and Kumamoto affairs were all settled by the Satsuma men, and Saigo has the supreme control of them. Yet this is what this journal asserts, as if it were a source of pride to the people!

We appeal to the judgment of the public, and shall be truly sorry if a verdict is given for the *Ni hi Ni hi*, as we have no desire to be called the people of Mr. Saigo.

THE INSURRECTIONS SINCE THE RESTORATION.

(*"Hochi Shimbun"* 15th November, 1876.)

The recent insurrection is the fourth which has been caused by the *samurai* since the Restoration.

The first was an outbreak of the Chōshiu men, who, after causing disturbances in their own province, proceeded to the province of Chikugo, and there incited their fellows to do likewise, causing much confusion in the south.

The second was a conspiracy headed by Maruyama and Kumai in Tokiō in 1871, but it was discovered and suppressed before violent measures had been resorted to.

The third was the Saga affair of 1874.

The fourth was the late affair at Kumamoto and Hagi.

All these have been caused by the *samurai* but the grounds of each have differed widely.

The cry under which the first was raised was *Joi* (expulsion of foreigners); the second, loyalty to the Mikado; the third, a Corean expedition; the fourth, the expulsion of the wicked advisers who surround the Throne. Not one of these had any real concern with the welfare of the people.

The first disturbance gave immense trouble to the Government, which at that time was not yet securely fixed in its seat.

The plot of the second was fortunately discovered in time.

The third was recklessly conducted and soon suppressed.

The fourth, that is, the Kumamoto affair, though in itself not serious, yet broke out in so unexpected a manner that a large amount of mischief was done by it. That the Hagi affair, though the plan of it had been laid long previously, was suppressed within a few days.

Now if we examine into the characters of the leaders of these various outbreaks, we shall be better able to judge of the nature of the movements they headed. We therefore proceed shortly to do so.

Dairoku, the leader of the first, was a scholar of high attainments, but was wholly ignorant of civil administration, and the *Joi* spirit was so strong among his partisans that he was forced to take up arms against his own convictions.

Maruyama and Kumai conspired against the present Emperor and desired to dethrone him and to place in his stead a member of the southern branch of the Imperial family. The idea that they could succeed in this arose from an utter lack of sagacity, and had they succeeded in their attempt, they could never have successfully held the reins of government.

The third was Yeto Shimpei. We believe he was an accomplished scholar, sagacious in his decisions, and admirable in many respects. He was regarded as one of the aristocratic party, and was practically versed in the affairs of life. It is certain therefore that he knew whether or not his insurrection or the Corean Expedition would be of benefit to the country. How a man of so much understanding could have acted as he did, is wholly unintelligible to us. He made the Corean Expedition a cry by which to draw men together, and then sought by means of them to revenge his own discontent with the Government, for we may judge by his conduct while in office that he would not endanger his own life in a Corean Expedition. We cannot divine what his real intentions were, and have long giving up trying to do so.

The Kumamoto affair had its origin in an extreme bigotry, and the obstinacy with which the old party clung to obsolete customs.

The Hagi affair.—Mayebara, its leader, was once in office, but was wholly incapable of discharging its duties. He was angry at being dismissed, and, unconscious of his own want of official ability, was jealous of the advancement of others. His discontent was the origin of the outbreak which he led against the Government, and the sole result of it has been a grievous loss of life and property.

During the past nine years, therefore, we can count five insurrections which have broken out among the *samurai*, and each of them has caused some diminution of the happiness of the people and injury to the public welfare. Moreover, the Government has had to bear care and anxiety on this account, and loss to the Government is loss to the people, and this is therefore double loss. All these various outbreaks have had a certain amount of loyal spirit mingled with them, and why then have they always failed, and the leaders of them been punished? Because though these leaders recognized that there was an Emperor, they never recognized that there was a people. And hence they have not only failed, but they proved themselves disloyal. Be it good or evil, what affects the people affects the Emperor and his Government. In every one of these instances the *samurai* have gone to work without knowing that there is the people to serve.

Does the Government desire that these things should cease? If so, it should take such steps as would show these men that there is *a people*.*

IN THE GALLERY.

As is not uncommon with collectors of curiosities, old saws, stories, manuscripts and such like, I am the possessor of a gallery of pictures, a very extensive and remarkable gallery, too, I may add, and one which has been acquired with singularly little trouble or exertion upon my part,—so little trouble or exertion, indeed, has the collection of them occasioned me, that if I have to speak of it as none at all, I should not be stretching a fibre of my conscience, nor making the smallest draft upon the credulity of anybody. In fact, each and every picture in my possession has found its way into my hands by chance, and generally when I have been engaged in other business and least expected it, thrusting itself upon my notice, as it were, when I was thinking of something else, but none the less welcomed on that account, and always most eagerly secured. I am especially attracted by portraits, and am never so happy as when securing a valuable one and adding it to my store; except perhaps when arranging and rearranging my treasures, hanging this picture, it may be, a trifle higher, or depressing that, letting in a little more light upon a corner here or deepening a shadow there. But, after all, I am not certain that I do not enjoy even more than this, the labelling of them. As a rule they reach me unprovided with such impertinences as histories or descriptions, and I find myself at liberty to let my fancy play around them, and call them what I please. I am sometimes in as many minds of an afternoon over a picture, as a woman is in moods before her lover. By this means a portrait which has done duty in the morning for a sly and evil looking beggar, may turn out by nightfall to be an honest and straightforward teller of fortunes by the Chinese method. My collection, I do not hesitate to affirm, is indeed a noble one, and is moreover open to all comers. Everyone is quite at liberty to look his fill. I make no exceptions, for I am none of your exclusives who keep my masterpieces under lock and key. I hate your churl who graciously permits a favored few to view his treasures, doling out his benefits with a niggard hand on stated days which suit his own convenience—but no one else's. My pictures, on the contrary, are on view at all times and seasons, without regard to weather from dawn to sunset, aye, and as much before and after as each man feels inclined for. Every passer by is at liberty to stare in fact as long and as hard as he likes. There's nothing to pay, and I don't even expect thanks—no I am far

* Obviously a recommendation of representative institutions.—[ED. *J.W.M.*]

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

too magnanimous for that—for the high road is my gallery and the dusty wayfarers thereon my priceless pictures.

The advantages of this arrangement are many and obvious. I pay no rent for housing my gems, nor am I in any fear of thieves or fire or other calamity by which they might be injured or destroyed. When I desire to increase my store, my area of selection is practically limitless. I can take my time over a picture which has caught my fancy, undisturbed by any fears that a rival collector may step in and carry off the prize whilst I am deliberating over it. Nor am I influenced in such transactions by vulgar considerations as to price and so forth, for I need simply appropriate whatever I have taken a liking to without so much as 'by your leave.' Questions, too, as to genuineness do not trouble me, for all my pictures are indisputably originals. I have in this way become possessed of so excellent and varied an assortment of pictures from time to time, that I defy the greatest hoarder of canvas in Europe, Asia, America and the two Sicilies to produce the like or anything at all approaching thereunto. Canvas did I say? A fig for your canvases and your Bristol boards and 'double mills.' Away with them! I snap my fingers in the face of every daub which they are guardians of. They get mildewed and discolored by age, whilst my pictures, on the contrary, preserve their looks, and are always so very lifelike that they are as "natural as nature" whatever their age may be. Why, I've known a sketch of mine so much improved by time, that from being a representation of a little girl, it has seemed to grow into a modest and pretty young woman, and an old man, as he grew older, to have real wrinkles and snowy hair. Shew me the "old master" in any other collection that the same can be said of, and I'll make a present of my gallery and all it contains to the very next passer by.

Another great advantage which I enjoy and which I have already alluded to, is that I am in no wise required to take over with my pictures a cut and dried description or designation of each. The interest of a painting is finished and over, I maintain, when you are told that it is so and so, for, if it is so and so, it cannot be anything else. To be informed that 1190, it may be, is a "head of Judas by Van Tromp" is to exhaust the subject then and there. Your imagination can take no liberties with it. Judas remains Judas, and there's an end of the matter. The well known meeting of Jacob and Rachel—Jacob by the way in knee breeches and a court sword, and Rachel in a farthingale with a fan in her hand—if anonymous, would do duty for a thousand other scenes, but labelled "Jacob and Rachel" it becomes after the second or third look tiresome, and upon the fourth and fifth intolerable and a nuisance. In my case, I am not bound by any considerations of this description, and I am therefore at liberty to plot such a history for each as pleases me. It is true that these histories are rarely accurate. But what of that? I just erase or add as the case may be, and it is astonishing how well the subjects sometimes seem to bear new titles. I could tell, for instance, of a jovial looking red-faced fellow whom I used to encounter in the early mornings, rolling home, and whose approach was usually wafted before him on the wings of the breeze ere his burly form disclosed itself. He did duty for the "Jolly Tippler", until I found out that he was a priest of great sanctity and much repute at death-beds after the doctor had been dismised. He seemed me, though, to fall into his new character quite naturally, and it appeared to fit him without a wrinkle. Then there was the "Old Fencer," who, from the majesty of his mien and the magnanimity of his countenance, I had set down for many months as an indigent noble. That old fellow, too, who, judging from the wrinkles in his forehead and his pursed up mouth and the importance of his gait, I had almost determind to be a philosopher, when he turned out to be a doctor, and a quack to boot, I declare I had not to find fault with a single line in his physiognomy. There's little Koidzumi also. Ah! but she was never anything but the sweetest and daintiest of little maids. Alas, that I should have lost her! She slipped off her nail one morning in company with a picture of a gallant young *samurai* who hung in her vicinity, and I've never heard tale or tidings of her, or him either, for the matter of that, since. Their places are empty still, and I despair of worthily filling them again. But why should I repine? for I carry with me a pleasant memory

> Dear as remembered kisses after death,
> And sweet as those by hopeless fancy feigned
> On lips that are for others.

Such simple little pictures as Koidzumi's, I must say, require no ingenuity upon the part of the essayist to tell their tales. Their stories are written in their features, and are as regular and graceful as the oval of their pretty faces.

But it is quite otherwise with some sketches in sombre colours which I have in a dark corner of the gallery. Inartistic pictures at first sight, rude and unfinished, and difficult, I might add, to discern correctly in every light. There is one of these, in particular, on which I have tried so many characters, and with such ill success, that I despair of suiting him at all, and have therefore turned him face to wall, until I find a favourable opportunity of again regarding him. And yet, perhaps, I am not wholly to blame in this matter, for the limner has used in the portraying of his features some subtle chemicals whereby his portrait comes and goes upon the canvas—like a summer cloud across the polished surface of a mirror,—disappearing as quickly as it came, and leaving the beholder bewildered with the suddenness of the phenomenon and the manifold and varied expressions which the face has worn, that has just passed before him. In truth I am strangely interested in this "old man with the bundle," as I am fain to call him for want of a better appellation. I occasionally encounter him in the early mornings gliding round a corner or disappearing into an alley. He's come and gone in a twinkling. A moment before he has passed you and all but disappeared, you'd have sworn the street was empty. And yet, for all the rapidity of his movements, you are startled into instant attention by the indescribable expression on his weird and haggard countenance. Ah! how shall I depict it, that strange face? Truly a mystic face, shadowy and unstable in its lineaments as the morning mist which rises from the valley and wavers in the tree tops for a moment, ere the rising sun, to which it owes its being, dissolves it into nothingness. A face that thrusts itself upon one in dreams—where it is at home amongst the shadows—and intrudes itself at odd times and seasons when it is least expected, and which eludes you when you would recal it, as the picture painted on your retina by a glaring colour or bright light projects itself upon the wall before you whilst you mentally ignore it, but disappears when you would trace its outline. Evanescent as the memory of a fancied perfume which invades your nostrils and—but why multiply metaphors? The old man's face is indeed a puzzle of a physiognomy, one which leaves a general impression on the beholder of timidity and wretchedness, as the whine of the beggar's petition conveys distress, although not a word of it may have been audible, or the cadence of a funeral march which is borne upon the fitful air mellowed into naught but murmers, strikes a melancholy chord within the breast or——. But, hallo! Bless me, there he is. Here, 'stop thieves, Police!' Why, good gracious me! his filmy features fell upon my paper this instant as I wrote, and when I thought I had seized upon them, and desired to regard them closely, they vanished into vapour.

Correspondence.

THE LEGACY OF IYEYASU.

To the Editor of the "Japan Weekly Mail."

Yokohama, 28th November, 1876.

Dear Sir,—In the *Japan Herald* of yesterday I observe the following letter:—

To the Editor of the *Japan Herald*.

Dear Sir, The *Japan Mail* reviewer of Mr. Griffis' work, in reply to my note to you of the 20th inst., accuses me of having suppressed an important substantive, viz., *Yuyo*, in the name of the work I was translating, and substituted a translation of my own conjecture, viz., *Legacy*. He, moreover, asserts that the original name, as well as the usual designation of the *Hatsu Kuni* of Iyeyasu, is the Japanese word for 'testament or will.'

The word *Yuyo* does not appear in the original of my translation; consequently I could neither have suppressed it, nor substituted another word for it. Its absence in the manuscript also proves that it was not in the original title of the work, as alleged by him; and if further evidence is required on this point, I may refer him to Satow's dictionary, where it will be found that the word *Yuyo* is "not fully naturalized from the Chinese even now, though more that two centuries have elapsed since its adoption." I have not to meet the assertion that *Yuyo* is the "usual" and "well established native designation" of the document, and this I do by contradicting it. The manuscript is commonly known as the *Hatsu Kuni*, and though the word *Yuyo* would not be misunderstood in referring to it, it is not generally used. In case there might be no mistake, I took an opportunity of putting this question to a Japanese friend of mine: "Is the *Hatsu Kuni* of Iyeyasu generally called *Yuiyo*?" to which he replied, "Not the correct designation is *Ikun*, why do you ask?" *Ikun* means literally posthumous teachings.

I think I have thus disposed of my critic's two charges of suppression, substitution, and mistranslation, implying carelessness, or ignorance. His reference to the title of what are now known as the old and new testaments as an argument against my choice of the word legacy, to designate a very solemn document, is either irrelevant or demonstrates. As applied to the Scriptures the word testament is a figure of speech, used as a substitute for Covenant, to denote the books in which the old and new Covenants are written, though no one pretends to make and thereby that those books are in the form of a will; and the word legacy has been similarly used; thus the Bible is spoken of as a precious legacy to all ages. Whichever of the three words, testament, will, or legacy, is applied to the *Hatsu Kuni*, it must be as a figure of speech; for, etymologically speaking, neither is correct. The only point at issue is, which is the most appropriate? and I see nothing in the *Japan Mail* Reviewer's letter to lead me to adopt his opinion in preference to my own.

Yours truly,

J. F. L.

Yokohama, Nov. 27th, 1876.

I shall take up the points herein raised in the order of their importance; and first as to J. F. L.'s contradiction of my assertion that the native title of the manuscript is *Yui-jo*. This contradiction I meet in two ways:—

1st.—I send you herewith my copy of the manuscript, for the inspection of J. F. L. or of any one who cares to see it. It bears the title *Go Yuiyo go hiyaku kokkai* (*kaji*): which, omitting the honorifics, means the testament in one hundred sections kept in the treasure-magazine.

2nd.—I quote the testimony of Dr. W. Dickson, who likewise translated the work, to show what the title of his copy was:—"These rules are commonly called *Bokuy* "*huak kadjo*—the hundred lines or rules for the military "class. The title is 'Go yu i jowo' or 'Yu i geng on gong' "—the last testament of Tosho-goo, in one hundred sec-"tions."—Dickson's Japan, p. 241.

The second point I have to deal with is J. F. L.'s assertion that on reference to Satow's dictionary it will be found that the word *yui-jō* is not fully naturalized from the Chinese even now. Of the correctness of this bold assertion your readers shall judge for themselves. To begin with, the word *yui-jō* is not given in Messrs. Satow and Ishibashi's dictionary at all. Indeed it was scarcely to be expected that it would be; that useful little work being designedly and professedly a dictionary only of the spoken, as distinguished from the literary, language. But let that pass. If *yui-jō* is not to be found in it, a synonyme, the word *yui-sho*, is. To confound these two words is a serious blunder, for it might well be that an assertion true of the one would not hold good of the other. But even with regard to *yui-sho* it is at least doubtful if Mr. Satow has made the assertion which J. F. L. has mistakenly attributed to him with respect to *yui-jō*. I quote from the dictionary:—

"Will, n. (testament) *kakioki; yuisho** (c): verbal "——, *yuigon* (c)."

In the table of abbreviations &c., the asterisk is said to stand for *gagen;* and what *gagen* means is explained in the first sentence of the preface, thus:—"The words of "which the Japanese language *consists* [the italics are "mine] are divided by native grammarians into *gagen* "or 'elegant words' and *zokugo* or 'common words,' &c.," from which it plainly appears that the authors of the dictionary considered, and, I need hardly add, correctly considered, *yuisho* to be one of the elegant words of the Japanese language. J. F. L. has evidently been misled by the mark before the word Testament; but I think a re-perusal of the second paragraph of the preface, taken in conjunction with what I have above quoted will be sufficient to convince him that the lexicographers intend the remark "not fully naturalized" to apply to the word testament not in its ordinary sense as equivalent to a will, but in its special sense as the title of the Scriptures. In any case J. F. L. is doubly in error; firstly in imagining the word *yui-jō* to be identical with its synonyme the word *yui-sho*; and secondly, even if he has correctly given the sense of the lexicographers, in imagining that the remark has the evidential value he attaches to it; for the dictionary is avowedly and pointedly a dictionary of the spoken language only, and it is wresting it from its proper use to quote it as an authority in reference to so purely literary a question as the title of a manuscript.

The appositeness of my reference to the titles Old and New Testament was, I should have thought, sufficiently evident; but as J. F. L. seems to have missed the point of it, I will state the position again. The translators of the Scriptures have thought it just as much their duty to give us a correct translation of the original title as of the original text of the work before them. Why should not J. F. L., as a faithful translator, have done the same? The original title in the one case is a Greek word which means will or testament and has been translated so; in the other it is a Japanese word which means will or testament and should have been translated so; but it has either not been translated at all or translated wrongly. The fact that the Greek word meaning testament is also sometimes used to signify covenant is, it will be seen, totally irrelevant to the argument.

Two descriptive expressions figure on the titlepage of J. F. L.'s translation which, in the absence of any intimation in his preface to the contrary, might reasonably be presumed to have been intended as the equivalents of the original title or titles. One of these expressions is "Legacy," which, but for J. F. L.'s denial, I should suppose to be meant as a rendering of *yui-kun*, and which in that case would be a mistranslation; the other is "posthumous manuscript" which I take to have been represented in the original by the word *yui-jō*, and which in that case is a mistranslation also. By mistranslation I mean using an expression which only vaguely or partially conveys the sense of the original when it was easy to use an expression which conveys it accurately and fully. The word *yui-kun* means the final or dying instruction of a teacher, his last lessons, such as we have an example of in the discourse of Socrates in the Phaedo; applied to such instruction left in writing instead of delivered orally, it would be correctly enough translated by posthumous teaching, but where, as in the present case, the instruction consists of precepts as to the disposition and exercise of a political power which the instructor was transmitting as an inheritance to his descendants, a better translation still would be testamentary teaching. The word *yui-jō* means a testamentary document; in short, a last will and testament, not simply a posthumous manuscript. Which of these words *yui-kun* or *yui-jō* is the correct or usual title of the work in question is, it would now seem, a moot point; for I must confess that the statement of J. F. L. that the word *yui-jō* does not appear in the original of his translation causes me considerable surprise. That the body of political precepts it contains, if not the work itself, is often called *yui-kun*, I am well aware; but until better instructed, I shall continue on the evidence I have above adduced to believe that *yui-jō* is the designation given in the title of the work itself. J. F. L. has not yet informed us what was the title of his original manuscript, or indeed whether any of the three collated copies from

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

which he translated had any title at all. It would be an interesting contribution to our knowledge of the work, and might also have some bearing on the question of its authenticity, to know exactly what are the facts as regards its title. Might I suggest to J. F. L. the desirability of his imitating my example by sending in to your office, or if he so prefers, to that of the *Japan Herald*, for the inspection and instruction of scholars, such copy or copies of the work as he may be in possession of. By his translation he has well earned the gratitude of every student of Japanese history and politics, and it is to be hoped he will not decline to afford us more information on the not unimportant question of its title, than that vouchsafed to us in the answer of his nameless Japanese friend.

But the questions of the original title and of translation or mistranslation apart, there remains the issue whether legacy or testament is the more appropriate designation of the work. It must surely seem to your readers, as it does to me, an uncommonly strange thing that a person of J. F. L.'s intelligence, and the actual translator of the work to boot, should have a moment's hesitation in choosing. No exposition of mine as to the distinction between the denominative and the predicative use of words would be half to telling as a simple reference to the English dictionary. I quote the definition of the two terms from Webster:—

"TESTAMENT, n. I. A solemn, authentic instrument in "writing by which a person declares his will as to the "disposal of his estate and effects after his death. This is otherwise called a *will*."

"LEGACY, n. A bequest; a particular thing or certain "sum of money given by last will or testament."

And of these two words the latter is chosen by its translator to designate a document, the historic parallel of which he himself acknowledges to be the will of Peter the Great!

If I have trespassed somwhat largely on your valuable space, I have done so in the interests of the English language and of the principle of calling things in Japan, as elsewhere, by their proper names. It is to be desired that the "Legacy" of Iyeyasu may be soon relegated to the same limbo of misnomers, defunct or moribund, as the "spiritual Emperor" and the "happy despatch."

YOUR REVIEWER.

THE CHIUSHINGURA.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, November 30th, 1876.

SIR.—The writer of the review of my translation of *Chiushingura*, contained in your last issue, altogether misconceives the object of my book, indeed he does not appear to me to have read it with any attention. I lay no claims whatever to 'Japanese scholarship,' and I have simply attempted to convey to English readers some notion of the state of society in Japan under the old régime—curious enough, it seemed to me, to be worth portrayal—in the form of a free presentment of a popular story, gathered indeed from books, but not taken from any one source. Nothing was further from my thoughts than any sort of mere reproduction of a specimen of Japanese literature—a task in very few instances worth the necessary labour—and my sole aim was to put together the elements of a fair picture of a strange phase of civilization not likely to occur again in the history of the world. In this, despite your critic's sneers, I venture to think I have been successful. That I have made many errors, I am quite sure, more or fewer I suspect are unavoidable, seeing how scanty are the aids the student of the past civilization of Japan has at his command, and the conditions to which I was subjected deprived me of much even of such help as was in existence. But most of the errors held up to contempt by your Reviewer are not, taking into consideration the nature of the task I undertook, errors at all, even if they merited the strictures passed upon them from an interpreter's point of view. I deliberately combined, pruned and shaped my materials to suit the end I had before me; all I thought necessary to the story I retained, but excised and condensed considerably both narrative and dialogue—especially in the earlier and less interesting books—and my chief regret is that I did not carry this process further. Nevertheless, as I added little and kept to the spirit of my materials throughout; as, too, nineteen-twentieths of my book do actually consist of a free but correct version of the text I used, I was, I submit, justified in calling it a translation; and though I am far from being equal to anything like a full and accurate portrayal of any past phase of Japanese national life, I believe my book to form a real, if small, addition to our knowledge of old Japan. I do not see, therefore, how I have deserved the contemptuous sentence of banishment from the 'thorny field' of Japanese literature which your Reviewer has thought fit to pass upon me. My case is indeed a hard one—for, as I am not a 'proficient,' 'mean' or other, in any branch of learning, but simply an amateur in one or two branches, and likely, if only from want of leisure, to remain so, I seem to be under a kind of mental interdict, laid upon me as a punishment for my temerity in looking over the hedge of that sacred 'thorny (I should say thistly) field' where my critic intimates he himself finds an abundant pasture. I cannot go into anything like a detailed defence of my book, but I append a few notes which will show the true character of that part of the review with which they deal—even if my faults are judged from an interpreter's standpoint, and the remainder is, I can assure your readers, 'very much what might have been expected.'

And these notes must suffice, for I cannot waste time and thought in pursuing the controversy.

Yours, etc.,

THE TRANSLATOR OF *CHIUSHINGURA*.

Rendering *kutsuwa* by 'stirrup' instead of 'bit' is of course an error. The '*men*' of *gomen* commonly used means no doubt 'permission.' But I have come across instances where '*men*,' face, has been used. Surely such mistakes are plainly mere oversights hardly worth sneering over.

My version of the opening lines of the *Daijo* is wrong. It is a pity it is so, for to my mind there is more point in it than in the pedantically correct translation of your reviewer. I have traced the error to a mistake in my transcript.

My treatment of the word *Bannai* is simply a gross blunder, not for the reason assigned by your reviewer, but because its position and the context show it clearly to be a proper name.

These and many other errors have been long since recognised, some by myself, others by kindlier critics than your reviewer, and will be corrected in a new edition.

Joruri.—Here I maintain I am right. A *joruri* is a nearly continuous narrative, a drama, in literary form at least, is more commonly wholly dialogue from which the narrative is gathered. They are of very various character. They are often sung and recited by wandering minstrels just as ballads are in Europe. *Chiushingura* is nowhere truly metrical, even according to such queer metre as the Japanese possess—without rhyme or cæsura and with no feet, only syllabic limitations—except in the 8th book which is in alternate lines of five and seven syllables. The narrative portion of *Chiushingura* is often purely prosaic, while the dialogue is not seldom poetic or poetastic in diction. The narrative, it is true, is mostly sung, while the dialogue is recited in a kind of chant, not simply spoken. That I was fully aware of all this elementary stuff, both as regards the *Joruri* and *Takasago*, is abundantly clear from my book. How could it be otherwise seeing the distinction is marked on almost every page?

Daijo.—Here too I am quite right. The first book is, I think, called *Daijo* on its cover,—hence I could not but know that the whole of it was the *Daijo*. But the portion I term 'preface' is separate in sense from the rest, and states briefly the 'motive' or occasion of the whole work. In the first form of my translation, which was dramatic, I called it 'Prologue,' and this, perhaps, were better retained.

Takasago.—What I have said in connection with *joruri* applies in great part here. I heard *Takasago* in '65 or '66 recited at Katase by a *rônin*. My text is taken from a work in some twenty volumes called *Yôkiyoku jû-hachiban*—'18 *Yôkiyoku*' (a misnomer as there are some thirty). *Yôkiyoku* I cannot find in any dictionary, but both characters according to Williams mean 'ballad.' They are, likely enough, identical with '*No*,' but are sufficiently re-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

semblant to ballads, which were formerly sung or recited with mime and gesture, to justify their being so called. The very word 'ballad,' indeed, is connected with the Italian '*ballare*' to dance, whence our 'ball.'

As the whole would be part sung, part recited in a kind of chant, I was right in treating the whole as versifiable. Your critic might be a contributor to Moses' advertisements, confounding, as he does, verse with 'potry.' Let me quote a bit of such 'potry' for his delectation—the last stanza of the old English ballad of Robin Hood and Guy of Gisborne:

'But he cold neither runne soe fast,
'Nor away soe fast cold ryde
'But Lytle John with an arrowe soe broade
'He shotte him into the [illegible]syde.

I say that 'Imperial' and 'Majesty' are perfectly proper terms to apply to the Shôguns of the Ashikaga period. They exercised an '*imperium in imperio*,' had their own court and nobility, and in the *Jiruri* their palace is called *gosho*, the name given to the Imperial residence at Kiôto.

Lastly as to the translations that 'speak for themselves.' They are, excepting the first and last slightly altered in expression, true versions of the text I used, which was in great part transcribed, in *ji* and *kana*, partly from the *Kusayoshi* (which I have lost, and of which the print was extremely bad), partly from the *Jiruri* (of which I have mislaid the first and some other *livraisons*). The differences between your critics' versions and mine are plainly due for the most part—supposing even the same texts to have been used—to purposed omissions.

I may add that in my text there is nothing whatever translateable as 'says bluntly,' 'touching your hand,' 'raw-faced youngster,' etc., etc.; and the word '*dosujitari*,' which your Reviewer translates 'you go too far' (a pretty weak expression for a man in a towering rage like the speaker), I, following Hepburn, translate 'interrupt.'

MR. DICKINS' *CHIUSHINGURA*.

To the Editor of the "Japan Weekly Mail."

Yokohama, 30th November, 1876.

Sir.—It will be admitted, I believe, without contradiction that the feeling of the public towards those who have contributed to our knowledge of Japanese literature is one of genuine gratitude. When a critic in the *Saturday Review* declared that Mr. Mitford's first translation of a Japanese Sermon was a pure fabrication, we laughed. When the same reviewer, still smarting under the rebuke which his blunder so richly deserved, meted out rather squeamishly some praise to the charming "Tales of Old Japan," but gravely wound up his criticism with the statement that Mr. Mitford's translation was far from accurate, we roared. Some allowance, however, had to be made for the time, place and circumstances of the London critic.

But that is an old story.

"The standard of Japanese scholarship," now says your Reviewer of Mr. Dickins' *Chinshingura*, "has been greatly raised of late years. For one competent Japanese "scholar whom we had ten years ago, there are now a "dozen, and in the interest of Japanese scholarships, we "feel bound to do what in us lies to prevent the standard "being lowered."

On reading this, we felt confident that the standard of criticism also had been raised higher than it stood seven years ago. We expected that your Reviewer, after dwelling on the demerits of the translation, would take in his own masterly hands the work of an unskilled translator; that he was going to give us a vivid picture of the time in which the forty seven *ronin* lived, and drawing ample illustrations from his own fund of erudition, show us how the men and women of that period thought and talked. This, we felt confident, was not too much to expect from a critic whose researches, if we judge from his preamble, have covered the whole field of Japanese Literature, ancient and modern. We have been disappointed. Your reviewer's strictures on Mr. Dickins' version are those of a school-master, not of a critic. Taking his scholarship as granted, we admit that they entitle him to the thanks of Japanese students; still, we find it hard to believe that the scholar who gave us many years ago a volume of translations of Japanese poetry is incapable of discriminating between verse and prose. We presume to question his authority for so summarily sending the translator of the *Chiushingura*, after his briefs and the pursuit of the several other branches of learning in which he condescends to acknowledge this gentleman's proficiency.

A critic has said: "If our remarks give pain to Mr. "Robert Montgomery, we are sorry for it. But, at what-"ever cost of pain to individuals, literature must be "purified....." But then, the critic was Macaulay. We cannot forget that Macaulay after exposing a bad poet knew how to kindle his readers with his own admiration for the great masters of poetry, of philosophy, of statesmanship. Knowing how to punish, his criticism was never barren. Pruning is a useful art; but is the tree of Japanese knowledge so luxuriant that the axe should already be applied to it? Although true Japanese scholars may, we are told, be now counted by the dozen, how many new treasures, we will presume to ask, have been laid open for the public during Mr. Satow's absence from Japan? If we can now understand the drama which has enraptured generation after generation of Japanese playgoers, are not our thanks due after all to Mr. Dickins, and to him alone? Ought we, because he takes a stirrup for a bit or a bit for a stirrup to throw his translation in the fire and only keep the illustrations? Because thou art virtuous, shall there be no more cakes and ale?

A man once wrote a poem and took it to Voltaire who returned the manuscript to the author saying: "Faites des perruques, mon ami, faites des perruques." But then, the poet was only a "perruquier," and his critic was the patriarch of Ferney. A perfect storm of censure and criticism is just now bursting over Mr. Dickins' devoted head; he need not be much afraid however, for, as far as we can see the wind blows not from Ferney.

I remain, Sir,
Your obedient servant,
Z.

ÔGON, ÔBAN AND *KOBAN*.

To the Editor of the "Japan Weekly Mail."

Tôkiô, November 28th 1876.

Dear Sir,—As you have in your last issue pointed out a few of the errors to be found in Mr. F. V. Dickins' translation of the *Chiushingura*, it may not be out of place also to correct the erroneous information concerning the word *Ôgon* supplied by Mr. Dickins in the appendix, pag. 16, viz: "*Ogon*, Coins of various values, but com-"monly, I am informed, equivalent to 21 *riyos*. The "coin, which was generally of silver gilt, was rarely, if "ever, intrinsically of its current value. It was an "oblong, thin disk, rounded at either end, and tightly "wrapped in paper, stamped with the seal of the pro-"vince, and marked with its current value."

Coins, consisting of a thin gold plate, of elliptical shape, and commonly known as *Oban* ("the large stamp") and *Koban* ("the small stamp") were, it is generally believed, issued for the first time by Nobunaga, in the period called *Ten-shô* (1573-1591).

The *Ôban* bore various stamped marks on both sides, but its value was not indicated. An inscription in ink, however, covering the greater part of one side of the coin, stated it to *weigh* 10 *Riyô*,—the *Riyô* being a weight originally equal to 5 *momme*, but at times varying between 4 and 5 *momme*, and now used by apothecaries as equal to 4 *momme*. The *Ôban* was called *Ôgon ichi mai*, but *Ôgon* is not the name of a coin, any more than *Bannai*, as remarked by you, is the name of an office; and as is the case with the word *Bannai*, a more perfect knowledge of the written character would have shown Mr. Dickins that *Ôgon* simply means "yellow metal," and is synonymous with *Kin*, gold. In fact, the *Ôban* was as frequently called and written *Kin ichi mai*, which, as well as *Ôgon ichi mai*, means: One piece of gold.

The *Koban* had no inscription in ink, but the coin was impressed with the words: *Ichi riyô* and the *Koban* was generally called *Kin ichi riyô* or *Ogon ichi riyô*—but *never Ichi mai*. Thus *Ôgon ichi mai* was equal to *Ôgon jiu riyô* (Ten *Riyô* Gold) or 10 *Koban*.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The passage in the original *Chinshingura*, where the presents offered to Moronawo are enumerated, reads: "*Ôgon Sanjiu Mai*" etc., and should consequently have been translated 300 *Riyô* Gold,—or 30 *Ôban*.

When to the above I add that there never existed a Japanese gold coin weighing 21 *Riyô*, it will be apparent, that to speak of *Ôgon* as being "coins of various values, commonly equivalent to 21 *Riyôs*," is very much like defining the word "Sterling" as "coins of various values, but commonly weighing two pounds and a half."

The coins above mentioned were not "silver gilt," but consisted throughout of gold, alloyed with silver. A purer gloss of gold was, however, produced by immersing the coin, after it was made, in a chemical solution, which removed the silver particles from the surface.

The weight of the pieces as well as the quality of the alloy deteriorated with almost every new coinage; but the coins continued to bear the same inscription, and passed under the same name. Mr. Dickins would therefore have been more correct in stating that the coins were seldom of the *weight* indicated.

As to the gold coins being "tightly wrapped in paper, "stamped with the seal of the province and marked with "its current value," I fear this is a misconception of Mr. Dickins', probably arising from the above mentioned inscription in ink on the *Ôban*, which not only gave the weight of the coin, but also the *Kakihan* (written seal) of the member of the Gotô family, who for the time being held the position of a kind of Comptroller to the *Kin Gin Za* (Mint), an office which was hereditary in the said family from Nobunaga's time till the fall of the Tokugawa Shôguns. Whatever may have been the case with the *Ôban*, which was principally used in making presents, and seldom as currency, the *Koban* was certainly not wrapped up in the way mentioned by Mr. Dickins.

I am, Dear Sir,
Yours faithfully,
WILLIAM BRAMSEN.

— —

SILK WORMS' EGGS.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 1st December, 1876.

SIR,—I find in your last issue the following statement: "Two new features (viz., shipments for native account, "and shipments to Europe *viâ* United States) have been "developed in the Silk-worms' eggs trade which are ex- "citing much interest among those concerned in this "business, etc., etc."

Your informant is evidently not one of the concerned. Shipments for Europe *viâ* San Francisco, overland to New York commenced shortly after the establishment of the P. M. S. S. Co's line, and have continued ever since. The shipments of this season are therefore not a new experiment, but the result of full experience. Nor are shipments for native account *viâ* San Francisco or Suez a new fact. On various occasions native consignments have been placed in the hands of foreign houses. The one novel feature of the present season is this: A Japanese association guided by advices received from the Japanese Consulates of Italy and supported by a Japanese Bank, which is itself reported to be connected with the Government, takes a large share in the export. Their shipments are accompanied by Japanese agents who are to have the control of the sale in Europe. Their operation has been early and deliberately planned; it has shaped the whole course of the market, and it is by no means proved that the goods shipped by that Association could not have been bought by the "Graineurs" on terms equally or more advantageous to the sellers. Of the several and conflicting interests concerned in the trade, which is to profit or loose by this innovation remains to be seen.

I remain, Sir,
Your obedient servant,
X.

Prince Orloff, the Russian Ambassador, at the dinner given at the Russian Embassy at Paris last week, proposed a toast to the prosperity of France, in which he dwelt upon the efforts that Russia has made, is now making, and will continue to make, for the maintenance of European peace.

Law & Police.

IN H. B. M.'s PROVINCIAL COURT.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Saturday, November 25th, 1876.

A. JAFFRAY v. T. S. LILLEY.

Plaintiff claimed $15 for carriage hire.

Both plaintiff and defendant appeared personally.

Andrew Jaffray sworn, stated:—I am a livery stable keeper at No. 123. Mr. Lilley hired carriages from me several times. First on September 3rd, then on the 5th and 8th; these two latter items remaining unpaid. The bill was sent on board the *Sunda* at his own request, I think three times. He wrote inside the envelope that he would call in the evening to settle.

Defendant admitted the claim. He said he was 4th officer on board the *Sunda*. He had sent across to San Francisco for some money and expected to receive it on the 10th December; but till then he would not be able to pay the amount claimed.

His Honour ordered that the $15 should be forthcoming on the arrival of the *Belgic*, and that defendant should pay $3 costs besides.

Tuesday, November 28th, 1876.

JOHN BROWN v. J. GRUNDY.

This was an action to enforce payment of the $60 for which judgment was given by the Court on the 26th September last.

Both plaintiff and defendant appeared personally.

James Grundy, sworn, stated:—I live at No. 106, but have no profession.

Plaintiff had no questions to ask. He had been promised payment of his bill in $10 monthly instalments, and defendant had not kept the agreement.

Defendant, to Court:—I receive $50 per month from the Oriental Bank. I agreed to pay plaintiff $10 a month on the judgment given in this Court, and I have fulfilled the agreement. I do not think anything else was mentioned. I was expecting money from home, having written for it. Brown's bill was for board, lodging and refreshments. I lived at his house, the *Alhambra*. Part of this debt was for my mess. I have no money now. I receive next on the first December, but can not pay him more than $5.

The Court said this would not do. He must pay $10 on the 1st of December, or be imprisoned. This hearing would therefore be adjourned till Tuesday next, the 2nd proximo, when defendant must appear and inform the Court if this had been done.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before ED. ZAPPE, Esq., Consul.

Monday, Nov. 27th, 1876.

KANAGAWA KENCHO v. P. BOHM.

This was a claim for two years' ground rent due on defendant's property at Nos. 114 and 119, in all $246.66, with 5 per cent annual interest from the beginning of this year, and costs.

Mr. Benson appeared for plaintiffs; defendant appeared personally, and stated to the Court that he acknowledged the claim but had withheld settling till the streets in his locality had been made like those in other parts of the settlement. He was willing to deposit the amount in the Consulate until this had been done by the plaintiffs.

The Court would not listen to this argument, but ordered defendant to pay the amount claimed, with costs.

Messrs. Francke and Peltzer, Assessors.

Friday, December 1st, 1876.

TAKEDA KISABURO v. G NACHTIGAL.

This was a claim for $109 with interest from November, 187 for extra work alleged to have been done by order of defendant on the premises built for Mr. Von Hemert at No. 26. That gentleman had refused to pay this amount, therefore plaintiff brought the suit against defendant.

Mr. Ph. Von Hemert sworn, stated:—I contracted with plaintiff for the building of the house in which Mr. Nachtigal now lives, and authorised that gentleman to order such alterations as he thought would be necessary. This plaintiff was obliged to do according to contract and it could in nowise be considered extra work. Mr. Stibolt, whose duty it was to see that the work was properly executed, was not often to be seen on the premises, and I therefore asked Mr. Nachtigal to look after it.

The bills for extra work were now read over by witness. There were two; and with regard to the 1st item in the first one, relating to a small partition made in a room upstairs and which could not

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

have cost more than $50, he, witness, authorised defendant to order it to be put up. Witness forgot whether he told plaintiff personally or through defendant about the zinc conductors which constitute the 2nd item, but he knew they were constructed with his knowledge. As to the 3rd, he did not recollect ordering the erection of the covered way from the dwelling to the out houses. Witness said, with regard to the second bill, he did not remember whether any of the improvements mentioned had been carried out or not. He was further of opinion that all this claim had already been settled in the case brought against him in the Dutch Court, and therefore considered the matter altogether finished.

Verdict against plaintiff, who was also ordered to pay costs.

IN THE JUDICIAL COURT OF KANAGAWA.

Before ASAINA KANSUI, Esq., Vice-President.

Saturday, November 25, 1876.

H. AHLERS & Co. *v.* OMIA SHOJIYA.

This was an action to compel defendant to take delivery of and pay for a quantity of Presidents cloth sold to him by plaintiffs. Defendant had contracted to take delivery of the same at the end of last month, but did not do so on the plea that they were not according to sample.

Plaintiffs were represented by Mr. E. Schmid; defendant appeared personally.

Mr. Schmid said that his case had been fully stated in the petition and he would only add that at the time of this sale the demand for the article was very brisk, and when the contract was signed defendant had already seen a sample of the cloth and did not ask to get another, so that the quality was not mentioned in the contract. Furthermore defendant was very anxious at that time to get these goods on the terms offered by plaintiffs. There was only one original contract which was without a postscript, and he would ask whether defendant had handed into Court any document, with a postscript, alleged to be the contract. If so, that document must be a forgery, for he now handed in the original contract.

The Court stated that no such document had been handed in, though defendant had mentioned the postscript in his answer to the petition.

Defendant said he had received a sample of the cloth, and on the strength of that he had signed the contract. He refused to take delivery when the goods arrived because he saw they were not according to sample.

Plaintiffs stated that defendant had not received a sample till several days after the contract was signed, and when the market had gone down considerably. As to the sample now in Court, who could say whether the cloth inside the cover, which they asserted to be that of the firm, had been changed or not? It was a thing easily done. It was probable that defendant asked for this sample when the market had gone down, so that he could by trickery defend himself against the consequences of a breach of contract.

Defendant now said that he saw it was a mistake on his part when he stated that a postscript to the contract mentioned the quality of the cloth.

Mr. Schmid called as witness a Japanese merchant who had accompanied defendant to No. 29.

Takahashiya stated to the Court:- I remember accompanying defendant to plaintiffs office on the 1st of November to examine some cloth, to see whether it was according to the sample. I am a cloth merchant and at once gave my opinion that the cloth was not equal to the sample, though plaintiffs' banto contended that it was. Defendant wanted to have the price lowered, but plaintiffs would not listen to that, but only promised an extension of the time for taking delivery. So the negociation was broken off.

Plaintiffs denied this statement, and said that witness had never told their banto that the goods were not like the sample.

Tago, plaintiffs' banto, was now called and stated that Takahashiya had come with defendant to their office, and brought the sample and asked to compare it with the cloth. It was shown to them, and Takahashiya said that as some of the cloth was in boxes and some in bales the slight difference in the appearance of the goods might easily be accounted for. He gave his opinion that the cloth was according to sample.

Riske, another banto, corroborated the above statements, and in addition first stated that the sample had been given to defendant before, and then correcting himself, after the signing of the contract.

The Judge said that as witness was so unsteady in his evidence no notice of it would be taken so far.

Court adjourned till Monday, 4th proximo.

Wednesday, November 29th, 1876.

MALCOLM, WILLCOX & Co. *v.* SINANOYA ZENPUKE.

This was a petition that defendant be ordered to take delivery of a quantity of velvet sold to him by plaintiffs, value $2,660. Defendant's plea for not taking delivery was that the velvet was not according to sample.

Plaintiffs were represented by Mr. Temple Willcox; defendant appeared personally.

Mr. Willcox stated: In addition to what is already said in the petition, I may state that this velvet was bought to arrive. 300 pieces in two lots of 150, each of these two lots having its own sample, and the price being fixed at $8.87½ per piece. When the first lot arrived by the *Montalan*, defendant examined and accepted the goods, as the contract stipulated that delivery should be taken from the hatoba. Defendant said he was unable to take them at once, and six days were allowed for him to obtain the means he was in want of. This was on an agreement in writing to pay interest on the purchase money and coolie hire. (Document put in with the petition.) At the end of six days defendant intimated that the goods were not according to sample and begged for a reduction in the price. We would not do so, however, as we had already notified the shippers at home of the sale and it was a consignment. To save trouble we agreed to have the case arbitrated, and an examiner was appointed by both parties. Meanwhile the second lot had arrived, and defendant was notified of the fact. He took no notice, however, and the goods were removed to our godown. Mr. Walter was our arbitrator chosen, and he not defendant's arbitrator, who, however, would not admit of any argument on the matter, but insisted on a cancelling of the contract. We would not submit to this. The value of the goods since the sale had deteriorated from 90 cents to $1 per piece, and finding that defendant would not come to terms we offered to reduce the price by 25 cents per piece. Defendant declined. There was at first no talk of cancelling the contract, only a reduction in prices was thought of. At the time of the arbitration defendant had not even seen any of the second lot and could not say whether it was equal to sample or not, nor has he yet seen it, so that it is a false statement which he makes in his answer to our petition. He was willing to pay interest on the purchase money when he begged a respite in taking delivery of the first lot on its arrival.

His Honour: The contract does not say that defendant was to take delivery at the hatoba.

Mr. Willcox. No, but it was agreed upon, notwithstanding; for defendant signed a document after the arrival of the velvet by which he undertook certain obligations for being relieved from taking the goods from the hatoba.

Defendant now handed in two samples which were admitted by Mr. Willcox to be those given him by the firm.

Defendant stated:—I had sold the first lot to another party in Tōkiō, and I examined the velvet on arrival. I thought it was not equal to the sample, but was not sure if the party to whom I had sold it would not take it even with this difference. I asked for a delay of six days and took a piece of the cloth to show to the purchaser in Tōkiō. In the arrangement for arbitration, no mention was made regarding either a total cancellation of the contract or a reduction in the price of the velvet.

Mr. Willcox stated that he had witnesses to prove that a reduction in the price was spoken of only. It was a custom in the Yokohama trade to give the purchasers on the arrival of goods a whole piece, as more convenient than the small piece given as sample. This had been done in this case.

Plaintiffs' compradore and *banto* now gave their evidence.

The Court said that it found the documents stipulating interest on the purchase money had been interpreted differently by the *banto* and the compradore. It contains a note that defendant took away a sample, and does not say that he accepted the goods. Plaintiffs admitted that there was some difference between the sample and the goods themselves, and it was not clear, therefore, that the Court should order defendant to take delivery of them.

Mr. Willcox said that it was almost impossible to guarantee a perfect identity of colour in such articles, and that is never considered a sufficient reason for the cancelling of a contract. In the last lot there is not the slightest difference.

The case was adjourned till Wednesday the 6th proximo, when the evidence of the Japanese arbitrator will be heard.

THE INCREASING DIFFICULTIES IN THE EAST OF EUROPE.

(The Economist.)

The difficulties of the "Eastern question," as it is called still continue, and what is some compensation for them, they are beginning to be clearly seen. From a short time after the authentication of the Bulgarian atrocities, and after the publication of Mr. Gladstone's pamphlet, it seemed to be thought that they were as easy to cure as they were to denounce. But now we are getting to see of how complex a state of relations they are the result; how hard it is to alter that state; how far England is from the real scene of action; how much nearer the great military Powers are; how much greater their power is. We see, too, that we have to do with a permanent, not a temporary, question; that the Turkish Empire is breaking up; that a successor to it must be found, and that we are wholly unable to determine whom its successor shall be, or to foresee whom it it will be. For a moment a truce may with difficulty be arranged, though even this is most dubious. But soon the inevitable conflict will again begin, and we shall have to take the greatest care that no fancied interest, and no ill-regulated sympathy induce us to take part in it.

The events of the week bring out this in detail. First, they show *how* Turkey is breaking up. The Sclavonic provinces of Russia, with the acquiescence, if not the aid, of the Russian Government, are helping Servia; indeed, much of her army is becoming in feeling Russian, and its leading officers are already Russian. And this is the usual way in which such Empires as the Turkish break up—by the sympathy of adjoining races, who wish to free those allied to them from a hated yoke, and by the natural ambition of the strongest neighbouring Government to use that sympathy to increase its power. Secondly, the nearness of the scramble—if we may so call it—for the succession of Turkey is beginning. Russia has proposed that she shall occupy Bulgaria, and that Austria shall occupy other provinces; and if Russia is once in possession of Bulgaria (in which, no doubt, she would like to include Philippopolis and the seat of the horrors), all Europe could scarcely induce her to go out again, for she would hold the line of the Balkan, and the part of Turkey which almost of necessity commands the rest. Thirdly, it is certain that the demands made by the Powers are interpreted very differently by them. Russia wants, for obvious reasons, a Sclavonic State, or a series of them in the place of Turkey; and Austria, for reasons which we elsewhere explain at length, can hardly permit the formation of that State without peril to her own existence. Lastly, it is evident that Turkey sees this real, though latest division of opinion, and, therefore, will not agree to what the Powers ask her to do. And all these circumstances added together make a danger as great as it is complicated.

But even these are not the whole danger. Suppose the best which can be expected from the present negotiations, that which Mr. Foster sketched at Bradford, viz., a set of privileges given to the Christians of Turkey, with a right of inspection by the great Powers to see that these privileges were not infringed, and a right of interference to restore them if infringed. Why, this which Mr. Forster hopes for seems to be the one thing most to be dreaded. We shall have undertaken to see that a certain arrangement shall be carried out. We shall be bound to go to war with Turkey if it is not carried out; and we know that we make that arrangement in conjunction with Russia, who looks to it as the beginning of a new future, and with Austria, who intends it shall not have that beginning. We shall have little power of doing real good under such a treaty, but may easily incur a risk which only the greatest good could justify. We may be drawn into a general war by the demands of those whom we have undertaken to benefit, and a quarrel between our co-signitaries—one fomenting and the other repressing those demands. The key to the whole subject is that all these arrangements for maintaining Turkey and for guaranteeing privileges to its subjects depend on the substantial agreements of the "great Powers," and we know that those Powers are in substantial disagreement.

We certainly cannot interfere in a scene so marked and so dangerous except for some plain duty or some clear interest. Of these, three are alleged:

Frst,—It is said, that by supporting Turkey in the Crimean war we incurred a responsibility to see that she governed rightly ever after? "you would not," it is said "let Russia take her and preserve the Christians, and therefore you must preserve them yourselves." But this is a mistaken reading of the Crimean events. All we did twenty years ago was to postpone what is now happening—we maintained then the Ottoman Empire. But if we had not maintained it the same causes that have produced the atrocities now would have been in existence then,—would have been equally strong then, and would probably have caused the same crimes. The weakness mixed with desperation of the Turkish Government, and ferocious hatred of the bigoted part of the Mussulman population against the Christian, are the causes of what has happened now, and they would have equally caused them whenever the Turkish Empire broke up. Russia, we must recollect, was not in Constantinople in 1854; even if England and France had stood aloof, she would still have had Turkey to deal with, and the defence of Silistria, as well as the events of 1828, show that in a war of existence she would have proved desperate resolution, put forth great forces, and maintained a great struggle, during which far worse horrors than those which have now happened must inevitably have occurred, and must have been aggravated by the peculiar circumstances of that time. Russia was then interfering in Turkey on behalf of the Christians, and the Turks would have taken their revenge on the Christians before they let the Russians destroy them.

Secondly,—It is said that at the Treaty of Paris the great Powers of Europe who signed that treaty were substituted for Russia as guardians of the Christians. But this is a complete mistake. The Treaty of Paris not only does not authorise the great Powers to interfere—it forbids them to interfere. The 9th article of that treaty, after saying that the Sultan has voluntarily issued a firman giving certain rights to the signatories, and that the "Powers" respect its value, goes on to add expressly:—"It is understood "that it can in no case give the said Powers a right to interfere, "either separately or collectively, in the relations of his Majesty "the Sultan with his subjects, nor in the interior administration "of his Empire." And Lord Palmerston, in defending the Treaty, after describing that the war was in truth owing to the alleged right of the Russians to intervene on behalf of the Christians, said that if the Powers had obtained such a right, as some then argued that they ought, "the only effect of a war commenced to maintain "the independence of the Sultan, and to protect him against an "authoritative interference of foreign Powers, would have been to "multiply by five the evil which he had previously resisted, and "to give to the Allies those very powers against which they took "arms to defend the Sultan. Therefore, a war to maintain the "independence of the Sultan would have ended in utterly destroying that independence. We felt that it would have been utterly "inconsistent with the objects and principles laid down at the "commencement of the war to frame the Treaty in such a manner "as to give an authoritative right of interference between the "Sultan and his subjects."

So that the notion of our having undertaken, in 1856, a duty to the Turkish Christians which we are bound to perform now, is simply a mistake. We are in no way more bound to remove the causes of their sufferings or to prevent the recurrence of the crimes for which they have suffered, than we are to do the same by any other crimes and sufferings in the world.

Lastly,—It is said that we must act with the great Powers from interest, if not from duty, or otherwise Russia will get Constantinople. But "the obvious reply is, will acting with the Powers keep Russia out of Constantinople?" If the great Powers really help the Christians it will be by aiding to break up Turkey, and by placing in her stead Slavonic and Greek nations if, and in so far, as these nations can govern themselves. But these new States will almost of necessity be Russian in sympathy, for it is Russia which will have made them and which maintains them. They will be outposts of Russia—parts of her, in fact, if not in name—and for all that we might wish or fear in war, they might as well be parts of her in fact, for they would neither have the power nor the inclination to refuse to do what she desired. In a word, Russia has hitherto been kept out of Constantinople by the Turks; if the main aim of the new policy is to destroy the Turks, what other force on the spot, and equal to the task, is to be found?

Both duty and interest, therefore, seem to us to combine to make us abstain entirely from serious action in the Eastern question at this moment. There is much to show that a great struggle is coming, and we should be very careful to do nothing which, unawares, may oblige us to take part in a conflict so fearful.

It is the province of sympathy to render us alive to the evils of those around us; so it is equally the province of reason and good sense to save the mind from too deep an interest in afflictions which we can neither prevent nor remedy. No doubt, therefore, it is the perfection of the human character to be at once equal to its own happiness, and yet sensible to those miseries of our fellow-creatures which its exertions can alleviate. —*Professor Smyth.*

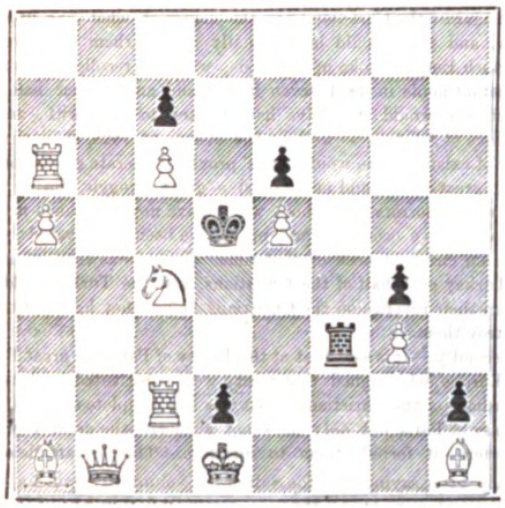
PROBLEM

By Mr. F. Healey.

BLACK.



WHITE.

White to play and mate in 2 moves.

(From the Westminister Papers.)

The following position occurred in a game played by two amateurs at the Chess Divan, London.

White.—King at K.'s 3rd.
Pawns at K. Kt.'s 4th, K. R.'s 5th, K. B.'s 4th, and Q. R.'s 2nd.

Black.—King at K. Kt.'s 4th.
Bishop at Q. B.'s square.
Pawn at Q. B.'s 6th.

Black having the move, agreed to consider the game as drawn. A looker on then explained how by making a certain move Black must necessarily win.

Mr. S. Lloyd's Problem of last Week.

The answer of Q. to R.'s sq., etc., has been received from W. B. M., W. H. S., and D. J. of Tōkiō, and E. J. R. and C. B. of Yokohama, without saying why Black should not castle, so we reserve the solution until next week.

Shipping Intelligence.

ARRIVALS.

Nov. 25, *Palos*, U S. gun-boat Captain A. S. Baker, 6 guns, 305 from Nagasaki, Nov. 26

Nov. 28, *Peeress*, British barque, Miller, 780, from London, June 2nd, General, to L. Knüffler & Co.

Nov. 28, *Sumida Maru*, Japanese steamer, Gorlach, 896, from Hakodate, Nov. 26, Mails and General, to M. B. Co.

Nov. 29, *Malacca*, British steamer, Edmond, 1,709, from Hongkong, Nov. 22nd, Mails and General, to P. & O. Co.

Nov. 30, *Nagoya Maru*, Japanese steamer, Conner, 1,917, from Shanghai and ports, Mails and General, to M. B. Co.

Nov 30, *Alaska*, American steamer, Howard, 4,012, from San Francisco, Nov. 1, Mails and General to P. M. S. S. Co.

DEPARTURES.

Nov. 25 *Tsuruga Maru*, Japanese steamer, Hussey, 800, for Kobe, Mails and General, despatched by M. B. Co.

Nov. 25, *Modeste*, H.M. corv., Captain Buller, 1,405, for Kobe.

Nov. 28, *City of Peking*, American steamer, Tanner, 5,076, for San Francisco, Mails and General, despatched by P. M. S. S Co.

Nov. 28, *Sunda*, British steamer, Reeves, 1,029, for Hongkong, Mails and General, despatched by P. & O. Co.

Nov. 28, *Tokai Maru*, Japanese steamer, Ward, 645, for Kobe, Mails and General, despatched by M. B. Co.

Nov. 29, *Elgin*, British steamer, Miller, 900, for Kobe, General, despatched by Jardine, Matheson & Co.

Dec. 1, *Mary Jane*, American schooner, Brinkmayer, 165, for Kobe, General, despatched by E. C. Kirby & Co.

Dec. 1, *Nevada*, American steamer, Williams, 2,145, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Dec. 1, *Alaska*, American steamer, Howard, 4,010, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

PASSENGERS.

Per Steamship *City of Peking* for San Francisco.—Mrs. G. F. Thompson, and child, Dr. S. W. Williams, Messrs. H. S. Chipman, J. R. Morse, John F. Twombly, Yanegiya, G. Ragnoli, Carlo Gerosa, G. Butler, G. Marraldi, S. Iwasaki, T. Kawasima, Captain Lemmerschuffely, Pietro Bertone, C. Ginesani, De Carstoforis, F. B. Mills, Mebora, Amania, Tsuto Kawa, and twenty-three Europeans and one Chinese in the steerage.

Per Steamship *Sunda* for Hongkong.—Lieut. Beatty, R.N., Mr. S. C. May, Mr. J. Carey, Mrs. Wye Sing, Mr. and Mrs. Ah Lut and child, and 13 Chinese in the steerage

Per British barque *Peeress* from London.—Messrs. Thos. Farquharson and Rodger Hamilton.

Per Steamship *Malacca* from Hongkong.—Mrs. Griffin and 2 children, Messrs. Aspinwall, Kench, Hunter, Begbie, J. Palmer, and 5 in the steerage.

Per Steamship *Nagoya Maru* from Shanghai and ports.—Mr. and Mrs. Shene, Mrs. J. B. Faulconer, Messrs. A. Jones, E. H. N. Gower, E. Griolet, F. Dillon, J. Gray, John Johnson, Varuet, Klein, and 9 Japanese in the cabin; and 1 European, 190 Japanese and 6 Chinese in the steerage.

Per Steamship *Alaska* from San Francisco.—Mr. and Mrs. M. A. Metcalf, and daughter, Mr. and Mrs. J. F. Seaman, Messrs. E. N. Whitehouse, U.S.N., David Mouat, U.S.N., Bishop E. M. Marvin, Revd. E. R. Hendrie, Dr. Robt. Poll, A. de Claperide, Chas. Gotting, Henry W. Rankin, S. Nagaye, K. Okkots, H. F. Antell, Geo. Whiteley, Chas. McFarland, H. Mujake, J. R. Nyesugi, G. Wrey, and 4 in the steerage. For Hongkong.—Miss M. C. Thompson, Messrs. H. N. Palmer, W. M. Dolan, Revd. Wm. Dean, F. P. de Cembrano, Geo. Curtis; 2 Europeans and 571 Chinese in the steerage.

Per Steamship *Alaska* for Hongkong:—Revd. Wm. Dean, Miss M. C. Thompson, Messrs. F. P. de Cembrano, Geo. Curtis, H. N. Palmer, J. Lykeardople, W. Heaven, W. Dolan; 2 Europeans in the steerage

Per Steamship *Nevada* for Shanghai and ports.—Mrs. Yates, Mrs. A. E. Randolph, Mr. and Mrs. Seaman, Mr. and Mrs. Metcalf, Miss Metcalf, Mr. and Mrs. Tuk Sing, Dr. Wernich, Messrs. E. M. Whitehouse, Paymaster U.S.N., N. H. Cook, T. Farham, T. B. Glover, Walker, Sutherland, E. Popp, Henriques, and 10 Japanese in the cabin.

CARGO.

Per Steamship *Sunda* for Hongkong.—

Silk for England	...	111 bales.
France	...	50 „
Italy	...	14 „
Total	...	175 bales.
Silk-worms' Eggs	...	7 cases.

Per Steamship *Nagoya Maru* from Shanghai and ports —

Treasure	$2,500
„	*yen* 60,000

Per Steamship *Nevada* from Shanghai.

Treasure	$36,000
„	*yen* 141,412

REPORTS.

The *Peeress* reports: Left London June 2nd, and Start Point June 10th. Experienced very light winds down to the Equator, which was crossed in Long. 23°, July 18th. Passed Tristan Da Cunha, August 10th; from thence fresh, favourable winds till arrival at N. W. Cape of Australia, September 13th. From that point met with light winds and calms. Made Rotti Island September 23rd, and passed through Manipa Strait, October 3rd, and Gilolo Passage October 23rd. Thence moderate and variable winds till November 18th, when a heavy gale was encountered which drove the ship far to the Eastward, and ten days have since been occupied in making this port.

The *Malacca* reports fine pleasant weather throughout the passage.

The *Alaska* reports: Left San Francisco November 1st, 1876, at 12 m, with 27 cabin, 6 European steerage, and 571 Chinese passengers. Experienced moderate south-westerly winds during the entire passage.

Camlet Cords ... ... 29—30 yds. 32 in. ...	5.75 to 6.00	Pilots ... ...54 in. to 56 in...	0.45 to 0.60
Camlets Asstd. ... ... 56—58 yds. 31 in. ...	16.50 to 17.50	Union ... ...54 in. to 56 in...	0.60 to 0.75
Lastings, Japan .. .. 22—30 yds. 32 in. ...	12.00 to 13.00	Blankets, scarlet & green 6 to 8 lbs....per lb ...	0.42 to 0.48
Plain Mousseline de Laine —30 yds. 30 in. ...	0.18½ to 0.19½		

Sugar.—There has been a gradually rising market throughout the week, but holders are not generally desirous of selling even at the advance.

Sugar:—Takao in bag ... ...per picul...	$4.40	China No. 4 Kook-fah ... ...per picul...	$6.00
„ in basket ... ... „ ...	$4.20	„ No. 5 Kong-fun ... ... „ ...	$5.40
Taiwanfoo in bag... ... ... „ ...	$4.30	„ No. 6 E-pak ... ... „ ...	$4.50
do. in basket... ... ... „ ...	$4.10	Swatow Brawn ... ... „ ...	$3.40
China No 1 Ping-fah ... ... „ ...	$7.75	Daitong ... ... „ ...	$3.80
„ No. 2 Ching-pak ... ... „ ...	$7.10	Japan Rice	$2.30 to $2.35
„ No. 3 Ke-pak ... ... „ ...	$6.50	Kerosene Oil	$3.90 to $4.00

Kerosene Oil.—Transactions have been very limited since our last, as holders are unwilling to accept less than $4 per case.

EXPORTS.

Silk.—Since the 24th ultimo arrivals are 250 bales, and settlements barely amount to 300 bales, a very small business indeed if we consider the importance of the stock, which is over 3,000 bales. The fact is that there are very few purchasers in the market, and they can only buy at such reductions as few sellers are as yet prepared to submit to. We quote:

Hanks.—Best No. 1 and 2	$740 to	$760
„ Good No. 2	$710 to	$730
„ Medium No. 2½	$650 to	$700
„ Common No. 3 / „ Inferior No. 4 and 5	$580 to	$640
Oshiu.—Best	$680 to	$710
„ Medium to Good	$640 to	$670
Hamatski.—Common to Good	$530 to	$620
Kakeda.—Extra	$875	—
„ Best	$800 to	$830
„ Medium to Good	$750 to	$780
Sodai	$520 to	$570
"Filature" Silk	$800 to	$950

Silk-worms' Eggs.—The anticipation of a considerable fall in prices after the departure of the American mail of the 26th ultimo has been disappointed. Parcels of superior quality are no longer to be found, and we quote:

Annual Green, midling assortments Oshiu	$1.50 to	$1.75
„ „ „ „ Joshiu / Bushiu / Sinshiu	$1.25 to	$1.50
„ „ „ „ Other sorts	$0.80 to	$1.00
„ „ Inferior „ All sorts	$0.60 to	$0.75
„ White, Good	$0.80 to	$1.00
„ „ Common to Inferior	$0.60 to	$0.75

Tea.—Business has been very quiet during the past week, and owing to the unsatisfactory advices from New York, holders, who seem to be fully cognizant of the cause, have had a difficulty in pleasing the few buyers who have operated. Prices have consequently declined and close very weak.

Common	$10.00 to 12.00	Fine	$26.00 to 32.00
Good Common	13.00 to 15.00	Finest	33.00 to 37.00
Medium	17.00 to 19.00	Choice	40.00 to 47.00
Good Medium	20.00 to 23.00		[scarce.

EXCHANGE AND BULLION.

Exchange.—The continued absence of any demand for Bank Bills, together with the advices of higher rates in China, have had the effect of advancing rates here. Business has, however, been limited to small sales of Private Paper.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 2¾d.	On Shanghai—Bank sight	75
„ Bank Bills on demand	4s 1¾d.	„ Private 10 days sight	76
„ Private 6 months' sight	4s. 3¼d.	On New York—Bank Bills on demand	99
On Paris—Bank Sight	5.20	„ 30 days sight Private	101
„ Bank 6 months' sight	5.30	On San Francisco—Bank Bills on demand	99½
„ Private 6 ms. sight	5.40	„ 30 days sight Private	101¼
On Hongkong—Bank sight	par.	Kinsatz	390
„ Private 10 days' sight	1% dis.	Gold Yen	389

NEW ADVERTISEMENTS.

"THE TOKIO TIMES."

IN ACCORDANCE WITH PREVIOUS ANNOUNCEMENTS, THE FIRST NUMBER OF THIS

NEW WEEKLY PERIODICAL

WILL BE ISSUED

JANUARY 6th, 1877.

The terms of subscription and charges for advertising will be found below.

THE contents of this paper will usually relate to matters closely connected with the foreign and native interests of Japan and of those who dwell here. These subjects will receive attention in editorial articles, or in briefer paragraphs, as their importance may demand. Reports of current events will find such place as their significance may warrant. Correspondence from various parts of the empire and from abroad will be offered, and in most cases, will be limited to a range which shall include only topics of immediate attraction to those who are concerned in Japanese affairs. The same rule will apply to the literary or other reviews which may from time to time be required. Extracts from foreign journals, likewise, will be reproduced solely when they bear upon points which foreign residents and English-speaking Japanese would not wish to pass without notice. Excepting in rare instances, it is not purposed to enter a field of observation extending beyond the boundaries of the East.

Of the principles upon which the new publication will be conducted, and of the character which it hopes to secure and will strive to maintain, the projectors deem it unnecessary to speak with hasty assurance. However fixed their own views may be respecting the policy by which an enterprise of this kind should be guided, and however earnest their determination to fulfil that policy in such manner as to win the respect and invite the approval of the community, it is believed that a too minute declaration of the purposes aimed at and the special course of management to be pursued might be regarded as inexpedient and premature. It is proper to say that this reticence does not proceed from any indecision on the part of those who engage in the undertaking, which will be the mature result of designs that have long been entertained and the development of which has been thoughtfully considered. But there is always a certain awkwardness, and often an impropriety, in the attempt to make prefatory announcements by which the full scope and plan of a new journal shall be foreshadowed; and it is is thought, at least in the present instance, that the work itself may carry its own most trustworthy credentials. Sincerity of motive, integrity of performance, and such ability as it lies in the power of the conductors to bestow may, however, be guaranteed without bringing forward details in which the public would feel little interest. These features, it is hoped, will never be absent from the columns of THE TOKIO TIMES, and, when it is added that its chief animating impulse will be to assist, with what influence it can exert, in the advancement of all honorable effort toward progress in this country, and of all genuine desire to promote harmony between the growing intimacies with Western nations and the true interests of foreigners and Japanese alike, enough is said to enable readers to determine whether the enterprise is calculated to commend itself to their favor.

Japan has been the scene of so many misadventures in Journalism that a word in reference to the future intentions of the proprietors of this paper will not be out of place. Without reflecting in any way upon the brief course of those publications which accident or misfortune has brought to an early end, it may be laid down as a fair principle that no periodical ought ever to be established excepting under conditions that shall render certain its continuance for a considerable period. In too many instances within recollection, no such security has been provided for. Subscribers to THE TOKIO TIMES may feel thoroughly assured that this journal will not be allowed to die before its power of vitality has been amply tested. Under no circumstances will it cease to appear in less than a year from the date of the first issue; and, while no extravagant anticipations are indulged in, it is confidently believed that long before the expiration of that period, the enterprise will have proved itself sufficiently successful to justify the announcement of a permanent and uninterrupted career.

The terms of subscription to "THE TOKIO TIMES" will be.

TWELVE DOLLARS A YEAR.

The price of a single copy will be

TWENTY-FIVE CENTS.

Advertisements will be inserted in *The Tokio Times* at prices so moderate that deviations from the fixed rates must not be expected. The charge, for single issues, when less than a column is required, will be fifty cents for each inch or part of an inch. For one column, five dollars. One inch is equal to ten brevier lines; one column will contain eleven and a half inches. For insertions continued during one or two months a discount of ten per cent from the above rates will be allowed. For three, four or five months, a discount of twenty per cent. For six months, thirty per cent, and for one year, fifty per cent.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

Such Notices must be [illegible] accompanied with the name and address of the person by whom they are sent.

Yokohama, 23rd June, 1876.

Notes of the Week.

At the moment of going to press we have been favoured with the following telegram from a trustworthy source. "Telegram just received U. S. Consul, Nagasaki; Election settled. Hayes, President elect."

The last act of the rebellion closed, tragically enough, on the 3rd instant, with the execution of Mayebara and eleven of his principal adherents. Of those who took a less prominent though still leading part in it, many have been condemned to hard labour—whether for life or not is unknown—and some have been deprived of their rank, while a considerable number of the rank and file among the insurgents taken prisoners after engagements with the troops, have been acquitted. Less than this was not to be expected or hoped for. Mayebara's act was one of rebellion, and he who heads a rebellion against an established government stakes his life on the event. He has fallen, yet not unpitied. He appears from all accounts to have been a man of courage, resolution, great firmness of purpose and much conscientiousness. A translation will be found elsewhere throwing additional light on his character, and combining with others already published to justify this estimate of it. But it is quite clear that he was unable to understand the spirit of the age in which he lived, and it is to be feared that pique and personal jealousy of an unworthy nature were among the motives which induced him to conspire against the Government. These greatly detract from his moral stature, for they are paltry passions, though so much has been said in his favour that we are willing to think they were the infirmities of a nature not without some solid claims to admiration. Nor can it be doubted that he was impelled by patriotic motive to the course which ended so ill for him. Unmixed, this motive certainly was not; but the alloy was hardly a very base one. His manifesto showed an excessive bitterness against the leaders of the Government for the limitations placed by the present order of things upon the personal action of the Sovereign,—for thus it is that we read the paragraph open to this interpretation—and the translation which we publish to-day shows that he feared the material and moral decline of the country under the present Administration. We have no desire to palliate the great crime of which he has been guilty and for which he has paid so terrible a forfeit, but we cannot associate his name with odium or contempt, and trust it may live on that side of men's memories over which pity casts a lasting shade, even for the guilty.

The Japanese Government is vastly mistaken if it imagines it can afford to be indifferent to, still more that it can with impunity brave and even outrage European and American opinion as it is now doing in its administration of the Press-laws. It must not imagine that because the foreign Press of the open ports is not perpetually referring to this matter that it disregards the sentences passed week by week, almost day by day, upon the proprietors or editors of the journals of the capital. The conduct of the Government in this respect is producing a deep-seated feeling of indignation, and we had almost said disgust, which is gradually alienating from it thoughtful and impartial men who would willingly and actively sympathize with it. It shames its supporters and sympathizers. They were willing to find reasons for the institution of the Press-laws—reasons which their judgment and conscience fully approved, distasteful as such laws were to them, and they upheld the Government in a course against which the very instincts of their race rebelled, because they saw plainly that the freedom which was to them as the very breath of life was as yet not possible in this country. But they hoped—somewhat against hope perhaps—that those laws would be administered in the spirit in which they are for the most part administered in Europe, and never dreamed of the tyranny which is now being displayed towards the public writers. Take, for instance, a case which has been reported this week. The editors of the *Akebono Shimbun* and the *Yomiuri Shimbun* have been sentenced to three months imprisonment and a fine of 20 *yen* each for having published a statement that Kido had memorialized the Throne in favour of the execution of Mayebara. The statement was untrue, but it may have been made in all good faith. But even supposing that it was not, what then? The statement was publicly denied by Kido within forty-eight hours, and what further was required? The public accepted the denial, and the two newspapers were so much the worse for it that the trustworthiness of their statements was so far invalidated—the proper, as it should have been the only, punishment. But, instead of this, a prosecution is ordered, with the result given above, and it is not easy to find words too harsh in which to characterize so monstrous an act of despotism. The two editors were held to have been guilty of infringing the articles I and IV of the Law of Libel. The first of these runs as follows:—

ARTICLE I.—Any statement, whether it be intrinsically true or false, which tends to injure the character of the individual is a *zangen** and that which tends to give him a bad reputation is *soshiri*.† Whosoever shall exhibit, sell or paste up books, manuscripts, pictures or likenesses for the purpose of disseminating *zangen* or *soshiri* will be punished in the manner hereafter described.

The second is as follows

ART. 4.—Should the effect of the slander be to bring into contempt any official, the punishment to the offender shall be not less than ten days imprisonment nor more than two years; or a fine not less than ten *yen* nor exceeding five hundred; the offence of *soshiri* being punishable with imprisonment for not less than five days and not more than one year, or with a fine of not less than five nor exceeding three hundred *yen*.

Now the idea underlying the judgment is, of course, that the statement made by the two newspapers has a tendency to injure the character of the official in question,

* *Zangen* is a libel which may or may not be susceptible of proof.
† *Soshiri*, a libel which is substantially true.

whom we all know—we say this in no desire to pay a vain compliment—is one of the best, and most trustworthy, and trusted men in Japan. But in what conceiveable way does it injure or tend to injure his character? Was Mayebara his friend? Kido may still have felt, as all public men should feel, that the claim of duty ranked before the claim of friendship. The question to his mind may have lain between his Sovereign and country on one side and his friendship on the other. The choice may have been—always is—very hard, but the more truly he is a trustworthy man of the mould in which a statesman ought to be cast, the more certainly and heavily in a case of this kind would the former claim weigh with him. Was Mayebara his enemy? Kido's character is surely strong enough to bear, until his denial could reach the public, the imputation, if indeed it was levelled at him, that he was counselling a harsh course from personal motives. Was not his denial sufficient? What a victory this is of the law over the press! How inexpressibly derogatory to to its dignity, to the calmness it should exhibit, the majesty which should be its chief characteristic! Incidents of this kind are the true exponents of the spirit in which laws are administered, and if the Japanese imagine that the culpable levity of Sir Charles Dilke on the subject of extra-territoriality jurisdiction will find any counterpart in the decisions of responsible ministers here or responsible statesmen at home, so long as cases of this kind are reported, or the recollection of them lives in men's minds, they are grievously in error. Bad as some of the press prosecutions have been, we have had nothing yet so bad as this—nothing so disheartening to the friends of the Japanese, so dishonouring to the Government, so crushing to the legitimate hopes of the liberal party among the people. One turns away from such a decision sick at heart, and with the feeling that a strong desire to do justice to the Government on the question of its Press-laws has been misinterpreted and wrested into a presumed support for an act or series of acts of cowardly and miserable despotism.

The case of Mr. Hokiyama, the editor of the *Nichi Nichi Shimbun*, is quite as bad as that just referred to. He was sentenced to three months imprisonment and appealed to the *Daishin-In* against the decision. The following extract from a translation published in our issue of the 14th October will give the further history of the case.

Mr. Hokiyama, the former editor of the *Nichi Nichi Shimbun*, was sentenced by the *Saibansho* to three months imprisonment. But while in prison, he appealed to the *Daishin-In*, and in default of any judgment arriving from that body previous to the expiration of the term, he was released from prison by the *Saibansho* and placed temporarily in charge of his relatives to await the decision of the *Daishin-In*. A few days afterwards this decision was given, and confirmed the judgment of the *Saibansho*, and, on the strength of this, Mr. Hokiyama was compelled to undergo three more months of imprisonment. Is not this suffering twice the penalty awarded by the first Court!

A Mr. Sasashima wrote a letter to the *Tekka Shimbun* which was published by its editor, Mr. Ariyoshi, commenting, and of course adversely, upon this iniquitous sentence. For this, the editor and his correspondent were brought into Court, and the former was sentenced to ten months imprisonment and a fine of eighty *yen*, and the latter to three months imprisonment!

Intelligence has reached us of the arrival of the Empress at Kiôto on the 4th inst., where she was received with the utmost demonstrations of loyalty and affection, the people from the surrounding districts having flocked in large numbers to the old capital to welcome her. Extra trains had been put on the line between Osaka and Kiôto, but they did not afford sufficient accommodation, and large numbers of all classes were disappointed of their intended holiday.

We have been requested to state that with the view of practically testing the feeling of the community on the subject of lighting the streets by gas, a paper will be sent round giving particulars of the revised assessment of property and the amount it is proposed to charge each householder, and to which rate individual assent is requested. If it appears subsequently that there is a prospect of a sufficient sum forthcoming to cover the cost of lighting, a final agreement will then be circulated for signature. It is estimated that if every householder pays, as he certainly should, a fair *pro rata* contribution, the amount required from each will not be excessive or such as anyone could reasonably object to pay. But to attain this desirable result the subscription list should be signed by every householder without exception.

We hear on good authority that it is not true, as has been stated, that foreigners residing in Tôkiô outside the concession have been ordered to take up their residence within three days, inside the concession limits. Nor do we imagine that the Japanese Government would do so impolitic an act as this reported order would imply. The appeal from Green Van Buren's late judgement has yet to be heard elsewhere, and there is no object in disturbing the *status quo* until the result of this is known.

The following particulars of the method followed in the United States for the election of a President, which we have taken from Lanman's "Biographical Annals of the United States," may be of interest to our readers at the present political crisis, especially as the actual course pursued is not only generally unknown to those who are not citizens of the republic, but is even not fully understood by all Americans.

The Electors meet in each state capital on the first Wednesday of December and vote by distinct ballot for President and Vice-President, one of whom shall not be an inhabitant of the same state with themselves.

They make lists of the number of votes given, and of the persons voted for, which they transmit sealed, by a special messenger to the President of the Senate at Washington.

The Senate and House of Representatives, having met in convention on a day fixed, the President of the Senate opens all the certificates, and the votes are counted.

The person having the greatest number of the votes is elected, if such a number be a majority of the whole number of electors appointed. If no person have such a majority, then from the persons having the highest number, not exceeding three, in the list of those voted for as President, the House of Representatives shall choose immediately, and by ballot, the President. If the House of Representatives shall not choose the President whenever the right of choice devolves upon them, before the 4th of March next following, then the Vice-President shall act as President as in the case of the death or other constitutional disability of the President.

Should the offices of President and Vice-President both be vacant, it then becomes the duty of the Secretary of State to communicate information thereof to the executive of each State and to cause the same to be published in at least one newspaper in every State, giving two months' previous notice that a President shall be chosen or appointed in the several States within thirty-four days next preceding the first Wednesday in December ensuing, when the choice of President must proceed as usual.

Thomas Jefferson was elected by the House of Representatives. Thomas Jefferson and Aaron Burr having each received 73 of the 128 electoral votes cast, the choice devolved upon the House of Representatives between Jefferson and Burr. They voted to commence balloting on Wednesday, the 11th day of February, to attend to no other business while the election was pending, and not to adjourn until a choice was effected. Seats were provided upon the floor for the President and the senate, but during the act of balloting the galleries were cleared of spectators, and the doors were closed. The balloting was continued, and the House remained in session nommally without adjournment, for seven days, during which 104 members were present. Some of them were so infirm or indisposed that it was necessary to provide beds for them, and one member, who was very ill, was attended by his wife. On the 36th ballot, which was taken on the afternoon of the seventeenth day, Thomas Jefferson was elected President, the Vice-Presidency devolving, of course, upon Aaron Burr.

A private telegram has been received by a firm here from London, the 7th instant, announcing that the imposition of a duty on tea in the United States is not contemplated.

From the "Japan Mail Daily Advertiser."

Monday, 4

A scratch foot-ball match was played at the Cricket ground on Saturday, which resulted, after some good play, in a victory for A. H. Dare's side by three goals and one touch down against two touches down for their opponents. A. H. Dare himself kicked the three goals.

The M.M. Co.'s steamer *Iravaddy*, with the outward French Mails, was to leave Singapore on the 22nd Nov.

ber, and the O. S. S. Co.'s steamer *Deucalion* on the 23rd ultimo, at daylight.

We have been informed by the Agent of the Great Northern Telegraph Company that the cable between Singapore and Batavia has been repaired, and consequently all lines are now in good working order.

We learn from the *Hôchi Shimbun* that the Government has sent H. E. the Austrian Minister a present of some furniture to supply the place of that lost by him in the late fire The same paper also reports that wages for carpenters and plasterers have risen 40 per cent, on account of the great demand that now exists for their services in rebuilding the burnt out district, and also that the price of timber has risen 30 per cent.

From the *Chôya Shimbun.*

NOTIFICATION No. 148.

It has already been made public by Notification No. 143, that His Majesty the Mikado would proceed to Kiôto this winter. The date of His Majesty's departure from the capital has now been fixed for the 14th of January, 1877.

SANJÔ SANEYOSHI,
Daijô Daijin.

1st December, 1876.

From the same.

NOTIFICATION No. 149.

It is hereby made known that vessels will be permitted to trade between Japan and the Island of Sagahlien, now Russian territory, in the same way as the coast trade is carried on. That is, vessels will be permitted to enter and clear free of port dues, and carry goods duty free, but full particulars of the same must be given to the Custom House at the port of entrance and clearance, in accordance with Notification No. 163 of 1875, and No. 29 of 1876.

All vessels trading to Sagahlien must enter and clear at one of the ports open to foreign trade.

SANJÔ SANEYOSHI,
Daijô Daijin.

1st December, 1876.

From the same.

Mr. Akidzuki, a *Gikwan* of the *Genrô-In*, has given 100 *koku* of rice to the sufferers by the late fire, and many merchants, also, have already subscribed a large amount of money for their relief.

From the *Nichi Nichi Shimbun.*

A third National Bank will be established at Kobuna-chô, Tôkiô.

From the *Akebono Shimbun.*

A fire broke out at Honshirokane-chô, Tôkiô, at 3. a.m., on the 2nd instant, and destroyed 220 houses.

From the *Osaka Nippô.*

A steamer, heavily laden, left this port for Wakayama, and while lying in the harbour of the latter place took fire. Both vessel and cargo were entirely destroyed.

Tuesday, 5th.

Some few gentlemen interested in sport and the proper preservation of game in Japan, have taken the trouble at various times of importing pheasants from China, which they put down in different localities near here. The foreign birds seem to have thrived and bred freely, and the cross with the native pheasants appears to have done remarkably well, as the following weights of four cock pheasants of different kinds, all of which were shot in the neighbourhood within the last few days, will show.

Japanese copper pheasant.....	2 lbs.	10½ oz.
„ green pheasant.....	2 „	9 „
Shanghai pheasant.....	2 „	8½ „
Cross between Shanghai and Japanese green pheasant	2 „	15 „

This shows that the cross produces a finer bird than the native, and if all those sportsmen who are able to do so would follow the good example which has been set them by the few referred to above, and import China pheasants, the birds here would not only be desirably increased, but much improved both in size and appearance.

We suppose that the *Charles L. Pearson* must have tried a short cut overland when nearing the Cape on her voyage out here, with the view of bringing the latest news of the Kaffir war, if, as reported in the *Herald*, she passed the meridian of the Cape in 30 degrees south, or about 250 miles north of Cape Town.

From the *Nichi Nichi Shimbun.*

The amount taken at the Yokohama Custom House on account of duties during the month of October was somewhat over *yen* 143,000, and during the month of November amounted to *yen* 130,120.87.

From the same.

The Tôkiô *Fu* has ordered that the reconstruction of those houses which were destroyed by the late fire must be deferred for some time, as the streets of the burnt out district are to be laid out in an improved manner.

From the same.

Another building within the Tôkiô *Fuchô* has been provided for those who were rendered homeless by the late fire and have need of assistance.

From the same.

A Dutch medical man has been employed by the Kagoshima *Kencho*, and a hospital has been established there under his superintendence.

From the *Akebono Shimbun.*

On the first of this month the Railway between Tôkiô and Yokohama was handed over to the *kuadzoku* who have purchased it from the Government. The Japanese employés will be retained as hitherto, but a gradual decrease is to be made in the foreign staff.

From the same.

The foreign teachers of the Girls' School at Takebashi, Tôkiô, were entertained by the officials of the Educational Department on the 2nd instant.

From the *Hôchi Shimbun.*

Messrs. Saigo, Tanaka and others who were appointed by the Japanese Government as Commissioners to the Philadelphia Exhibition, left San Francisco on their return to this country on the 1st instant.

From the same.

Tokugawa Akitake, (better known as Prince Mimbu-tayu, the younger brother of the late Shôgun) who is now at Philadelphia, has been ordered to proceed to France to complete his education. The *Kunaisho* (Department of Imperial Household) has granted him $1,000 per annum to defray his expenses.

Wednesday, 6th.

We learn from the *Nichi Nichi Shimbun* that telegraphic advices from Yamaguchi report that Mayebara, Okudaira, Yokoyama, Yamada, Saze, Kokura and Arifuku had been decapitated. Forty-seven other insurgents had been sentenced to imprisonment with hard labour; fourteen had been deprived of their rank of *shizoku*, and eight other accused had been set free.

A telegram was also received from Kumamoto at 8 a.m. on the 4th instant, which announced that all the captured insurgents there had been tried and sentenced. Ura, Kôdzu and Yoshimura had been condemned to death, and forty-seven others to various sentences of imprisonment with hard labour, while eight had been acquitted.

Another message from Fukuoka reports that of the Akidzuki insurgents Imamura and Aida have been sentenced to suffer to extreme penalty of the law; one hundred and forty others to different terms of imprisonment with hard labour, but that two hundred and thirty had been altogether acquitted.

It is stated by the *Hôchi Shimbun* that those insurgents who have been sentenced to hard labour will probably be sent to Yezo.

From the *Nichi Nichi Shimbun.*

News has been received from Ibaragi *ken* (Mito) that the farmers there, in number about 5,000, are creating a disbance on account of the taxes.

From the same.

A newspaper called the *Tôkiô Shinpô*, which has not been issued for some time past, is about to renew its publication under the superintendence of Mr. Nakamura.

From the same.

The *kuadzoku* Date has given 100 *yen* to the sufferers by the late fire.

From the same.

The police constables who were sent to Kumamoto and Yamaguchi returned on the 4th instant by the *Tôkai Maru.*

From the *Akébono Shimbun.*

An Italian in the employ of the Paper Money Department has given 100 *yen* to the sufferers by the late fire.

From the *Mainichi Shimbun.*

Mr. Godai's indigo factory has not proved a success, as a loss of about 150,000 *yen* has been incurred through a failure to produce indigo of a good marketable quality.

Thursday, 7th.

The barque *Mary Fraser*, which was on shore in the Inland Sea, has been got off safely, and was lying at anchor in Kobe harbour when the *Tokio Maru* left, apparently not much injured.

From telegraphic advices received from Yamaguchi it would appear that Mayebara suffered the extreme penalty of the law on the 3rd instant.

The U. S. Consul-General yesterday morning fined a *Tennessee* sailor named William Sutton, $2, and further 50 cents for *jinrikisha* hire. Sutton had been found lying in the street drunk and incapable, and was taken to the station by the *jinrikisha* coolie.

James Grundy, who was last week ordered by the Acting Law Secretary, Mr. Wilkinson, to pay John Brown $10 as a monthly instalment of the judgment given against him for $60 some time ago, yesterday informed the court that this instalment for December had been paid.

From the *Hôchi Shimbun.*

The *Nichi Nichi Shimbun's* proprietors have, we hear, purchased from the *Okurasho* for 15,000 *yen* the building of the late Yebisuya, in Owari-chô, Tôkiô, to which place its office will be removed during this year.

From the same.

The disturbance among the farmers in Ibaragi *ken* does not seem to have been of a serious nature, as they showed a disposition to quietly disperse when the officials remonstrated with them and explained what the Government required of them.

From the *Nichi Nichi Shimbun.*

In June next year His Majesty the Mikado will visit the north-western provinces, such Yechigo, Kaga, etc.

From the same.

Shimadzu Tadayoshi, the chief of the House of Satsuma, will return to Kagoshima shortly on account of ill health.

From the same.

From the 4th to the 6th instant extra trains were run on the Kiôto and Osaka line on account of the visit of Her Majesty the Empress.

From the *Akébono Shimbun.*

Mr. Isaka, the editor of the *Futsu Shimbun*, published at Tokushima in the province of Awa, was recently summoned to the *Kencho* and examined concerning a certain article which he had published, and was remanded in charge of the ward officials.

From the same.

When the special court was first opened for the trial of the captured insurgents at Hagi, they could not then be induced to reveal anything, and it was only after they heard that Nagaoka and others had been arrested at Tôkiô that they made a full confession of their whole plot and proceedings. Okudaira, up to the time of his death, denounced the present Government officials in the strongest terms On being led out for execution Saze told those who were present that when his family heard of the death of Mayebara they refrained from all food, and would continue in that course.

From the *Osaka Nippô.*

A Branch office of the Kobe Custom House is to be established at Kagoshima.

Friday, 8th.

The *Nichi Nichi Shimbun* gives us some particulars of the riots in Ibaragi *ken.* It appears that the farmers from various parts of the *ken* assembled together on the 26th ultimo, to discuss the question of the land tax. As they showed some disposition to create a disturbance the Governor had the ringleader arrested, when the others dispersed. However, on the 1st instant they again met together at the town of Makabe-machi, in number about five hundred, became unruly in their proceedings, and finally killed an official there named Ishikawa. The Governor, on hearing of this, attempted personally to quell the riot, but without success, and was eventually obliged to call together a number of *samurai* to assist him, as his own life and the safety of the place was in danger. Subsequently troops were applied for and sent to the scene of the disturbance from the Utsunomiya garrison, but on hearing of their approach on the 3rd instant the riotors fled to Tsukuba-yama. Although no official intelligence has yet been received of the complete suppression of the outbreak, no great difficulty in restoring tranquillity is apprehended.

F. Region, another of the *Tennessee* crew, was brought before General Van Buren yesterday morning charged with being drunk and incapable. He was fined $2.30.

From the *Chôya Shimbun.*

The Bureau of Agriculture is about to employ fifty girls in the silk filature factory at Yotsuya, Tôkiô.

From the same.

We hear that all the officials of the *Chokuninkʻuan* (those appointed directly by the Mikado) and *Sôninkʻuan* (those appointed by the *Daijôkʻuan*), that is all from the first to the seventh rank, have proposed to give up a month's salary to the sufferers by the late fire.

From the *Hôchi Shimbun.*

The Government Paper Mills at Oji, Tôkiô, are progressing favourably and now produce 70 reams of paper per day.

From the *Akébono Shimbun.*

We hear that some disturance has arisen in Gumba *ken* (Kôtzuke.)

From the *Nichi Nichi Shimbun.*

Mr. Itô, the Minister of Public Works, will accompany His Majesty the Mikado to Kiôto next January.

From the same.

We hear that about a million silk-worms' egg cards have been exported to foreign countries this year, and about 200,000 still remain at Yokohama unsold, while 1809 egg card merchants visited Yokohama from various parts of the country this year.

Saturday, 9th.

From the *Hôchi Shimbun.*

NOTIFICATION 143 A.

It is hereby made known that newspapers or magazines which do not publish their first number within thirty days from the date of their receiving their license, or those newspapers or magazines which have reported that they will discontinue their publication for a certain time and fail to republish their issues within 50 days from the time of such discontinuance, will be deprived of all right conferred by their license, and their further publication will be suspended. Those newspapers or magazines, the publication of which is at present temporarily discontinued, are

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ordered to make the same known to the *Naimusho* through the various *Kuchō* within twenty days from the date of the official receipt of this Notification, on pain of immediate suspension.

OKUBO TOSHIMICHI,
Minister of Home Affairs.

4th December, 1876.

From the same.

On the 17th November Mr. Sayeshima left Shanghai, where he had been staying at a Japanese hotel, for a trip into the interior of China, being accompanied by a Chinese official.

From the same.

We hear that the respective legal advisers of Mr. Goto and the *Horaisha* attended the *Saibansho* on the 7th inst., where they had a long discussion, presumably about claims of the latter on Mr. Goto.

From the *Nishi Nihon Shimbun*.

Shimadzu, a *shizoku* of Ishikawa *ken*, left the capital on the 18th October at the instigation of Maebara, with the intention of joining in the Kumamoto rebellion, but found on his arrival at that place that the outbreak had been precipitated in its action and that the Imperial troops had already overcome the insurgents. Baffled at Kumamoto he then proceeded to Hagi, where he again found himself too late, and eventually returned to Tōkiō on the 27th of last month, where after some days hiding he found further concealment impossible, and therefore gave himself up to the police.

From the same.

A man with a drawn sword entered the house of Mr. Sato, the Governor of Shimane *ken* (Chishō), on the 25th of November. As Mr. Sato was luckily absent the intruder retired without doing any harm.

From the same.

The police constables who were sent to Kumamoto returned on the 7th instant by the *Tōsei Maru*.

From the *Chūgai Shimbun*.

All the cattle belonging to the Department of Agriculture (*Kangyōrio*) now kept at Yotsuya, Tōkiō, are to be sent in a few days to a branch establishment of the Department at Komaba, near Shinagawa.

From the *Akebono Shimbun*.

At 1.10 a.m., yesterday, the 8th instant, a fire broke out at Kurumazakacho, Tōkiō, by which fortunately only ten houses were destroyed.

Some short time ago the *Akebono Shimbun* published a statement that Kido and other Chōshiu Government officials had presented a memorial to the throne praying that Maebara should be executed for his treason and not pardoned. Kido publicly denied having presented any such memorial, which any reasonable person would have deemed to be all that was required by the case. The Government, however, has pushed the matter much further. The unfortunate editor of the *Akebono*, Mr. Nakashima, has been summoned and tried for a violation of the 1st and 4th articles of the Libel-laws, has been found guilty and sentenced to three month's imprisonment and a fine of 20 *yen*. Mr. Nagai, the editor of the *Yamato Shimbun*, has had a similarly severe sentence passed on him for republishing the same item of news.

THE TOKIO *FU* v. J. M. BATCHELDER.

STRIPPED of all side issues, the question on which the U. S. CONSUL-GENERAL delivered judgment on the 2nd instant in the above case, resolves itself into this: Is a document so solemn as a lease to be interpreted according to its terms—terms upon which there can be no dispute—or according to some implied understanding, of which no word can be found in it, existing in the mind of either the lessor or lessee when it was made? If we are right in this view of the true issue, General VAN BUREN's decision is an absolute defiance of all sound law, nor do we see what legal instrument could retain the smallest value or binding power if such a decision is upheld. The defendant in this case became the purchaser of certain lots of land in the foreign concession of Tōkiō, set apart for that purpose by the Japanese Government in accordance with the conventions of 1867 and 1870. He paid a certain sum for them and one year's ground rent in advance, agreeably to the conditions on which the land was granted by the Government. But since that time he has refused to pay the stipulated ground-rent, on the plea that the conditions on which he held his land have been violated by the Japanese Government, which has permitted foreigners to reside outside the limits of the foreign concession, and thus reduced practically to nothing the value of property which was purchased on the faith that no such permission would be given. He further pleaded that he had spent considerable sums of money in erecting buildings on his land, but that the leasehold value of these had been greatly prejudiced by the aforesaid act of the Government, and demanded not only the remission of his ground-rents, but $10,000 as compensation for the injury inflicted on him by the breach of faith of which he complained.

It is therefore necessary to enquire whether the lease or leases issued to him for this land contain any covenant which justified the expectations he had formed, or his refusal to pay the stipulated ground-rents. And we find nothing of the kind. The leases simply acknowledge the lesseeship in perpetuity of the properties allotted, name the amount payable for them as ground-rent, provide for a police-rate, for power and limit of transfer to any other purchaser, and for the recovery by the lessors of the ground-rents in case they are not duly paid.

Nor can it be without astonishment that any reader of General VAN BUREN's judgment observes that throughout the whole of it not one word of reference is made to the lease—the only document which forms a certain guide to the mutual obligations of the lessor and lessee. Instead of this, very full references were made to the conventions under which the land was granted, but which nowhere define the relations which were subsequently to exist between the Government as landlords and the foreigners as tenants. We contend that the simple issues of the case which General VAN BUREN had to decide were these: Has the lessee complied with the terms of his lease? And, if not, has the lessor so violated his obligations towards him that he (the lessee) is justified in the non-compliance complained of? If we are correct in regarding these as the true issues of the case, the U. S. CONSUL-GENERAL's judgment will not hold water for a single instant.

Thus much for the case itself. But it seems to us eminently one in which equity should come in and redress the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

obvious and grievous hardship inflicted by law. Not indeed that the deterioration of the defendant's property for which he sought compensation can be justly held to be wholly due to the acts of the Government. It is due to many causes which have similarly reduced the value of real property here. But it is certain that the permission granted to foreigners to reside outside the limits of the concession has, as a matter of fact, greatly prejudiced the value of land within those limits, and though that permission has never been formally given, the liberty so freely made use of, with the cognizance and connivance of the authorities, is answerable for that prejudice done to the defendant's property which he conceived to justify him in withholding his ground-rents and claiming compensation.

The truth is that the case ought never to have come into court. It was one for diplomatic adjustment by the Ministers of the Treaty Powers with the MINISTER for FOREIGN AFFAIRS; and had not the Foreign Affairs of this country been under the malign influence of the crapulous dotard who left for Rochester in August last, and the congenial crew with whom he tippled, it never would have come into court. Over and over again have overtures been made to bring about an equitable settlement of the case. The land-renters proposed terms which were moderate and fair, waiving all claim to compensation for losses which, in some sense, the action of the Japanese had entailed on them, and contending only for a reduction of ground-rents which had become unendurable in view of the miserably depreciated condition of their property. But it takes time to disinfect a public office from the noxious influence of men like Mr. PESHINE SMITH, and the consequence is that though a most propitious occasion presented itself not many months back for settling the case amicably and equitably, the old spirit so clung to the Department that the moment was lost. No wholesome doctrine can live so long as the lingering demon of this driveller remains unexorcised. Nothing can be hoped for in or for Japan so long as the quirks and quibbles and florid ignorance of those who thrive on Japanese credulity, are permitted to usurp the place of liberality, justice and good sense.

We have expressed our dissent from General VAN BUREN's judgment with some diffidence, for his decisions generally have been accepted with much respect and confidence by the public. We are sensible, too, that laymen contend with lawyers in legal questions at a grave disadvantage. But if we do not err very greatly, this judgment is not only one which must be instantly reversed on appeal, but it will have a most mischievous effect upon the Japanese mind, tending, as it must, to weaken their confidence in our sense of the binding nature of solemn documents, and even, however erroneously, in the administration of justice in our courts. We shall rejoice to find that our misgivings in these respects are unfounded.

The Viceroy of Chihli is sending rice and money to some out-of-the-way districts off the main roads; but already the misery is great and much more general than was at first supposed. One sign of it is the daily sales of donkeys, mules, bullocks, women, girls, and children. The other day, we are informed, a man sold his wife, aged 21, and two girls aged respectively 15 and 16, for 9,000 cash. This kind of thing is of daily occurrence.—*Shanghai Courier.*

SPIRIT OF THE JAPANESE PRESS.

THE END OF THE INSURRECTION.

("*Nichi Nichi Shimbun*" 6th December.)

We stated yesterday that the insurgents of Kumamoto, Akizuki and Hagi had met with their punishment on the 3rd inst. Three of the former were beheaded, forty-seven sentenced to hard labour, and eight acquitted. Of the next, two were beheaded, one hundred and forty sentenced to hard labour, and two hundred and thirty acquitted. Of the third, seven, including Mayebara, were beheaded, forty-seven condemned to hard labour, fourteen deprived of their rank, and eight acquitted. And thus ends the southern rebellion.

We have already in previous issues stated where public opinion seemed to rest in regard to the punishment of these traitors, and urged that the action of the Government towards them should neither be too severe nor too mild, but should conform justly to the laws of the nation. We expressed the hope that capital punishment would not be awarded in any case where guilt was not fully proved, and since the above details reached us we have been fully persuaded that the Government has appreciated this view and has employed no undue severity.

When the Saga insurgents were punished on the 13th April 1873, the heads of two of the leaders were exposed and ten others were beheaded (without this additional penalty). But it was said even then that this was too mild a course, and some may now say that the insurgents have been too leniently dealt with in the present case. It seems to us, however, that such men neither understand what justice nor what treason is.

Again, on the other hand, some may maintain that treason should not be punished capitally, as it is not so punished in Europe,* and they may be so much influenced by European ideas as to say that the punishments inflicted on these men are altogether too severe. Such men may be acquainted with the *Code Napoleon*, but they are ignorant of Japanese law, and though they may know much of the history of England and America, they are utterly ignorant of the state of their own country. Moreover, they do not know the conditions on which peace can be preserved here. The opinions held by these two classes of men are so extreme that there is no need for the Government to pay any attention to them, as they do not in any way disturb the opinion of the public generally. Any one who fairly understands the actual condition of the country must acknowledge that the punishments inflicted on these men are just and proper.

No man, however, of good feeling should hate another for crimes committed by these men. Punishment has been inflicted on them and their heads have been severed from their bodies; but though their crimes will remain as an indelible blot on the history of the country, it cannot be unjust to pity these unfortunate persons. When they rose in rebellion, we denounced their course of action—much against our will, and urged them only by one desire for the national good. A sense of necessity impelled us at that time, and we have no desire again to enumerate their crimes. Among them were some of the highest class men of Japan, who well knew right from wrong, and who had no desire to bring misery on their country. At the time of the Revolution they espoused the Imperial cause and made great struggles for it, nor in rising in rebellion did they imagine that their names would be left as blots upon their nation's history. Moreover, they had proved by past actions that they feared not to risk their lives for their country's good. Yet, in the heat of excitement they permitted discontent to rule their minds and—widely different from their expectations—have left their names as blots upon our history to their everlasting shame.

We trust our readers will recognize the justice of this punishment, and, while detesting their crimes, will deplore their fate.

MAYEBARA.

("*Bunmei Shimbun*," 30*th November.*)

There is an old saying among us that the character of no man can be fairly judged until the lid of his coffin has been fastened, and this is for the most part true. But it often happens that men die whom no true estimate can be made until some years after their death.

When a man raises an insurrection, he may at the moment appear to be doing wrong towards his Government and his

* It is not necessary to inform European readers that this is the opinion of the writer's, though the utmost possible leniency is always displayed.—[ED. *J.W.M.*]

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

country, but cases are not unfrequent where posterity reverses this decision.

As we have all heard and know, Mayebara, not approving the course of the present Government, rose against the Imperial forces in the Yamaguchi *ken* and was defeated and captured, and many days will not elapse before capital punishment will have been visited upon him. Let us imagine the lid of his coffin closed and pronounce a judgment upon his character.

The Press has been unanimous in depicting Mayebara as a reckless man without talent or learning, and so incapable of appreciating the course of the present administration that he raised the standard of insurrection. Through this recklessness of character, it is said, he has not only effaced the honour once attached to his name, but that his memory will be for ever a blot upon our national history.

As our Government is composed of wise officials united under our virtuous Emperor, its administration of our affairs is undoubtedly perfect, and what the newspapers concur in must undoubtedly be true. At the same time it is impossible to say whether in days to come Mayebara will be regarded as a rebel or a martyr in a great cause.

It is reported that when Mayebara quitted office he said to some one:—"In the present Government there are young men who "have never fought a battle, and who possess but a few outlines "of foreign ideas, and, should these men remain in office, will our "military prowess increase, will the morals of the nation improve, "and will the people be satisfied with them? I do not wish "my name to be associated with those who are bringing about the "demoralization of this nation, and therefore purpose to leave the "Government and make my own plans for the future." With these words he quitted office, and though several attempts were made to induce him to recall his decision, he steadily refused to do so.

Mayebara is now like a bird in a cage, and while at the very point of death he is ridiculed by all. But just consider for a moment. Is the country strong and wealthy; are the morals of the people good; are men satisfied with the present Government? The people are in a position to answer, and they will undoubtedly do so in the affirmative.*

The Shinshiu Sect of Buddhists.

(Nichi Nichi Shimbun, 4th December.)

On the 28th November last His Majesty the Mikado was graciously pleased to confer a title of great honour* on Shinran Shonin, the founder of the Shinshiu Sect of Buddhists, and two high priests of the East and West Hongwanji respectively went to the *Shikibucho* (Bureau of Ceremonies attached to the Household Department) and received it. The Prime Minister has since notified it to the East and West Honganji, Senshoji, Kosheji, Bukkoji and Kenshokuji, the head temples of the six branches of this sect.

In our capacity of editor of a newspaper we had the honour to publish the above intelligence some time ago, and desire now to make a few remarks upon this notable event.

It is a joyful thing that His Majesty so well rewards those who labour with indefatigable zeal and have done deeds worthy of honour, by bestowing his gracious favour on them. Since the Restoration many have been rewarded for their noble deeds in past times, while on others posthumous honours have been conferred in order to cast immortal lustre on their names. Shinran Shonin is one of these, and the act above recorded is no mean honour to the sect he founded.

We all know that religion is an important agent in leading men towards virtue. But there are many religions, and these are again divided into sects, and to the believer in the tenets of one of these sects, the tenets of all the others appear false. But looked at through the mind of an impartial unbeliever, this preference for one set of doctrines is simply due to a want of proper consideration given to others, and it is not within the power of man to judge which religion is the true one.

Leaving then the question which is the true religion, let us dwell rather upon the good which this sect has done as a guide to men in the paths of virtue. In this light the honour just conferred upon its founder was well bestowed.

When reading a work called 'Ten Great Religions,'† by Clark, an American writer, we observed that Buddhism is spoken of as the Protestantism of India, and this because Sakya-Muni had taught the doctrine of Self-reliance and showed a means of escape from the spiritual despotism of Brahmanism‡. Clark, too, compares it with the effect of Luther's breaking away from the Church of Rome. The labours of Sakya-Muni and Luther cannot indeed be compared, but both succeeded in the same manner. For our own part we would go a little further, and say that the Shinshiu sect is to Buddhism what Protestantism is to Christianity, and the founder of the sect may be not unfittingly compared with Luther. There can be no question that when the Buddhists came over to Japan in the remote ages, they did an enormous deal of good; but they also did much mischief by political intermeddling, just as the Church of Rome did during the Middle Ages. The Shinshiu sect, however, like Protestantism, has never intermeddled with the affairs of Government.§

When the Romanists came to Asia, they showed a disposition to meddle with political affairs, and hence the suspicion with which they are regarded by all the oriental nations. The Protestants differ from them in this respect and show no such disposition.

We now understand that missionaries of the Shinshiu sect have gone over to Shanghai and are making converts among the people of China. They ask of no help from the government and thus exemplify the chief doctrine of their religion, that of Self-reliance.

We now entreat the priests of the Shinshiu sect to bear well in mind the gracious act of the Emperor towards them, and never to forget the admonitions of their founder. A fresh responsibility has been imposed on these priests, and we trust they will continue to be zealous.

Bail.

("Nichi Nichi Shimbun," 30th November.)

We hear that the *Genrō In* has drawn up a Law of Bail and sent it up for consideration to the *Daijokwan*, and we believe this to be true, and that the *Daijokwan* will accept and enforce it before the lapse of many days. We therefore rejoice with the public over this boon.

As this question of Bail has often been argued by the Press, our readers must be aware that it is a measure protecting the person of the subject.

The Bail law in question is said to consist of twenty-one clauses, and though we have not seen it, we are inclined to believe that it is based on the famous *Habeas Corpus* law of England.

The efficacy of Bail is this:—When either an accused or suspected person is liable to be imprisoned, and before sentence has been pronounced against him by a court, any friend or relative of his has the power, on depositing a certain sum of money as security, and giving a promise that the person shall appear before the court when so required, of taking charge of him until the decision is pronounced, and when this is done the sum deposited is returned to the depositor. If the person so suspected or accused makes his escape the money is held by the court and applied towards the expense of re-arrest. Under these circumstances the sureties not only lose the money paid into court as Bail, but they have to undergo such punishment as the law may direct.

In the application of this law of Bail, certain responsibilities must rest upon the magistrate in case he wrongfully imprisons any man.

Such being the outlines of this law, we think there there is no danger of its not harmonizing with the existing laws of the nation.

Although a man may have been brought before a court and even although his guilt may have been proved, he cannot properly be pronounced guilty until the court has pronounced its sentence, and the theory among the western nations is that a man is held to be innocent until proved to be guilty, and meanwhile he enjoys the rights of all innocent men.

It may be argued, that looking at the matter from a practical point of view, a man should be detained in prison until the court

---

has arrived at its decision. But from a theoretical point of view there is no reason for imprisoning a man who has not been proved guilty. There is no better system than Bail for disposing of these conflicting objections.

The most important point is to settle the amount of Bail which should be accepted. This cannot be settled absolutely in relation to the crime of which the person is accused. It must be left to the discretion of the magistrate. Were it laid down rigidly that a given sum must be demanded in case of a given crime, without regard to the financial circumstances of the prisoner and his proposed surety, the wealthy only would be able to procure bail, and the poor could not enjoy the benefits of the law.

The judge, therefore, in fixing upon the sum demanded, must carefully consider both the gravity of the crime and the circumstances of the accused and his surety. And, as the magistrates will have the power of settling this amount, measures must be devised to prevent their abusing it.

Evils from the abuse of this power took place in England in the reign of William and Mary. Men who bore ill-will against accused persons would prevail on the magistrates to impose such large sums as bail that the sureties were unable to procure the liberation of accused persons. Moreover the magistrates from time to time acted upon their own prejudices or prepossessions and not according to their conscience. If the greatest care be not paid to this point the new law will have no efficacy.

In England and America all accused persons are liberated on bail, and thus, at times, cases occur in which wealthy men arraigned of a capital crime or one punishable by imprisonment for life, connive with their sureties, and the latter, willing to regard the money deposited as so much irrecoverably lost, allow the accused to escape to the detriment and scandal of justice. This fact is adduced by some as an argument against the system.

But, to our mind, such evils are small in comparison with the good which the bail system is calculated to afford, and certainly are not large enough to forbid the passing of this law. But if serious fears exist, and we wish to be very careful at first, it might be well for the present to withhold the privilege from all persons accused of capital crimes or crimes rendering them liable to imprisonment for life.

The Decay of Propriety.

("Chôya Shimbun," 1st December.)

The sentiment of shame exists apparently among very few men in the present day, and virtue is not honoured as it should be. Why is virtue so scantily honoured now-a-day?

This arises from natural causes. Our countrymen very generally wish to change our ancient customs for those of the more civilized nations. And is it wrong that they should wish to do this? Of course not. It is not only right, but is demanded in the interests of the country. The people have begun to perceive that oppression must give way before liberty, and that men should not differ in degree because they differ in birth, that parents must not oppress their children, that men and women are equal, etc, and therefore reforms and improvements must be made in our old customs to satisfy the general desire of the nation. And the fact is that, in order to ensure these results, the nation has lavished all its attention upon education and has forsaken the cultivation of virtue or ceased to care for it. Men have begun to consider their material interests as of paramount importance, and propriety as of only secondary weight, though they still contrive to keep within the boundaries of the national laws. Thus they seem perhaps legally right, but if their conduct is regarded from a moral point of view, it is very improper indeed. For this cause many evils have arisen which are indescribable with the pen, though they are traceable to natural causes. For, as there are more fools than wise, when old customs fall into decay, the majority of men do not know what to do, and while in this state of moral suspense they fall into dissipation and finally lose sight of the obligations of virtue.

How can we remove this evil? Must we resort to religion to purify the hearts of men, or must the Government enact laws to check men in these evil courses?

In our opinion, a perfect remedy can be expected from neither of these courses. It is a question of education: the people are already on the right road and they must pursue it.

There is a natural instinct in every man which teaches him that to strike his father, or to steal, is wrong, and that love and charity are virtues, and it would be very wrong to argue that men are deterred from vicious courses by the fear of future punishment alone. Conscience is the great restraint, and were even religion totally abolished, men would still perceive the difference between good and evil.

And though laws may exist, it is not the mere fear of punishment which prevents men from violating them. Men would know right from wrong even were there no laws. It is Reason which teaches all this, and the only road to Reason is through education. Were we to trust to religion alone as a corrective, people would begin to lean helplessly on God in all things, and we should soon be an assemblage of poor helpless fools. Were we to trust solely to the efficacy of laws, the people would be continually seeking to evade them and the nation would soon end in becoming a race of liars. No; the work must be done by Reason. Let us not be misunderstood. We do not mean to say that laws and religion are useless. The former are matters of prime necessity, and the latter does more good than harm—or, at all events, its existence does not obstruct the progress of the nation to any serious extent, while it undoubtedly does some good. Our object in speaking as we have done is to prove that it is Reason to which man is indebted for a knowledge of the distinction between good and evil. But in trying to promote education we have fallen away in the sense of propriety.

Now, the doctrines of Confucius are not perfect in every respect, but they must not be regarded as worthless. And in like manner European science is not merely confined to natural philosophy. It equally treats of the purification of the heart and of the honour due to virtue.

On reading this some may laugh, and say that what we have written is devoid of reason. But we think we have said enough to show that the morals of our countrymen have become degraded, and to point out the manner in which they can again be purified. If men will give attention to this, all will be clear to them. And, be it observed, this is not written for those who cannot see their way through it even with the advantage of second thoughts.

Correspondence.

THE TESTAMENT OF IYEYASU.

To the Editor of the "Japan Weekly Mail."

Yokohama, 6th December, 1876.

Dear Sir,—In the *Japan Herald* of yesterday I observe the following letter.

To the Editor of the *Japan Daily Herald*.

Dear Sir,—I shall be obliged by your again granting me the medium of your columns to reply to the *Japan Weekly Mail's* reviewer.

1.—My translation of the Legacy of Iyeyas' was not made from the copy used by Dr W. Dickson, nor from that deposited by my correspondent at the office of the *Mail*. I do not doubt his word as to the existence in the latter copy of the title *yui-jô*, and I have therefore no desire to inspect the version he has so placed at my disposal. As I write a friend is good enough to bring me another copy of the document in question in which the word *yui-jô* does not occur.

2.—*Yui-jô* and *yuisho* bear almost exactly the same signification, and to use them synonymously as I have was not so great a blunder as is, strictly speaking, that of my critic in his indiscriminate use of the words *will* and *testament*. That which I stated of the one is equally true of the other; it is not fully naturalized. That the meanings of *jô* and *sho* are identical, when coupled with *yui*, may be ascertained by a reference to Morrison's Dictionary under titles *Chuang* and *Shoo*.

3.—With regard to the word *yuisho* there is no doubt that Mr Satow has made the assertion I attributed to him. I quote—"† Testament, n, *yuisho* (c); Old——, *Kingaku-Zensho* (c)." The † is explained by the authors to mean "word not fully naturalized." Hepburn also bears testimony upon this point; he says that in Japan it is not customary to make a written will; and he consequently gives only the word for what we call a nuncupative will, viz., *yui-gon* or *yui-gon*, which he translates "the verbal will, or last directions of a dying person," and "*yui-kun*, the dying instructions or exhortations, as of a parent or teacher." Had *yuisho* and *yui jô* been fully naturalized, they would probably have appeared in Hepburn's dictionary.

4.—My critic assumes that Mr Satow's restrictive mark has or may have exclusive reference to the *zensho*. Were it so, the mark would have been confined to that word, and not set before the whole title. That assumption is so far-fetched as materially to weaken, in my opinion, the credit that might otherwise be reposed in my correspondent's honesty of purpose in the assault he has made upon me.

5.—I think I have said enough to justify my use of the word *yui-jô* as identical in meaning with *yuisho*; and as for the correctness or otherwise of the evidential value I have attached to the sense of the latter, as given by the lexicographers, I am content to leave it to those of the public who take a critical interest in this controversy. My critic would imply that *yui-jô*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

is a word confined to the spoken language; I assert that it belongs equally to the written.

6.—The appositeness of the argument he draws from the titles Old and New Testament I again question. The word testament is there used in a figurative sense. My critic must know as well as I do that the Old Testament was not written in Greek, and his lexicon will inform him that the word "testament" is not the primary signification of [illegible], taken alone, while "covenant" is. The Hebrew word signifying covenant was translated [illegible] by the word testament is not in the slightest strained sense. I repeat, therefore, that the translators have not, doubtless for sufficiently good reasons, given a strict translation of the original title of the Scriptures, as different, but have substituted the word testament, using it figuratively. It will thus be seen that my critic has hastily made two assertions which are untenable:—first, that the Greek word [illegible] was the original title of the Scriptures; and secondly, that [illegible] is a secondary meaning of that word.

7.—His next position is that he proves by reference to the evidence he has himself adduced that the correct form of the title [illegible] in the original is not that stated by me, rather than my statement to the contrary. In all [illegible] has its limits; and though I have [illegible] this controversy with a modest [illegible] and warmly deserved, I must now take the liberty of reminding him that questions involving a matter of personal veracity in an opponent are not [illegible]

8.—[illegible] it must be patent to all who have read them, and who have attentively followed this discussion, that the original of my translation is neither a testament nor a legacy in the technical sense of either of those terms. Webster's technical definitions are, therefore, wholly irrelevant.

9.—I repeat that the word "Legacy" is used by me in a figurative sense, just as the word "testament" is, as applied to the Scriptures, and as I apprehend the word will be, in the will of Peter the Great, though I don't profess to know much about that document, while as to Japan I am in complete ignorance.

10.—I recommend to the Mail's Reviewer a closer study of etymology, definitions, and the [illegible] of words. He will then, perhaps, be in a position to understand my selection of a title, made more than four years ago, as applicable to the compilation left by Iyeyasu for the guidance of his successors in government. His concluding sentence reads, "I bequeath this record to my posterity." Those few words, coupled with the prefatory instructions he gives as to the disposition of the document, may, to say the least, be regarded as Iyeyasu's will. The record posted by that will I have called a Legacy; and I maintain that the title, if taken figuratively, is as perfect as it can be in English; and that even in a technical sense it is not inapt. I most earnestly hope, therefore, that it may never be relegated to that limbo spoken of by my correspondent; and I am glad to know that many scholars share my hope.

11.—This discussion has already exceeded all reasonable lengths; were it not so, I must go further, and admitting the word *yuiji* to be the correct title of the manuscript, ask on what grounds it is translated *will*. Literally it signifies "a writing left behind" by a person who is dead. That is not the definition of a *will* or of a testament. Many say the idea conveyed by those words is not properly understood by half a dozen Japanese, while the words used as their equivalents, viz. *[illegible]* and *[illegible]*, are borrowed from the Chinese, and were very possibly never heard of by Iyeyasu.

Thanking you for your courtesy in admitting this letter into your columns, I beg to assure you that, so far as I am concerned, it shall close the correspondence.

Yours truly,

J. F. L.

Yokohama, Dec. 4, 1876.

As I expressly stated in my last letter that *yuiji* and *yuisho* are synonymous, the four paragraphs which J. F. L. expends in proving that point are simply so much labour thrown away. His original mistake consisted in imagining them to be one and the same word; his present further mistake consists in arguing that because they are synonymous a lexicographical remark which he supposes to have been made in respect of one is therefore applicable also to the other. This is as if one were to argue that because the word contestation in its sense of proof by witnesses is not fully naturalized in English colloquial, therefore neither is the word attestation fully naturalized in literary English.

For proof that J. F. L. is wrong in supposing covenant to be the primary signification of *diatheke* I beg to refer him to the standard authority Liddell & Scott's Lexicon; and for proof that the translators of the Scriptures were right in translating that word testament I beg to refer him to Hebrews IX. vv. 15-20. I trust that in preferring such evidence on these points to J. F. L.'s opinion, I am not, of necessity, laying myself open to the suspicion of dishonesty of purpose or to the charge of questioning his personal veracity.

These, however, are but subsidiary issues. The real question raised by this correspondence is—What is the exact truth with respect to the title of the work which J. F. L. has made known to English readers under the title "The Legacy of Iyeyas"? Does the work in its usual Japanese manuscript form bear any superscription or title? If so what is that title, and what does it mean in English? I will state briefly what I know on these points.

In the year 1870 I had in my hands three copies of the work, besides the one now lying at your office. Each of them bore a title, as is the general rule with Japanese books whether manuscript or printed; and in each the title was *Go Yui-ji*, and since writing my last letter to you I have obtained another copy on loan from a Japanese friend, which I forward to your office herewith. As will be seen, it bears the title *Go Yui-ji kiak kaji* on both the title-page and the cover. From such enquiries as I have had the opportunity of making I now believe that this is its only title, and that *yui-kun* denotes an entirely different work.

I have before me now no less than four distinct writings, the titles of which attribute their authorship directly or indirectly to Iyeyasu. The first is the Testament in one hundred sections, *Go Yuiji kiaKiaiji*; the second is in the form of a *kake-mono*, or hanging tablet, bearing the title *Toshi-gu Go yui-kun*, and consists of a few moral and philosophical maxims. Of both these Iyeyasu himself is the ostensible writer. The other two are books of considerable bulk, professing to record the substance, one of moral, the other of political doctrine orally inculcated by Iyeyasu towards the close of his life. One is entitled *Toshi gu go yui-kai* in three volumes; the other a stout volume entitled on the cover, *Shin-kun go yui-kun*, the last lessons of his deified lordship, and on the title-page *Toshi-gu go yui kun*. It is now evident to me that this last and not the *yuiji* is the work which I have frequently seen referred to and quoted in Japanese books, both manuscript and printed.

It may, then, I think, be accepted as certain that the native designation of the document in question is *Yuiji*, which means a testament, and of the perfect accuracy of the designation there can scarcely be a question.

The most prominent and interesting characteristic of the work is, that in the strict and technical sense of the word it is a genuine testament, bearing the closest analogy to the old Roman testament, from which all modern European wills trace their origin. Roughly speaking the object of the modern will is to distribute the property of the testator in legacies after his death; in the earlier stage of social development the object was the widely different one of providing for the devolution of the family chieftainship. Throughout its long history, the foundation and corner-stone of the Roman will was the institution of the heir. This key-note is early struck in the testament of Iyeyasu:—

"Cap. IV.—In future ages, in the event of there being no direct successor to a dynasty"—[this is surely a little vague: Dr. Dickson however enables us to see what the meaning is:—"If the Kubosama (or Shiogoon) should die childless, etc"]—then the chief councillors are to meet in conference and elect the man most worthy, irrespective of his degree of relationship, to be successor to the family position and power.

Knowing that a legacy is a bequest of some particular thing, as contradistinguished from the devolution of the aggregate of political and social rights called an inheritance, J. F. L. attempts to found an argument in favour of Legacy on the word record, which appears in his translation. Your readers will, I think, learn with some surprise that there is no such word in the original. The full sense of the original—*Kore wo shizoku su*—is simply "this I enjoin." Comment upon such translation and argument as this is needless.

As to J. F. L.'s assertion that he knows that many scholars share his hope for the continued use of his misnomer, I will only remark that if any one of them should feel inclined to favour the public with the reasons for the hope that is in him, it may be confidently expected that he will display at least as much candour and courtesy as has been exhibited by J. F. L. throughout this controversy with

YOUR REVIEWER.

ANOTHER HINT TO THE CHARITABLE.

To the Editor of the "Japan Weekly Mail."

Yokohama, 9th December, 1876.

Sir,—As the claims of the sufferers by the late great fire at Yedo are being strenuously advocated, it would be as well not to forget that the Cemetery and Hospital will probably appeal to the Community for aid before long, and that in addition to meeting the just claims which these may have on residents here, many mites could be probably bestowed with advantage on some distressed foreign subjects in this place. When the Patriotic Fund during the Crimean war was being largely subscribed for I believe the funds of the hospitals, and other kindred institutions, suffered considerably, but let us hope the present may not be a parallel case.

I am, Sir,

Your obedient Servant,

W.

Law & Police

IN THE SUPREME COURT FOR CHINA AND JAPAN.

Before C. W. Goodwin, Esq., Acting Chief Judge.

Tuesday, December 5th, 1876.

On the 7th November the case of Felix Beato *v.* P. & O. Co., was heard in the Provincial Court before H. S. Wilkinson, Esq., Acting Law Secretary, when the jury returned a verdict in favour of plaintiff, but judgment was entered for defendants on legal grounds.

Mr. F. V. Dickins, as Counsel for plaintiff in that case, now applied for a re-hearing, under a section in the Order of Council providing that suits originally instituted in the Supreme Court and heard by the Law Secretary may, on application of either party, be re-heard by the Chief Judge. Mr. Dickins argued at some length on the merits of this application, and said that if the right of a re-hearing were denied him by the Chief Judge, his client must suffer accordingly. He contended that according to the Order in Council he was quite entitled to a re-hearing.

Mr. Ness, as Counsel for defendants, stated in reply, that as all the pleadings in the case had been headed "Provincial Court" it was nonsense on the part of his learned friend to attempt to apply the ruling of the Order in Council, which treated of cases heard originally in the Supreme Court alone, to that now under consideration.

His Lordship, after listening to some further argument on the part of the learned gentlemen, dismissed the application with costs, saying that an application for appeal should have been made as the case had been heard in the Provincial Court.

By consent of Counsel an order granting the appeal was made, and the Court then rose.

IN HER BRITANNIC MAJESTY'S COURT AT KANAGAWA.

Before C. W. Goodwin, Esq., Acting Chief Judge of H. B. M.'s Supreme Court for China and Japan.

Wednesday, 6th December, 1876.

An appeal between W. P. Mitchell (defendant) *appellant*, and Nakajima Seisuke (plaintiff) *respondent*.

Judgment.

This case comes before me on on appeal from a judgment of the provincial Court of Kanagawa. The petition of appeal shows five grounds upon which it prays that the judgment be reversed or varied, or such other order made as may seem just. The questions have been fully argued by the Counsel who appeared for the parties in the Court below. I shall take these grounds in their order.

The first ground of appeal is, that permission to amend the answer when applied for at the hearing was refused by the Court on any terms. It appears that the amendment applied for involved the introduction of a plea of certain conversations held previous to the reduction into writing of the agreement upon which the plaintiff sued, by which that agreement was sought to be varied. It was alleged that a guarantee agreed to be given by a third party for the balance of purchase money was by verbal stipulation to be a negotiable instrument. The case of Morgan *v.* Griffiths and other cases of the class were cited to show that evidence of such a verbal understanding was admissible. I think all these cases are clearly distinguishable from the present, and that they determine nothing more than that a verbal agreement about a matter collateral to the subject of a written agreement may be sued upon. But here the object was to introduce an additional term into the written agreement, a term which certainly, if intended to have been enforced, ought to have been introduced into that agreement. To hold that evidence of this understanding was admissible would be to negative in the most unconditional manner the fundamental rule that a contract when reduced to writing cannot be varied or added to by parole evidence. Had the answer, therefore, been amended in the sense proposed, the plea would have been unavailing, and I think the refusal to permit the amendment is not a substantial ground for interferences.

The next ground is the exclusion from the Court, upon the first day of the hearing, of the defendant at the same time as his witnesses were ordered to withdraw. It seems questionable whether a party to a cause who intends to give evidence for himself can of right be required to withdraw, though it has been occasionally done. As in the present case the defendant was not excluded after the first hearing—and I cannot suppose that any substantial injury was done to his cause by the temporary exclusion—I do not think this a sufficient ground for a new trial.

The third ground rests upon the objection of a great number of items of evidence, the main object of which was to prove that the plaintiff entered into a verbal agreement at the same time that he signed a certain letter relative to taking delivery of the goods, the effect of which verbal agreement would be, if admitted, to add an important condition to that expressed in the letter. This letter (made subsequent to the original contract) being but a one-sided memorandum signed by one party only. I think any evidence as to the way in which it was made and the terms, if any, upon which it was accepted, was at the stage of the trial at which it was tendered admissible (Lockitt *v.* Nicklin); but whether its rejection is a sufficient ground for a new trial must depend upon a view of the whole case, and the consideration whether its acceptance would have necessitated a different result from that which actually arrived.

I now come to the fourth ground, which is that the decision was against the weight of evidence. And here it is necessary to state the facts of the case. The plaintiff Nakajima contracted by an agreement in writing, dated 20th May, to buy of the defendant Mitchell 15,000 cases of oil at a certain price. Nakajima to pay Mitchell 20 per cent. of the said 15,000 cases *on delivery at the hatoba*. The balance to the guaranteed by one Sawa to be paid within 90 days from date, and the promissory note of the said balance to be stamped by the said Sawa, and the same to be delivered to Mitchell in the name of the Japanese. Seven hundred dollars were paid down as bargain money—the transaction to be *completed on the 22nd instant, weather permitting*. Either party failing to complete his part of the contract to pay to the other, who should not have broken it, 4,000 dollars. On the 22nd Nakajima comes from Yedo to Yokohama ostensibly with the purpose of fulfilling his contract. The first objection to doing business proceeds from the defendant Mitchell. Owing to the weather, he said, it would be impossible to land any cases that day. He then goes on to say that the landing of 15,000 at once is an impossibility, and that 2,000 or 2,500 was the most that could be landed in one day. Nakajima at once remarked that this was not according to contract, and took time to consider what he would do. On the 23rd he writes to say that he agrees to take delivery in two lots that day and the next, on the terms originally agreed on as to payment. Mitchell, however, was not prepared to do this. On the afternoon of the same day Mitchell sees Nakajima, and presses him to take delivery of 2,000 cases, and he suggests that Nakajima might pay him 2,000 at once, which was much more than the 20 per cent agreed to be paid on delivery. According to Mitchell's statement, Nakajima agreed to do this, and to bring the money and likewise Sawa's security at 5 o'clock. Nakajima's account of the matter varies something from this. He says nothing about the security of Sawa, but that having been assured that he would get the whole of the goods on the 24th and 25th, he ultimately signed a letter (dated 23rd May) agreeing to pay out of the $8,025 (which was the whole sum payable on delivery of the whole 15,000 cases) the sum of $2,000 on the morrow, the 24th. Nakajima declined to pay the money on the ground, as he states, that only 2,000 cases were then ready on the hatoba, and there were no signs whatever of any preparations to deliver the balance. There was, in fact, every appearance of the then existing contract that the whole of the cases should be delivered in the course of the 24th and 25th being broken. Ultimately, Nakajima was induced to sign on that day (24th) another paper agreeing to pay $2,000 on delivery at the hatoba on the morrow at 2 o'clock of 3,000 cases. Mitchell stated

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

that a verbal agreement was made subsequent to and before the writing of this note that Sawa's security should be forthcoming at the time the money was brought. This is the evidence which was ruled out, and upon the rejection of which the main argument for a new trial is based. The document was executed in Mitchell's presence. He did not sign it himself, but if it was really his intention to have insisted on the production of Sawa's security, why was not this term introduced? He accepted this document, made, it will be seen, for his own convenience, and in derogation of the original contract; and upon this document, together with the two others before mentioned modifying the original contract, he relies, as he states in cross examination. On the 25th the parties meet at the hatoba at 2 p.m.; 2,000 cases and no more were then landed. Nakajima gave Mitchell the stipulated $2,000 in Mitsui notes. At that time Mitchell had control over 100 cases only, not having himself paid for more than that number. He goes off to the Bank and obtains payment of the notes,—promises to return with a delivery order for the rest of the 1,900 cases and leaving one of the middlemen, Totaka, to go on with the delivery. He does return, but without the delivery order, but is preceded by Mr Morse the real owner of the oil, who had not at that time been paid for the oil beyond 100 or 200 cases, but had contracted to sell 2,000. This gentleman was the first person to interfere with the delivery of the oil, and he did so on the ground that it was his, and that he had not been paid for it. He was ready to have delivered it then and there on the payment by Mitchell of the price. Mitchell's contention is that he was not bound to put himself in a position to deliver the oil until he had received Sawa's security for the balance. Nakajima contended that he was not bound to give this security until the whole 15,000 cases were delivered, which was to be the fair construction of the original contract. Now if we look at the evidence of the various middlemen who were mixed up with the affair, we find their evidence conflicting: those on Mitchell's side stating that there was a verbal understanding that Sawa's guarantee should be produced when the $2,000 was paid, while Nakajima's witness Furukawa knew nothing of this. The whole of the evidence of these witnesses must be looked upon with much suspicion; but it appears to me that Furukawa's account is the most probable, and certainly most in harmony with the ascertained facts and with the various documents of the 23rd and 24th. I do not think then that the decision is against the weight of evidence as it stands, nor do I think that Mitchell's evidence as to an understanding about the guarantee, had it been admitted, would have strengthened his case. The real fact seems to be that neither party was on the 22nd, 23rd or 24th in a position to fulfil the literal terms of the contract, though both had made some preparations for doing so. Delay was convenient to each, but Mitchell is the first to betray the weakness of his position and to ask for a modification of the terms; and under such circumstances it would be extremely unfair to hold Nakajima bound to anything further than the papers he was induced to sign, or to introduce a verbal understanding to modify them. He was doubtless not in a position at the time to produce the guarantee nor was he bound under the original contract to do so, until the whole of the amount of the oil was delivered; and he would probably have expected to sign any paper engaging to produce it when he paid the $2,000. I think it a fair inference from the whole evidence, or at any rate, the inference most favourable to Mitchell's *bona fides* in the matter, that he accepted the documents of the 23rd and 24th *simpliciter* (*Stones v. Dowling.*) because he could get nothing else; and that he is not entitled to introduce another term into these agreements, or to contend that a breach of contract was committed by Nakajima who complied strictly with what had been reduced to writing.

Under these circumstances, the return of the $2,000 and of the $700 bargain money was the least that could be done to justify his non-delivery of the 2,000 cases, and the decision of the court below is, in my opinion, open to no exception.

The last ground, namely, that the issue being whether or not a breach of contract had been committed, and if so by whom, is not decided by the judgement, does not require much remark. The judgment or verdict sufficiently points to the conclusion to which the judge, performing here the functions of a jury, has arrived, and I find no reason for interfering with this decision because the precise view has not been pointed out, the order made being manifestly consistent with justice.

As the appellant has obtained leave to prosecute this appeal *in formâ pauperis*, no costs of appeal can be given.

An application has been made on the part of Nakajima for the return of the Court fees which have been paid by him in the course of this case.

The rule always adhered to in China, and in some cases acted upon in Japan, has been that no Court fees should be exacted from a Chinese or Japanese plaintiff suing in the British Court in his own person, but that in case of the employment by a plaintiff of a lawyer the usual fees payable upon the various steps of proceedure should be required. It appears that some years ago a remonstrance was made by the Governor of Kanagawa against the exaction of fees, under any circumstances, from Japanese plaintiffs in the British Provincial Court at Kanagawa, and the representation was enforced by the statement that unless the demand to remit these fees were complied with no suits of English subjects against Japanese would be allowed to proceed in the Japanese Court, where it seems no fees are payable by foreign plaintiffs. As the result of this correspondence, it was arranged that in future no fees should be exacted from Japanese plaintiffs. This must be considered as the rule of the Court here, and I have accordingly directed that the fees paid by the plaintiff Nakajima be returned to him.

IN H. B. M.'s PROVINCIAL COURT.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Friday, December 8th, 1876.

Suzuki Saijiro, a Japanese *coolie*, charged George Shiras, a blacksmith residing at No. 113, Creek, with having assaulted him with a stone on the morning of the 3rd ultimo.

Suzuki Saijiro, examined, stated:—I am a boatman living at Ishikawa. On the 3rd November, at ten o'clock in the morning, prisoner struck me without any provocation. I was one of four men who were drawing a cartload of stones. I was not doing anything when prisoner struck me, and swore at me. I expostulated, but he only gave me a violent blow in the eye. My eye swelled, and the doctor came three times a-day to see me. I cannot see well. I was disabled from work and am still so. My wages are generally from six to seven *mon* a month; at that time I had five *mon* and one *bu*. I have not been able to earn even the doctor's fee since then. I am unable to do any work.

Prisoner had no questions to ask witness.

Saijiro, to Court:—The doctor said it would take eighty days for my eye to be cured.

Matsumoto stated:—I live at Yato-machi, Motomura. I am a *coolie*. There were two coolies besides myself and Saijiro drawing a cartload of stones to where the road was to be mended. There were only two spades and two of us began to use them. Prisoner cried to us to be quick and empty the cart, and then came up to Saijiro and struck him. Saijiro afterwards made a complaint. His eye swelled tremendously. We were engaged to drag the stones along one of the Bluff roads. The assault was committed at No. 113, inside the compound. We were emptying the stones from the cart and spreading them over the ground. Mr Anderson employed us.

Yushi, a cart coolie, stated:—I live at Ishikawa, Sanchome. Prisoner assaulted Saijiro without any reason. I cannot understand why he struck him. I saw Saijiro's eye after he was struck. It was much swollen.

Another cart coolie gave evidence much to the same effect.

Prisoner asked this witness if Saijiro was standing or sitting when struck by the stone. Witness answered that he was standing when hit, but immediately fell down.

Complainant recalled, stated:—The day after I was assaulted one of the witnesses picked up the stone. The blood spurted from my face when the stone hit me. About ten days after my eye was completely closed up. I cannot personally identify the stone now in Court. Matsumoto brought it to me.

Matsumoto, recalled:—That is the stone which I found lying beside complainant when he was struck. I took it home with me, and think there can be no doubt about its identity. There was only gravel in its vicinity, and a few large boulders. I saw the stone thrown. I did not see it picked up. The complainant and prisoner were with in 9 or 10 yards of each other when the stone was thrown.

His Honour called for the doctor to give evidence but he was not present in Court. Complainant said his certificate had been handed in.

Prisoner said he had no witnesses to call.

His Honour then remarked that it was evident that complainant had received some injury at the hands of prisoner, and as he brought forward no defence it must be understood that the charge was admitted. Complainant was therefore entitled to some compensation, and it was prisoner's duty to see that he got such. The case would therefore be adjourned till Wednesday next at 10 a.m., and His Honour hoped to hear before that time that the matter had been settled amicably between

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the parties. In the meanwhile, prisoner was bound over in his own recognizances to make his appearance in Court at the time stated.

IN THE U. S. CONSULAR-GENERAL COURT.
Before General T. B. VAN BUREN, Consul-General.
Messrs. C. D. HARMAN and G. HURLBUT, *Assessors.*
Monday, December 4th, 1876.

AKANUMA TSUNEKATZU, Tôkiô *Fu Chusai Kan vs.* J M. BACHELDER.

This action is brought by the Tôkiô *Fu*, the local Government of Yedo, by its representatives to recover monies alleged to be due by the defendant as rental upon certain lots, being within what is known as the "Foreign Concession." Tsukiji, Yedo, and purchased by the defendant at a public sale held in June 1870, and also two per cent per month as penalty upon the amount claimed for the non-payment thereof.

The answer of the defendant admits the purchase of the lots, but claims that they were purchased under a certain condition contained in a convention between the Japanese Government and the Foreign Ministers in Japan executed on the 4th of May 1870, which condition he alleges has not been fulfilled on the part of the Government; by which non-fulfillment he has been greatly damaged and the property in dispute rendered of little or no value.

He further claims that in addition to depressing the value of the lots, the action of the Government in violating the condition referred to has damaged him, the defendant, to the amount of Ten Thousand Dollars,—and he therefore prays judgment that the claim of the plaintiffs may be dismissed and that he may have judgment for $10,000, and costs.

The condition or covenant referred to by the defendant, and which it is alleged was violated by the plaintiff, is that the district known as the Foreign Concession at Tsukiji, in Tôkiô, in which the lots purchased by defendant are situate was to be the compulsory residence or place of business of all foreigners who should come to reside or engage in trade in Tôkiô.

The defendant claims that this condition was the chief inducement to himself and others to purchase lots, and that if the same had been observed on the part of the plaintiff he would on his part have faithfully paid the rent and kept the other covenants of his lease.

No land in Japan is permitted to be conveyed to foreigners in fee; but in the different Treaty ports, a certain section has been set apart by the Government, within which foreigners are permitted to lease lots. By conventions between the Japanese Government and the foreign Ministers in Japan, the rental per *tsubo* (a Japanese land measure containing about 36 square feet) and the upset price per *tsubo* at which the leases may be taken are fixed for each of these Concessions

The lots, or rather the leases are then offered for sale at public auction and are sold to the highest bidders above the upset price

The evidence in this case shows that at the time the auction was held in June 1870, the defendant purchased lots Nos. 1. 2, 21 and 22 in the Foreign Concession at Yedo, as claimed in the plaintiff's petition, and paid therefor the sum of about $8,200 for upset price and premium, and one year's rent in advance amounting to $443.

In the convention for the settlement of foreigners at Yedo executed by the Japanese Government and the foreign Ministers on the 20th November 1867, it is provided as follows:—

Article I.—"Within the limits coloured *red* in the annexed plan "foreigners of all nations having treaties with Japan may hire "houses and reside for purposes of trade. But no Japanese shall "be compelled to rent any buildings to foreigners within the said "limits against his will. Moreover, as the Japanese Government "are willing that foreigners of those nations having treaties with "Japan should enjoy at Yedo the same facilities for leasing ground "and building houses that are secured to them by treaty at the "ports, the Japanese Government are prepared to lease to foreigners for building purposes that portion of land on the same plan "which is coloured *blue*."

Article II. "Whenever the above named building ground shall "have been occupied by foreigners, and more space is required for "their use, the Japanese Government will prepare the adjoining "space marked A.A. on the same plan, which in that case will be "provided with a surrounding road of not less than forty feet in width. "Should more land be subsequently required, the above named "building ground will be further extended, as may from time to time "be desirable, within the limit coloured *red*."

Article III. "Before the opening of the city to foreign trade, "the Japanese Government will clear the ground coloured *blue* in "the same plan, and will surround it with a road which shall be "properly drained and of not less than forty feet in width The "ground within this site not required for roads will be leased to "foreigners in the manner provided in Article VI., VII., VIII. "and IX. of the arrangements for the formation of foreign settlements at Hiogo and Osaka."

Articles VI., VII., VIII. and IX., of the arrangements for the foreign settlements at Hiogo and Osaka, referred to in the foregoing article read as follows:—

Article VI. "The Japanese Government will be reimbursed the "cost of preparing the said sites for the use of the foreigners "above named by the sale of the leases of the ground. The land "will be divided into lots and prices placed upon the different lots, "which will vary with the eligibility of the situation, but will "amount in the aggregate to the total outlay incurred by the Japanese Government. This outlay will form the bases for calculating the upset prices at which the lots will be offered to foreigners at auction The foreigners of all nations having treaties "with Japan may bid at these auctions and each bidder may obtain "as much land as he requires. The money realized above the upset prices will be retained by the Japanese Government as compensation for deprivation of interest on capital, and for the risk "that may be incurred of not recovering the outlay."

Article VII.—"All the ground leased to foreigners at Osaka and "Hiogo will be subject to the payment of an annual rent calculated "at a rate that will be considered sufficient to meet the expenses of "keeping in repair the roads and drains, the cleaning and lighting "of and maintaing order in the settlement, and the ordinary "land tax payble at the present date to the Japanese Government.

Article VII. "The Japanese Government will not grant or "dispose of any ground set aside by the preceding articles for "the establishment of foreign settlements at Hiogo and Osaka to "any foreign Government, company or individual for building "or other purposes except at public auction, in the manner laid "down in the preceding articles. The foreign Consuls will not "be provided with separate grants of land by the Japanese "Government either within or without the foreign settlements."

Article IX. "In determining the upset price of all the "land to be thus leased to foreigners at Hiogo and Osaka the "amount of annual rent, the number and size of the streets, lots "and drains, the quantity of ground to be put up at auction "at one time, the conditions and date of sale and the formation "of the cemeteries hereinafter mentioned, the Japanese Government will consult the Foreign Representatives."

The convention of May 4th, 1879, relative to the foreign settlement at Yedo, provides as follows:—

Arricle I. "The limits within which foreigners may hire houses "are shown by the *red* line on the annexed plan. It is now agreed "that, within these limits, Japanese may let their houses to foreigners for any period not exceeding five years, with the option of "renewal on terms to be negotiated between the parties. Foreigners "renting houses from Japanese within the said quarter will pay the "same charges as are paid by Japanese for keeping in order roads, "drains or canals."

Article II.—"With reference to articles I and II of the arrangements for the settlement of foreigners at Yedo, dated November "26th, 1867, it is now agreed that the land within the *blue* "line shewn in the annexed plan shall be leased by the Japanese "Government to foreigners. This site shall be separated on the "north side by a road of one hundred feet in width, and the front "block marked A shall be cleared of Japanese houses as soon as the "two adjoining blocks marked B B and the three rear blocks "marked C C C shall have been leased to foreigners."

"When all the ground within the blue line shall have been "occupied by foreigners, the settlement shall be extended to the "canal marked D D D on the annexed plan."

Article III.—"The leases of all lots contained in the two front "blocks remarked B B and the the three rear blocks marked C C C "on the annexed plan shall be put up to public auction on the 2nd "day of June next. The upset price of all the lots in the five "blocks above mentioned shall be six *boos* per *tsubo* and the annual "rent one *boo* and a half per *tsubo*. The up-set price of lots "within the block marked A, and within the quarter bounded by "the canal marked D D D, shall be eight *boos* per *tsubo*, and the "annual rent one *boo* and a half per *tsubo*."

Article IV.—"The sale of the leases shall be conducted on the "conditions annexed to this arrangement; a month's notice will be "given by the Japanese Government of all subsequent sales of "leases of land within the said limits, which sales may be held by

Digitized by Google

"them either on the information of the Foreign Consuls that more "land is required by foreigners, or whenever the Japanese Govern- "ment themselves may deem desirable."

The questions to be decided by the Court are, *first*—whether the provisions above quoted form such a covenant and obligation on the part of the Japanese Government and the plaintiff as its agent, the violation of which should defeat the plaintiff's claim in this proceeding; and, *second*, if such obligation was created, has a clear violation or breach thereof been shown on the part of the plaintiff.

The well known principle that "He who seeks equity must do equity" appeals for its justice to the common sense of every mind, and is as binding upon Governments as individuals; and if therefore the evidence establishes the position claimed by the defendant, and the plaintiff be adjudged to have entirely departed from an express or clearly implied obligation, which obligation formed the most material inducement to the defendant to enter into his contract, and the faithful observance of which on the part of the plaintiff was essential to make the said contract of any value to the defendant, it seems to be my duty to deny the prayer of the petition.

What then is the covenant, if any, to which the Japanese Government has bound itself in the conventions from which I have quoted which are referred to in the leases of the land in question, and which the evidence shows were publicly read at the sale.

By no express language is it anywhere provided that foreigners shall not reside in any part of Yedo, but the express permission of such foreigners to reside and lease property within the concession, implies the denial of their right to live elsewhere—"*expressio unius est exclusio alterius*,"—and that such is the proper construction of such parts of the convention as bear upon the subject, I think an examination of the circumstances and usages of the times when they were made will establish.

Upon this point the evidence is clear that at the dates of each and all of the conventions, foreigners were prohibited from residing anywhere in Japan outside of the so-called "Foreign Concessions" at the Treaty Ports, and that the very purpose of entering into the conventions providing for a foreign concession at Yedo, was to enable foreigners to reside at that place, at all, such residence having been, up to that time, impossible.

It also appears that at the time of this sale a large hotel had been erected within the prescribed limits by a Japanese Company, under Government auspices and that at this house or at a few smaller lodging places in the vicinity, all foreigners coming to Yedo were, for some time, compelled to live. Whenever any foreigner desired to go outside the Foreign Concession, he was accompanied by an armed guard, and a similar guard was placed at or near the hotel.

The necessity or advisability of such protection for foreigners having since vanished, and so far as personal danger is concerned, they may go about as unconcernedly in Japan as in any other country.

In all the treaty ports, however, save Yedo, they have been confined in their residence, with very fair prescriptions, to the Foreign Concessions, and in consequence property in those Concessions has become valuable, and it was the understanding apparently of both the plaintiff and defendant at the time of the purchase of the lots in Tsukiji by the latter, that the rule thus observed in the other treaty ports should be also strictly enforced in Yedo.

That this has not been done, however, the evidence clearly establishes,—out of about 600 foreigners at present residing at Yedo only 1/6 to 1/5th are residents in the foreign concession:—indeed this is admitted by the plaintiff, who claims that those residing outside the Concession are employés of the Government or of Japanese subjects.

It will be observed, however, that in the provisions of the conventions setting apart the limited space for the residence of foreigners, nothing is found exempting those in Japanese or even in Government employ from the necessity of residing within such limits, and the evidence shows that at the time of the sale and for some period subsequent this was the understanding of both parties and no exception of the kind referred to was permitted. The fact also appears in evidence that a very considerable number of foreigners so resident in Tokio outside the Foreign Concession are not in the employ either of the Government or of Japanese while a very large number of them are only nominally in such employ; using the names of their own servants while doing business on their own account. The rentals and other expenses of such parties are very greatly less than they could be it within the Foreign Concession, while the opportunities of trade are better, and the best understanding seems to prevail between the strangers and natives.

These facts perhaps show the practicability and advantage of doing away with the restrictive policy, in reference to foreigners throughout the Empire, and the Court is indisposed by its action to do anything which may serve to check this policy.

But in the cause under consideration I am dealing with the equitable rights of an individual, which right I have no authority to ignore even to secure what may be esteemed a public good.

Upon a careful consideration of the whole case I am driven to the conclusion that the Japanese Government:

1st—Did enter into a covenant with the defendant, and other purchasers of land, which covenant was a continuous one running with the leases, that all foreigners who should come to reside or do business in Tōkiō should be confined in their residence and place of business within certain well-defined limits known as the Foreign Concession at Tsukiji.

2nd—That this covenant was the principal inducement to the defendant in his purchase of the leases in question, and his expenditure of large sums of money in buildings and improvements upon the land.

3rd—That this covenant has not been observed by the plaintiff, and by such non-observance the land has been divested of its value and the defendant greatly injured.

I am therefore of opinion that the plaintiff is not in a position to maintain this action for the recovery of rent under the leases. And that his petition must be denied.

In reference to the claim for damages set forth by the defendant in his answer, I am of the opinion, without considering the question of the power of this Court to render a judgment against a suitor who voluntarily submits himself to its jurisdiction, that I do not possess the authority to render any such judgment against the plaintiff in this cause for the reason that he represents the Imperial Government. As a general rule a sovereignty is not liable to money judgments in Courts within its territorial jurisdiction, save by the express permission of such sovereignty: and I am not advised that His Imperial Japanese Majesty has conferred such jurisdiction upon any tribunal within his Empire. It is competent, however, for this Court to examine into the allegations of the defendant in this cause and the evidence upon the subject and certify to the facts. A number of competent witnesses have testified upon the point and given their judgement that the lots purchased by the defendant have been rendered almost, if not wholly, valueless to foreigners, by reason of the fact that the great majority of foreigners in Yedo are permitted to live outside the Foreign Concession.

Mr Doyle says:—"Had all foreigners been obliged to live in the Foreign Concession at Tōkiō it would have been very beneficial, in my judgment, to the whole prosperity of the place and the value of property there .....Instead of being paralyzed, property would now have been of value there in my opinion." And again "If the original design had been carried out, and foreigners had been obliged to reside there the land would in my judgment, (and it was so generally supposed) have had a considerable speculative value. There is practically no business now in Tsukiji." Referring to the improvements made by defendant he says:—"The improvements are among the best and finest in Yedo. In my judgment they must have cost in all in the neighbourhood of from 10,000 to 15,000 dollars." When asked—if placing the improvements at $12,500 and adding the amount paid for the lots at auction, *yen* 2,814, what he would now consider the relative value of the property, he replied:—"Unless for some specified purpose and under some constraint on the purchaser I do not believe it would bring 25 per cent. of its cost. If it were tenantless and offered to me I do not think I would give anything for it of consequence. I should say perhaps $4,000 might be a fair price for it."

Mr John Hartley, to the question of what, in his judgment, property would now be worth in the Foreign Settlement at Yedo, had all foreigners been compelled to live there, answered:—"I think the lots would now be worth, under those conditions, $3 per *tsubo*. *Now* I consider them of no value on account of the enormous rental and foreigners not being obliged to live there. If my property there was now destroyed by fire I would sell the ground for $50, or give it away if possible, to save the ground rent."

Mr Charles Moss says "Had all the foreigners been obliged to reside in Tsukiji who live in Tōkiō, I think the present value of land in the Foreign Concession would be at least double."

Mr Cataud says:—"That foreigners are permitted to live outside Tsukiji has certainly destroyed the cost value of land in the Foreign Concession. Had foreigners been compelled to live within the Foreign Concession, in my judgment property sold at Tsukiji could at any time have been sold at more than its cost."

Mr Kanigan says:—"I bought some property in the Foreign Concession at Yedo upon the same conditions that others bought. Do not own the lot now. Kept it about four years and when I parted

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with it had expended about $1,600 for the premises and rent. I gave it to Captain Bacheldar for $1. I did so because it was a constant expense to me. The people I expected to do business with hired places in other parts of Yedo, where they could get them much cheaper."

Mr Brennwald says:—"I bought property in the Foreign Concession at the sale in 1870. Bought on the terms of the convention published at the time. I understood the Settlement was to be kept as a Foreign Settlement like the Foreign Settlements at the other open ports. This has not been done. The Japanese Government has not kept it as such Foreign Concession. I mean they have not compelled all the foreigners to live there. The permission to foreigners to reside outside the Foreign Concession has lessened the value of land in Tsukiji Property there under present conditions is worth nothing. I think it would be difficult to find a buyer for property there at any price."

Mr Schmid says:—"I bought at the auction of 1870. The property has since then greatly depreciated in value on account of the Government having allowed foreigners to live outside the Foreign Concession, contrary to the stipulation contained in the convention I think perhaps the selling value of our property is about one quarter its cost. I consider lots 1, 2, 21 and 22 like the other lots in Tsukiji have no marketable value, but if any one wanted them they might sell for about one quarter their cost."

The defendant says:—"My property in Tsukiji up to this time has cost me over $22,000. The property at present has no marketable value."

The upset price of the lots purchased by defendant is shown by the evidence to have been about *yen* 1,771, and the premium paid over one thou and *yen*. The ground rent for one year was also paid, and endorsed upon the leases, amounting to $443.

Taking the cost of the land, rent and improvements to the present time at $22,000, as stated by the defendant, and estimating the present value of the property according to the evidence at one fourth of the cost, if indeed it has any value, it would appear that the defendant has suffered damage by reason of the breach of the convention referred to, on the part of the plaintiff, to at least $10,000, the sum claimed, and I therefore hereby testify to that fact.

The judgment of the Court is that the petition be dismissed and that the plaintiff pay the costs of this proceeding.

(Signed) THOS. B. VAN BUREN, *Consul-General.*

(Signed) CHARLES D. HARMAN, GEORGE HURLBUT, } *Assessors.*

December 2nd, 1876.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq., Consul.

Messrs. Peltzer and Francke, Assessors.

Friday, December 8th, 1876.

J. SMEDLEY *versus* P. HEINEMANN.

This was a claim for $200, with interest from 1st January last and costs of suit, for drawings and plans furnished to the defendant by the plaintiff at his request.

Mr Montague Kirkwood appeared for the plaintiff, the defendant appeared in person.

Mr Kirkwood stated that the claim in question was a very moderate one, that it consisted of two charges, one of $25 and one of $175, the former being for a rough plan, and the latter for a complete plan of buildings proposed to be erected by the defendant on lot 198 at a cost of $5,880, that being the amount of the contractor's estimate. The charge made was calculated on a lower scale that that generally in use here, it being only 3 per cent instead of 3½, on the estimated cost of the buildings. He produced documentary evidence in support of his statement.

The defendant denied having ordered complete plans, and alleged that there was a verbal agreement that the charge should be merely nominal if the work was not carried out.

The Court adjourned to the 22nd instant, to take evidence on the following points:—

1st.—Is it customary in Yokohama to charge 3 per cent. on the estimated cost of buildings for such plans as plaintiff has furnished defendant with?

2nd.—What would eventually be a proper remuneration for the work performed by plaintiff?

In order to make a report on these two questions the Court will appoint two experts, who will attend at the next sitting for examination.

IN THE JUDICIAL COURT OF KANAGAWA.

Before ASAINA KANSUI, Esq., Vice-President.

Monday, December 4th, 1876.

H. AHRENS & Co. *v.* OMIA SHOBIYA.

(Continued from 25th ultimo.)

This was an action to compel defendant to take delivery of and pay for a quantity of President's cloth sold to him by plaintiffs. Defendant had contracted to take delivery of the same at the end of October, but did not on the plea that they were not according to the sample.

Plaintiffs were represented by Mr. S. Schmid; defendant appeared personally.

The Court asked if plaintiffs had any further witness to call.

Mr. Schmid answered that he wished to call Mr. Hake, the salesman, and once more, Riske, his second *banto*.

Th. Hake stated:—Defendant came on the day of the contract to No. 29 and bought a lot of Presidents at the price of 82½ cents per yard. There was nothing in the contract about samples, or quality of the cloth. Two or three days afterwards defendant asked for a sample. I do not know if the interior of the sample now in court is as when given to him; it appears to be right outwardly. At the time he ought to have taken delivery, defendant came to our office and arranged to take half of the goods, 50 pieces, and pay $1,500. Then I heard that defendant had called two men to see that the goods were like the sample. One day after that I met Mr. Takahashiya in Tôkiô, and I asked him how he found the goods. He said the goods were equal to the sample. A day or two afterwards I met Mr. Nakashimaya in his own house in Tôkiô and put the same question to him. He answered he would have nothing to do with the whole affair, so I said nothing else to him. By-and-bye I asked him for bargain money. That was after the time of delivery had passed. He promised to bring it, but never did. He came for one case but I would not let him have it. I kept the $300 which he brought for bargain money. That is all I know.

The Court asked witness who were present at the making of the contract.

Mr. Hake answered that defendant came himself alone. Witness knew, however, that defendant was buying for Nakashimaya in Tôkiô. Witness had acted personally in making the contract. No sample had been shown to defendant. Defendant knew the cloth very well. Plaintiffs had only two qualities and defendant got the better sort.

The Court said that though defendant might know what plaintiffs had in their godowns, yet in a transaction like this surely a sample of the goods should be given.

Mr. Hake said defendant had been shown a sample several times by the *bantos*. There was no great difference in the quality of the two kinds of cloth which plaintiffs had. Defendant had received the better quality which was 2½ cents per yard dearer than the other.

In answer to the Court Mr. Hake further stated:—Defendant told him which quality he wanted. There was no sample ready for him at the time of the contract. Plaintiffs only let him have one when he insisted so much upon getting it afterwards. He knew the quality of the cloth very well and witness did not intend to give him one at first. The *banto* came three days after the contract and asked for a sample for defendant. I said there was only one in the house and as defendant was not buying the whole of the invoice it would be required afterwards. I was mistaken, however, and another sample was found and given to defendant. I was not present when Takashiya came to examine the goods. Defendant had promised to bring the bargain money and was to receive then one case. When he came for the case, as he had not paid the bargain money, I kept the $300 on that account and refused to let him have it. Defendant did not see the bale at all. I issue the godown orders and defendant did not get any such. Defendant had not seen the goods in witness' presence. Defendant came personally proposing to take delivery of the bale but as witness knew he only intended to look at them and then refuse to take than, he asked for the money.

Riske, plaintiff's second *banto*, stated that when defendant came with the $300 to receive one case of the cloth he, Riske, referred him to Mr. Hake, who refused to let him have it, though witness did not exactly know what passed between Hake and defendant. Witness saw the $300.

Mr. Schmid said that as the Court had ruled that Riske's evidence should not be admitted on account of his error with regard to the time the sample was given to defendant, he would

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

request the Court to question him a second time, and ask if this sample was not given defendant several days after the signing of the contract, and that no sample was given on that occasion.

Riske was again examined on this point, and said that he did not know about the matter till after the signing of the contract, when defendant's men came for the case and Mr. Hake would not give it him.

Mr. Schmid had no questions to put. Plaintiffs' witnesses had now all been heard.

Defendants' witnesses were now asked to give their testimony. Riske, in cross examination, corroborated Mr. Hake's evidence in most part. The original contract in Japanese was produced by plaintiffs and handed into Court.

The Court informed Mr. Schmid that the testimony of the second arbitrator was much the same as that of the other, who had been examined at the last session.

Riske was asked to examine the sample in Court. He said the cloth inside the cover was not as given to defendant. It must have been changed by him.

The Court asked defendant if the cloth had been changed after it was taken to Tokio. Defendant answered it was the same now as when given to him by plaintiffs. He vehemently denied having tampered with it.

Mr. Hake to Court: I remember the cover perfectly well, but I cannot be sure about the interior of the sample. The number is the same. I only saw the sample as it is now closed. I did not see the cloth inside.

Mr. Schmid said he was not immediately concerned in the transaction so that he did not know if the sample was correct. It would have to be compared with the cloth itself.

Mr. Schmid in answer to the Court said he had not the slightest objection to have the sample compared with the cloth in their godown.

The Court asked if the goods were found to be different to this sample, to what arrangement would plaintiffs submit?

Mr. Schmid said that he would reserve his rights till after an examination by arbitrators. He would not commit himself at present by making any agreement of that kind.

The Court then said that no decision could be arrived at till this examination took place. Plaintiffs would therefore have to choose an arbitrator, who must not belong to their firm.

Mr. Schmid consented to this, but prayed that the examination should occur at an early date, as the season for the goods had already passed.

The Court said no day could be fixed at present, but plaintiffs would be informed at the convenience of the Court.

The Court then rose.

Saturday, 9th December.

Mr H. M. Meier, of the Imperial Japanese Customs, who had been appointed arbitrator in this matter, now appeared and stated that upon examination of the cloth he had found it to quite agree with the sample.

As this was altogether in contradiction to defendant's plea, verdict was given in favour of plaintiffs.

Defendant said he reserved his right of appeal till Monday.

Tuesday, December 5th, 1876.

ALFRED ROPER v. THE MITSU BISHI MAIL S. S. CO.

Mr F. V. Dickins was counsel for plaintiff; Mr Ness for defendants.

JUDGMENT.

(Official Translation.)

This was a claim for the recovery of remaining salary, damages, etc., through having been dismissed before term of contract.

Plaintiff stated that he was employed per contract by defendant for the term of one year from the 5th February, 1875, up till 1st February, 1876, as Captain on board the Mitsu Bishi Steam-ship Company's owned steamer *Kanagawa Maru*, that since and while fulfilling his employment he has been dismissed before the expiration of his contract, without any suitable reason, and had his engagement cancelled, that he therefore claims, for the remaining eight months of his contract as salary, board, and lodging expenses the sum of *yen* 2,320, *plus* the amount of *yen* 3,000 for damages for his reputation having been dishonoured through dismissal without any reason in all, thus an amount of *yen* 5,320, and to which to be added yet the admitted interest and suit expenses.

Defendant stated that plaintiff had order from defendants to take a pilot on board at Shanghai river, that when the said steamer was to proceed from Nagasaki to Shanghai on the 20th May, 1875, the Agent at Nagasaki for defendants' Company informed plaintiff to the effect that a pilot would be waiting on board the Light-ship at the entrance of Shanghai river for him, but plaintiff disobeyed this order of defendants and did not take any pilot, navigated the steamer through the Shanghai river himself and consequently ran the ship aground; that defendants through this occurrence have been obliged to suffer very heavy expenses, and that plaintiff disobeying the orders of his employers and neglecting his duty as above was thus for that reason dismissed from their employ by defendants before the expiration of the contract.

The Court having duly taken into consideration the presentations of both parties, gives the following decision:—

1st.—Plaintiff declared that on the proceeding of the ship from Nagasaki to Shanghai on the 20th May 1875, Pilot Mooney, who was usually on board refused for some reason to come on board, that he, plaintiff, was then informed by defendants' agent at Nagasaki that a pilot was waiting for him on board the Light-ship lying at the entrance of Shanghai river; that on the 22nd May 1875, the ship approaching Shanghai river consequently before reaching the Light-ship at a distance of 14 miles, he blew three times the steam whistle in order to get the pilot on board; that the Light-ship did not answer by any signal to this whistling and that moreover not the slightest sign of the approach of the awaited pilot was perceived; that plaintiff under these circumstances did not let any boat down for to fetch the pilot as he thought it would have been in vain. The Court compared this statement with the extract of the Light-ship's journal dated the 22 May 1875, signed by Bisbee, Shanghai Harbour Master, and has with the evidence of Sutherland, witness for defendant, and it has been proved that conformably to plaintiff's expectations the pilot in question was not waiting for plaintiff, however as plaintiff had received instructions from defendant to the effect that a pilot for that voyage was waiting on board the Light-ship for him and he plaintiff notwithstanding that, not sending to the Light ship in order to ascertain himself whether that pilot was waiting or not, but passing the Light-ship only, is a proof of great carelessness on the part of the plaintiff, while he had received the orders from defendants as before mentioned.

2nd.—Plaintiff states with regard his to running the steamer aground on or about "Black Point" that at about 1½ mile ahead another steamer was coming and that this happened through wanting to avoid a collision with that other ship on its passage, that according to plaintiff's attestation there has not been at all any negligence on the part of the Captain. But defendants can not admit the fact of another steamer coming from ahead. That the testimonies of the witnesses of both parties to this effect being entirely contradictory to each other, can thus not be regarded upon as being satisfactory ones. The Court will for a moment admit the log book kept at that time where it is said that "a steamer was coming from ahead." But plaintiff, however, testified himself that there were deeper places of some 400 yards wide on his course and that the other steamer that was coming from ahead had passed him since some seconds at some 180 yards distance when the ship went aground, that the course of the steamer coming from ahead was nearly in the middle of the river, that plaintiff according to his own statement and conformably to the Rules of the road was aware that he had to pass on the port side and that thus by doing so he would have avoided the above mishap, but notwithstanding this he passed on starboard side and consequently occasioned the grounding of the steamer, a thing which cannot be considered otherwise but to be without doubt an act of great negligence and carelessness on plaintiff's part.

3rd.—That it has consequently been found that plaintiff after his having been dismissed has no right to claim from defendants any remainder of salary, board nor lodging expenses, neither damages.

This 5th day of 12th month of 9th year Meiji.

(Signed) YOKOHAMA SAIBANSHO.

IN THE KANAGAWA SAIBANSHO.

Before ASAINA KANSUI, Esq., Vice-president.

Wednesday December 6th, 1876.

MALCOLM WILCOX & Co. v SHINANOYA YENUSKE.

(Continued from 29th ultimo.)

This was a petition that defendant be ordered to take delivery of a quantity of velvet, value $2,660. Defendant's plea for not taking delivery was that the velvet was not according to sample.

Plaintiffs were represented by Mr Temple Willcox; defendant appeared personally.

The Court inquired if Mr Willcox had any further deposition to make.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Mr Willcox replied that he had nothing further to state but would like to ask defendant a few questions.

Kimura Riyemon, the first arbitrator, stated that there were in all 300 pieces of velvet in two lots of 150 pieces each. He had, in company with Mr Walter, examined these, and took three pieces out of one case, No. 1,088 he thought, and found them quite different from the sample. Then three were taken out of No. 1,037; these were found even worse than the others. Another piece from the same case was next examined and it differed still further from the sample. Witness asked Mr Walter's opinion, who said he thought the cloth differed from the sample.

Mr Willcox asked what difference witness had found between the cloth and the sample.

Witness said that the pieces examined differed amongst themselves, but all were inferior to the sample, both in thickness and colour.

Mr Willcox now asked witness if Mr Walter had not said, whilst examining the first case, that the two first pieces were better than the sample.

Witness answered in the negative, and Mr Willcox remarked that his memory must be very bad indeed.

Mr Willcox :—Does witness know the velvet market as it is in Yokohama?

Witness :—I know it pretty well.

Mr Willcox:—Then why does witness not know the value of the velvet on that day?

Witness :—I was only called to examine the velvet, not to price it. I many have known the value, but was not asked to give my opinion on the matter.

Mr Willcox:—Will His Honour order witness now to say what he thought the value of the velvet was on the day of examination?

His Honour assented, and witness answered:—I did not pay exact attention to this matter, as I was not called for that purpose. The value is so fluctuating that it would be difficult to say what it was on that day specially.

Mr Willcox:—The fact is he does not want to say what the value was. Can he not state what the fall had been in the market between the 3rd October and the date of examination?

Witness:—I think there was a fall of from 50 to 75 cents per piece.

Mr Willcox:—Does witness, who is in the trade, think it usual, when a shipment of this kind arrives, for the contractor to refuse to to take delivery because there is a slight difference in colour between the sample and the goods?

Witness :—A difference in colour is sufficient for the cancelling of a contract. In some cases, but very rarely, it may happen that by special arrangement between the parties this may be avoided.

Mr Willcox :—How long has witness been in the trade?

Witness :—Since the opening of Yokohama.

Mr Willcox :—Did witness ever contract for velvet of this standard?

Witness :—I remember having bought velvets from plaintiff's firm, but do not recollect the quality.

Mr Willcox :—It was exactly of the same quality and standard. Does witness not remember coming to me and saying on the last occasion that though the bulk of the consignment differed slightly in the colour, yet he could take them because it did not matter?

Witness :—With regard to myself, I do not remember such a thing happening. Yet such a proceeding depends upon circumstances, and it may have been that I was in expectations of further business and did not want to make a fuss about such a slight affair.

Mr Willcox had no other questions to ask.

Okada Kisaburo, another arbitrator, stated he also examined the velvet with Mr Walter and Ali Chow the compradore. He quite agreed with last witness with regard to the goods. He did remember Mr Walter saying the two first pieces were better than the sample, but then he found it otherwise himself.

Mr Willcox now asked defendant if he had never been sued in the Saibansho on the part of foreigners before, for breach of contract.

Defendant said when he made contracts with foreigners he usually found the goods according to sample, so that there was no trouble of this kind. He had never been before the Court before. There was at one time a claim against him by plaintiffs' old firm, but it was settled amicably.

Mr Willcox said he had heard differently. He believed defendant had entered into some contract with his Chinese compradore who had given him a receipt for bargain money. If so, Mr Willcox asked the Court to discover if defendant now had this document.

His Honour said that from Mr Walter's report and Mr Willcox's own admission it was evident that the goods really differed in colour from the sample.

Mr Willcox said that in Mr Walter's report it was stated that the most of the velvet was fairly up to sample and that two pieces were better than sample.

His Honour said that as it had been shown that there was a difference in quality and colour, defendant could not be compelled with justice to take delivery of the goods. In the document in which defendant promised to pay six day's interest on bargain money and coolie hire, and take delivery of the velvet within six days, this cannot be taken into consideration, for defendant states that he only did this in case he should in the end take the goods.

Mr Willcox asked if the Court did not place any strength upon the statement of himself and his witnesses that defendant accepted the goods, and even prayed for time to get the means which he was in want of?

The Court said it may have been verbally agreed that defendant should take delivery of the goods, but it was not to be noticed in documentary evidence.

Mr Willcox said he had proved this fact and defendant could not himself deny it. It is customary to take a sample piece out of a case for the man to sell upon.

The Court said that in such a case as this, one should remember the commercial standing of both parties, and he hoped for an amicable settlement in most cases. But judgment in the present case could only be given after considering the evidence of both sides and looking at the affair in the most unprejudiced light.

Mr Willcox asked again that some notice be taken of the evidence he had brought forward and proved.

The Court said that justice would be done.

Mr Willcox asked that judgment be given at the earliest convenience of the Court, for as long as the goods remained in the godown it was a losing concern, and they could not be resold till the decision had been given.

Judgment was reserved.

THE CONTRIBUTIONS OF SCIENCE TO MORALITY.

(The Nation.)

The satire, thinly veiled, under Professor Huxley's phrase of the "Miltonic theory" of creation may not improbably have betokened the lecturer's personal attitude of mind towards the hypothesis he was about to confute; an attitude of amusement rather than of serious consideration. To one accustomed to weigh scientific evidence the version of the world's origin resting solely on the authority of an ancient Hebrew Scripture must seem hardly entitled to the courtesy of a refutation, save for the sake of unenlightened hearers. The sentiment is easy to understand; and it is no less easy, we think, to understand the strong revulsion from it, as irreverent and irreligious, of those whose minds have been formed under church teachings of the stricter sort. It should always be remembered, by those to whom such sensitiveness appears at first mere bigotry and folly, that the idea of the infallibility of the Hebrew and Christian Scriptures is to a very large class of minds inseparably connected with the ideas which to them are the supreme sanctions and incentives to morality, and the great sources of consolation and hope. What the infallible Church is to the devout Catholic, the infallible Bible is and has been for over three hundred years to the vast majority of devout orthodox Protestants. And what lends the almost tragic interest to the conflict between scientists and theologians is the fact that the philosophy for which the latter stands, however open to criticism on intellectual grounds, constitutes the basis on which the mass of our population have been trained in the obligations of morality. When the old foundation is cut away what is to take its place? And what room will the philosophy of science leave for such beliefs and hopes as under the name of religion have contributed to the elevation of humanity? Without attempting to answer these questions at large, we think some considerations may be presented which seem well founded and not devoid of encouragement.

Let us for a moment ask what positive contributions to morality—to morality of thought, if we may so say—the scientific habit of mind seems to furnish. It is apparent at once, we think, that it eminently contributes to what may be called the fundamental virtue of the intellect—supreme regard for truth. At every step of his progress the student of material nature is sternly disciplined in the sacrifice of prepossession prejudice—the subtlest and strongest forms of self-love—to the evidence of truth. He must perpetually ask, not what is pleasant, but what *is*. Of the effect of this habit of supreme regard for fact upon intellectual tendencies and systems we do not here speak; we emphasize only the incalculable *moral* value of such a habit

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

And we may add that it develops a side of character, which religious training has hitherto neglected, or even thwarted. In common religious speech "the truth" has come to mean "that system which we ourselves hold to be true." Regard for the ideal truth, readiness to give up one narrow vision for a wider vision, has in effect been frowned upon. And the characteristic crimes of religious bodies—the persecutions and tortures, physical or moral, for opinion's sake, which have been the opprobrium of the historical church—have sprung from this very vice of devotion to one's own belief as intrinsically sacred and rightfully dominant. The class of studies which pre-eminently foster the opposite virtue of love of truth for its own sake; which compel the student to hold his opinions and theories subject always to the possibility of new light, would seem to deserve gratitude as friendly to good morals. And it seems to us that thoughtful religious men, who desire above all else, as the basis of their religion, a true view of the universe—not merely a pleasant view—ought to be grateful to studies which by training the mind to truth serving tend to clarify human vision and so to gain deeper insight into the great realities.

Moreover, perhaps the one definite contribution which scientific studies are especially making to what may be called our higher knowledge of the universe, is the idea which they so powerfully inculcate of unvarying order. Each new discovery emphasizes the fact of an all-pervading unity of plan. It must certainly be accounted a philosophical weakness of the historical forms of religion that they have so largely emphasized the opposite notion, and taught that it is in breaks of the habitual order, in interventions, alternations of defeat and retrieval both in the outer world and in man himself, that the Divine presence is especially manifested. The scientific conception of an unchanging order, a unity of plan in which all things perfectly combine, may well minister to our highest feelings of admiration and awe; may well consist with the worship of a God "in whom is no variableness, neither shadow of turning"; and with the calmest and most reassuring faith in

> "One God, one law, one element,
> And one far-off divine event
> To which the whole creation moves."

It is always to be remembered that the applications of scientific truth made by Huxley and Tyndall do not directly touch—as they would be the first to declare—a vast realm of human interests; do not lie in that world of emotion and purpose, of suffering and achievement, of which Shakspere mirrors a few glimpses, and which makes up so great a part of life. But even into that inner world some of the great leading principles of natural science may legitimately be carried. The law of observation and induction has here too its field. And of what service it may here render to religion we have an example in the talk of a moralist like Matthew Arnold, who insists, on the veritiable grounds of experience and observation, that "conduct is three-fourths of life"; and that life can have no business so important as the cultivation of fidelity, purity, unselfishness, and the other great elements of character.

But after all has been said of the practical contributions of science to morality, the query may be urged whether it throws any light on the great question of a beneficent Power exercising personal care over the individual as well as the race, and responding to the human emotions of gratitude and trust and love. It may well be that science throws no such light, and yet that the recognition and adoration of such a Power may rightfully belong to man in his highest development. All human beings, from a Newton to the child of an hour, hold to and live by many things of which science can give no account. It is hard to believe that it will ever be found irrational or impossible for man to rest in the sense that the course of things is ordered by something higher and better than his own will, and to feel that his true attitude towards the universe is that of trust and hope, as well as energetic activity.

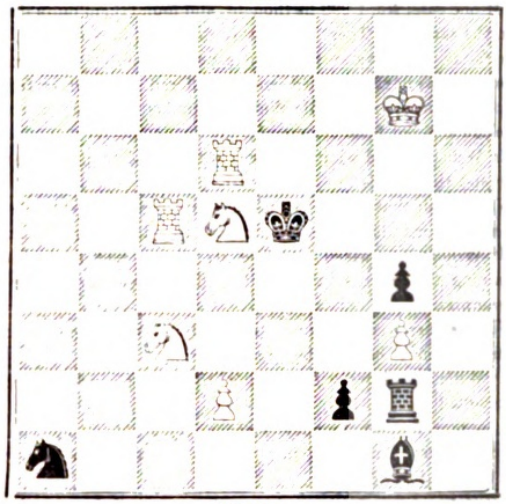
PROBLEM

By the Revd. G. McArthur.

This problem won the prize at a Chess Meeting held at Cambridge some years ago.

BLACK.



WHITE.

White to play and mate in 3 moves.

SOLUTION OF LAST WEEK'S PROBLEM BY MR. F. HEALY.

W.	B.
1. R. to Q.'s R. 7	*a.* K. takes P.
a. Kt. to Q.'s Kt. 6 discovers ch. mate.	
b. Kt. to K.'s 6 discovers mate.	*b.* K. to Q.'s B. 4
c. R. takes P. discovers mate.	*c.* K. to K.'s 5

CHESS ENIGMA

Termination of a Game, by a "Sheffield Grinder."

White: K. at Q. Kt. sq. Q at her 8th, R. at Q. R. sq. B. at K. R. 4th; Ps. at K. R. 3d, K. Kt. 7th, Q. B. 3d, Q. Kt. 5th, and Q. R. 4th.

Black: K. at Q. R. 4th, R. at K. Kt. 3d, Kt. at Q. Kt. 2d, P. at K. R. 4th.

In this position, Black having to play, took the Q., whereupon White mated him in four moves.

SOLUTION OF MR. F. HEALEY'S PROBLEM OF LAST WEEK.

Correct answers received from Shogi; E.J.R.; Tesa and Delta Yokohama, and W. B. M. Tôkiô.

SOLUTION OF MR. LLOYD'S PROBLEM OF 25TH NOVEMBER.

As the Black pieces are on their original squares, and as it is White's turn to move, the Black King or Rook must have changed their position on Black's last move, and according to the laws of chess cannot, in consequence, now castle, therefore White plays Q. to Q.'s R. square and mates next move.

Correct solution received from C. B. Yokohama.

In the position last week from the Westminister Papers, the Black pawn at K. B.'s 4th should have been given as at K. B.'s 5th.

The following is the answer:—

Black plays B. to Q. R.'s 3rd and retains it on the diagonal between that square and his K. B.'s 8th, when all the White pawns must fall if he moves them, and if the King moves, Black's pawn proceeds at once to be exchanged for a Queen.

Sugar.—There has scarcely been any business doing during the past week, owing to holders demanding higher prices than buyers are at present willing to give.

Sugar:—Takao in bag ... ... per picul..	$4 40	China No. 4 Kosh fah ... ... per picul..	$6 00
„ in basket ... ... „ ..	$4 20	„ No. 5 Kosh fah ... ... „ ..	$5 40
Twan fa in bag ... ... „ ..	$4 30	„ No. 6 Kosh ... ... „ ..	$4 50
do in basket ... ... „ ..	$4.10	Swatow Brown ... ... „ ..	$3.40
China No. 1 Ping fah ... ... „ ..	$7 75	Daitong ... ... „ ..	$3 80
„ No. 2 Chong yuk ... ... „ ..	$7 10	Japan Rice	$2 30 to $2 35
„ No. 3 Ke yuk ... ... „ ..	$6 50	Kerosene Oil	Noml. $4 50

Kerosene Oil.—Telegrams from New York dated the 7th instant quote Devoe's Oil at 32 cents, and advise no shipments to Japan. Transactions are few, holders being firm at $4.50.

EXPORTS.

Silk.—The past fortnight has been the dullest of this season. At the beginning of this month business came to an almost complete standstill, and prices having receded $50 to $50, an active demand sprung up which was soon checked by the rising pretensions of sellers and the scarcity of good Hanks.

Since the 25th ultimo settlements are 400 bales of Hanks, and 200 of other sorts. Supplies are falling off and the stock estimated at 3,000 bales is chiefly composed of Oshiu sorts, which at the present rates attract but little attention. The shipments of the fortnight are 448 bales, making the total export since 1st July 16,826 bales, against 8,864 last year for the corresponding period.

	At Exchange 4/4 *on London*	*At Exchange* 5/00 *at 6 m/s on Lyons.*	
Hanks—Best No. 1 & 2	$760 to 800	25 7 to 26 5	82 to 86
„ Good No. 2	$730 to 770	27 11 to 28 8	79 to 81
„ Medium No. 2½	$680 to 710	26 1 to 27 2	74 to 77
„ Common No. 3	$600 to 660	25 3 to 27 5	65 to 72
„ Inferior No. 4 & 5			
Oshiu—Best	$720 to 740	26 10 to 27 11	76 to 79
„ Medium to Good	$650 to 680	25 to 26	71 to 74

	At Exchange 4/4 *on London*	*At Exchange* 5/00 *at 6 m/s on Lyons.*	
Hamatski	$520 to 620	20 4 to 23,11	57 to 67
Kakeda—Extra	—	—	—
„ Fine	$870 to 880	32 4 to 33 4	91 to 94
„ Medium to Good	$780 to 810	29 9 to 30 5	84 to 86
Sodai	$520 to 570	20 4 to 22 2	57 to 62
Filature Silk	$800 to 950	30 5 to 35,11	86 to 101

Silk-worms' Eggs.—Total settlements since the beginning of the season are about 900,000 cards, total shipments 805,000 cards. The anticipation of a considerable fall in prices following the departure of the American mail of 26th November has been disappointed. The unsold stock now estimated at about 250,000 cards is under the control of a Japanese Bank, and prices are still maintained at from $0.80 to $1.50 according to quality.

Tea.—Our market has been a little more active during the past week, settlements amounting to 2,500 piculs, but arrivals having been moderate only, native holders show somewhat more confidence, and prices close a little firmer than ruling during the early part of the week.

There seems some probability of a sailing vessel being laid on the berth for New York, but so far nothing has been definitely settled.

Common	$10.00 to 12.00	Fine	$25.00 to 28.00
Good Common	13.00 to 15.00	Finest	32.00 to 36.00
Medium	17.00 to 19.00	Choice	nominal
Good Medium	20.00 to 22.00		

EXCHANGE AND BULLION.

Exchange.—There has been a fairly large business doing during the past week, with daily advancing rates in sympathy with the advanced quotations from India and China.

Rates close as follows:—

STERLING—Bank 6 months' sight	4s 3⅝d.	On SHANGHAI—Bank sight	75
„ Bank Bills on demand	4s 2⅞d	„ Private 10 days sight	76
„ Private 6 months' sight	4s 3¾d @ 4s. 4d.	On New York—Bank Bills on demand	101

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Help for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 51.] YOKOHAMA, SATURDAY, DECEMBER 16, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which may result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 14th December, at No. 3 Bluff, the wife of A. J. WILKIN, of a daughter

Notes of the Week.

The agrarian riots reported during the week have been serious. They may, we presume be traced to two principal causes; the first, the obligations of the farmers to pay a fixed tax in money for the produce of their lands, instead of a fluctuating tax depending upon the yield of the year; and secondly, to certain alterations which have been made in the land tax. We know too little of the economy of the interior of Japan to write with any certainty on these subjects, but it may be presumed that this obligation to pay the land-tax in money presses severely on the farmer when rice is low, as it is at present. More than this. It is obvious that in order to convert the rice into money, he must send it to some neighbouring town for sale, and if this is done by a large number of men at the same time with the same object of early sale, the price must be unnaturally depressed. Could not this be remedied in some manner by an extension of the time during which the money may be paid, the rice meanwhile being either stored by the Government, as formerly, or the official in charge of a district taking a lien upon it to be subsequently redeemed? The change in the mode of levying the tax from payment in kind to payment in money, was a good one, but it has its own difficulties and disadvantages, and they appear to have caused discontent this autumn. Everything possible should be done to make the change fall as lightly as possible, and in a country so deficient in roads as Japan is, sudden local accumulations of produce of any kind must have a most depressing effect upon its value. What may be the changes in the land-tax complained of, we have been unable to discover.

We had some intention of laying before our readers certain occurrences of the year 1872, and the comments we then made on them, in justification of the terms in which we spoke of Mr. Peshine Smith in our last issue. But the occurences themselves were so lamentable and humiliating, and our own strictures upon them so severe though quite deservedly so—that we think it better to withhold them. It may be well to state, however, that they will be found in the issue of the *Japan Mail* of the 24th January 1872, and were suggested by Mr. Smith's appearance in the American Consular Court to answer a charge of non-registration as an American citizen. An immeasurable scorn is apt to overleap the bounds which reflection, not so seasoned, should preserve, and, while we have not a word to retract, we shall admit that it would have been more generous to bury those deplorable memories when Mr. Smith left this country. But the injury done by this person to every foreigner in Japan, would justify all and more than all we ever said while he was here or since his departure. His formal abjuration of his own nationality, his habitual appearance in Japanese dress, decorated with the swords which the Japanese themselves discarded directly they began to understand what condition of civilization the wearing of them implied,—these and matters to which we shall not here refer were the causes which provoked us to the expressions we used then and recently.

In regard to a letter on this subject written under the initials E. P. S. which we have every reason to believe feigned, it may be sufficient for the present to say that such enquiries as to the name and address of the writer as we had the fullest right to make, have not as yet met with a satisfactory response.

The bearing upon the extra-territoriality question of the sentences passed on Mr. Nakashima and Mr. Nagai, has been made the subject of an article in the *Ukiyo no Shimbun*, a translation of which will be found elsewhere. The writer argues that the contradiction of an unfounded statement, required by the 11th clause of the Press laws, was duly made in a succeeding number of the journal; and that the original statement was regarded as proof of guilt, while no value was attached to the retractation of it. This clause of the Press-laws provides that refusal to correct an erroneous statement is punishable; but, in this case, there was no such refusal, and the law of libel was thus brought to bear upon the two editors. The writer further contends that in the not unfrequent cases where the government supersedes one notification by another, the former is held to be cancelled, and he applies this analogy to the case of an erroneous statement made in a newspaper and subsequently withdrawn. With much skill he argues that so long as cases of this kind can be cited, the opinion of foreigners will be expressed against all attempts of the Japanese Government to bring them under its jurisdiction. And he is perfectly right, as we showed last week. The Government may have the most perfect code of laws in its hands ever compiled by the ingenuity of man, laws embodying the wisest and most liberal views of the greatest jurists the world has known in this its ripe age. Yet they will avail nothing, and, it may be well assured, they will not impose on the foreign public. They will be regarded as a noble organ in the hands of men who do not know the gamut and have no conception of the principles or practice of music. The Japanese Government has yet to understand and realize its position on this question. It has been utterly deceived by men whose interests lay in deceiving it, and so long as it listens to them, extra-territoriality jurisdiction in the present condition of Japan or any condition which can possibly be brought about by the wisest legislation during many years, is not a question of western choice, desire of domination, harshness of disposition, or want of sympathy. It is a necessary condition of mutual intercourse, and, the misfortune is, that every year of this intercourse confirms Europeans in the conviction that the condition cannot be dispensed with. We would willingly write otherwise, but it is impossible, and it is well the Gov-

Original from UNIVERSITY OF CALIFORNIA

ernment should know that nothing has so forcibly impressed this conclusion on the minds of foreigners during the past eighteen months, as the administration of these very Press-laws. Formerly, the few who knew Japan well were the chief exponents of this view. Men came from Germany or America or even from England, and were disposed to think that the condition might safely be relaxed here and there, and every encouragement given to the Japanese to hope that some system or another might shortly be devised for untying or cutting this terrible knot. But as our experience of Japan increases, so does this flattering and desirable prospect recede. The rudiments hardly yet exist in the Japanese mind, and do not yet exist in Japanese law, of the principles on which European law and systems of legal procedure repose, and the western nations will not listen to any proposals to place their subjects or citizens under a code of alien laws, for the just administration of which there is and can be no guarantee. Few Japanese have yet learned that the whole plane in which the mind of this country moves is almost immeasurably below that in which the European mind moves, and until the distance is vastly reduced which now separates the one from the other, there can be no question of the excision from the treaties of the special jurisdiction clauses.

We cannot congratulate the foreign residents of Shanghai upon the address they presented to Sir Thomas Wade on the occasion of his departure for England. Its diction is laboured, stiff and clumsy, its general tone and spirit are fulsome to the verge of unmanliness, and in view of the grave dissatisfaction with which the British community at Shanghai, and indeed throughout China, has regarded the policy pursued and the attitude assumed by our Minister at Peking during the last seven years, it is wholly unworthy of the occasion. Whether Sir Thomas Wade or the merchants form the more just estimate of this policy and attitude, we shall not here pretend to decide. We only allude to a wide divergence of opinion between them which has notoriously existed, and which was simply factious on the part of the latter if the extravagant compliments of their address are held to mean anything. Of course when men part under such circumstances as those which marked the late occasion, it would be unusual and in the worst possible taste to say a number of ungracious things which could do no good and must necessarily cause pain. But this is no argument for a prostration which abandons every point of contention, and reduces all future possible expression of dissatisfaction to so much evanescent grumbling which a Minister may safely and wisely disregard. The whole thing was overdone. If the Minister merited the address presented to him, the whole of the dissatisfaction expressed at his policy during the past seven years, and especially lately, constitutes a grave reflection upon the public and the organs of public opinion. If he did not merit the address, one of a different character should have been presented to him—one equally agreeable to him as a man leaving a large number of old friends, but studiously ignoring the points on which he has been so much at issue with public opinion, or merely glancing at them in such a manner as to show that though the difference of view existed, the moment of the Minister's departure was not an opportune one for making adverse reflections upon his policy. We all know that Sir Thomas Wade is a high-minded and able man, painstaking and indefatigable in the discharge of his duties. But every public man knows that he is liable to the free expression of public opinion, and that this must sometimes, whether more or less justly, go against him. It is the penalty paid for high position, and it is not a very severe one when the Press is in the hands of men who express their opinions like gentlemen about gentlemen. If the truth must be told, we receive all our compliments for Sir Thomas [illegible] address, which was as graceful [illegible] be—as opposite to the event [illegible] character. He [illegible] which I [illegible] addressed him, [illegible] ing all [illegible] that most [illegible] intentionally or not—every point of difference between himself and them.

Dr. Dennys has come forward with a short rejoinder to Sir Charles Dilke's article in *Macmillan's Magazine* on the subject of English Influence in China, nor are we surprised to find that the same superficiality and tendency to hasty generalisation which we remarked in Sir Charles' article on Japan, should be found in rich veins in his essay upon China. Dr. Dennys proves very conclusively that most of the imputations thrown by Sir Charles upon the China merchants have no foundation in fact, that most of his conclusions are very wide of the mark, and that the assertions on which he perches with as much airy satisfaction as if they were truths strong enough to support him, are unverified and unverifiable. Here is an instance:—

The "mendacious telegrams from China, which during some years weekly murdered missionaries, or insulted ambassadors, in the innocent columns of the English papers," form the next subject of Sir Charles Dilke's diatribe. As he does not deem it necessary to give any example of the telegrams in question, it is somewhat difficult to disprove their mendacity; but inasmuch as the writer of this paper drafted a large number of those transmitted to Europe, especially during the negociations regarding the Audience Question, he will not perhaps be thought quixotic in challenging Sir Charles to produce one single telegram which was "mendacious" or which, *except as altered by the telegraph officials in transmission*—alterations for which neither Reuter's agent nor the writer was responsible—was not in accord with actual fact. It may be further added that except in very few cases the telegrams passed through untampered with, and that the additions or alterations made by their recipients were, in most cases, of the most innocent nature. Republished, as most of them were, in a special organ devoted to Chinese matters, they seldom escaped the attention of the sender; and though provoking mistakes were made in the names of persons and places, nothing was ever detected to justify particular remonstrance. As regards the sender of the Shanghai telegrams I am unable to say whether he had, or had not, graver cause of complaint. But I can recall only a few instances of inaccuracy, and none of "mendacity," in those which appeared in the London journals. So much for the second ground of Sir C. Dilke's "prejudices" regarding matters in China.

Upon the Transit Dues Sir Charles Dilke writes with much indignation, and would make it appear that the demands of foreigners resembled demands which might be made by foreigners in England to be exempt from the tolls on carriages paid by British subjects. It is hardly necessary to say that this is a mere unfounded assertion, and the curious thing is that any one should imagine that a body of men like the China merchants should make or harbour the idea of such a monstrous demand. The real fact is that the Transit Due system, which is a matter of treaty regulation already, simply provides for the payment in one sum at any given port of a number of ex not charges, often arbitrarily increased, and as systematically evaded by the natives themselves as their ingenuity can devise.—Sir Charles conveys an equally false view of the extra-territoriality question, on which, in one short sentence in his essay on Japan, he struck on a rock and made utter shipwreck of his reputation as a man qualified to deal with the most difficult of all the questions connected with the relations between the Governments of the West and the extreme East. Dr. Dennys has handled his subject with the ease of a practised writer and the advantage of long experience of China and the Chinese, and while he does justice to such of Sir Charles Dilke's views as are solidly based, he reduces the bulk of them to their true value—or, in other words, sinks one at each shot.

The *Japan Herald* showed in a recent article that torture was still threatened and resorted to in Japanese Courts, in spite of an edict issued by the Prime Minister which could only be interpreted, as it appeared to us, in the sense that for the future torture was abolished, and [illegible] full explanation we satisfied us amply that it is still resorted to. The [illegible] is therefore directed to the Japanese [illegible] element and people [illegible] [illegible] [illegible]

But if we mistake not, some congratulations were offered to a jurist attached to the Japanese Government, as having been the happy instrument of removing this blot from the proceedings of the Law Courts, and were accepted with becoming and modest expressions of thanks. How can this discrepancy be explained? It is of high importance that the public should be enlightened on this point, as nothing can be worse than that any misgiving should exist in regard to a matter of such serious moment.

From the "Japan Mail Daily Advertiser."

Monday, 11th.

The O. & O. Company's steamer *Oceanic* arrived in port at 6 o'clock yesterday morning, having made a splendid run from Hongkong in 5 days, 14 hours and 40 minutes. For fifteen consecutive hours towards the end of her passage she made 16 knots an hour.

From the *Akebono Shimbun.*

The *Naimusho* has given orders to the various *ken* in the south that enrolled an extra number of police constables during the late troubles, that such extra forces can now be disbanded, as tranquillity having been restored the services of the men are no longer required.

From the *Hôchi Shimbun.*

Messrs. Ariyoshi, the editor, and Sasajima the manager of the *Tokka Shimbun* (who are now both in prison for a violation of the Press-laws) were summoned to the *Saibansho* on the 5th instant and there examined about articles which appeared in Nos. 16, 17 and 18 of the issue of their paper.

Tuesday, 12th.

From the *Nichi Nichi Shimbun.*

His Majesty the Mikado will attend the *Genrô-In* in a few days to personally close the session for the year. The Foreign Ministers will be present by invitation.

From the same.

As the trial and condemnation of the southern insurgents was completed on the 3rd instant, Mr. Ogi, Minister of Justice, will proceed to inspect the various *Saibansho* in Shikoku and Kiushiu before returning to Tôkiô.

From the *Hôchi Shimbun.*

At 2 20 a.m., on the 10th instant a fire broke out at Hakozaki-chô, Tôkiô, by which 13 houses were destroyed.

From the same.

Another newspaper, to be called the *Seikiô Shibun*, will very soon make its appearance in Tôkiô.

From the same.

It is reported that severe famine prevails in Corea, and that the people have not enough seed rice left for the next year's crop.

From the *Chôya Shimbun.*

The new building for the *Naimusho* has been completed, and will be opened about the 17th instant.

From the same.

The office of the *Akebono Shimbun* has been removed to No. 7, Ginza Shichôme, Tôkiô.

From the same.

Another newspaper, to be called the *Meiji Shimbun*, is about to be published at Tôkiô.

From the *Osaka Nippô.*

Premises for a Fifth National Bank are to be built in the Tochiuri-bori, Osaka.

From the *Akebono Shimbun.*

The Yamaguchi outbreak having been entirely settled, a *Sanji* of that *ken*, named Sakai, has arrived at the capital to give information of the precise details of the whole affair to the Government.

From the same.

We hear that the students of a private school in Kagoshima *ken* are greatly increasing, and that there are now about 15,000 of them altogether.

From the same.

A telegram from Ibaragi *ken* states that the riotous farmers who have gathered together at Tsukuba-yama, numbered 3,000 on the 7th instant.

The Occidental and Oriental Company's steamer *Oceanic* left for San Francisco early this morning, taking 500 bales of Silk and the following cargo of Tea:—

TEA:

From	San Fran.	N. York.	Other Cities.	Total.
Shanghai	—	19	979	998
Nagasaki	—	—	332	332
Hiogo	—	1,193	750	1,943
Yokohama	5,670	2,360	783	8,813
Hongkong	200	—	523	725
Total	5,870	3,572	3,369	12,811

Wednesday, 13th.

We learn from the *Hôchi Shimbun* that thirty-six of the farmers concerned in the disturbance in Ibaraki *ken* have been arrested, but the great body of them are still riotously disposed and it is feared may yet be a source of great trouble to the authorities. *Naimusho* officials and a force of police are being sent to the disturbed district from the capital. The *Chôya Shimbun* says, also, that on the arrival of the troops from Utsunomiya the rioters dispersed, but some have since assembled at Ota, where they have been joined by some *samurai* of Shimotsuma. Two policemen are reported to have been killed by the rioters.

From the *Chôya Shimbun.*

The Prime Minister, accompanied by the Chiefs of various Government Departments, visited the *Shihei-rio* (Paper Money Department) on the 11th instant, as all the machinery has how been set up in the new building which has been specially erected for it.

From the *Akebono Shimbun.*

The closing of the session of the *Genrô-In* will take place on the 20th instant.

From the same.

There are fifteen of the Hagi insurgents still at large, for whom a diligent search is being made. When arrested they will be punished in a similar way to their companions in rebellion who have already been tried and condemned.

From the *Nichi Nichi Shimbun.*

The sentences of imprisonment with hard labour passed on the bulk of the southern insurgents varied from 100 days to 10 years, and some few were even sentenced to hard labour for life.

From the same.

Some officials of the Bureau of Agriculture are to be sent to America for the purpose of purchasing some 80 head of cattle.

Thursday, 14th.

The *Chôya Shimbun* reports that a skirmish took place at Ishidzuka-mura on the morning of the 10th instant between the riotous farmers of Ibaraki *ken* and the *Kencho* officials assisted by some *samurai*, in which some 1,000 farmers were engaged against 250 of their opponents. The result of the conflict seems to have been doubtful, as both sides retired from the scene of the struggle, the former leaving 10 dead, and the officials having six of their side placed *hors de combat.* The rioters are now divided into two bodies, one of which has proceeded towards Mito, and the other taken up a position on the Nakagawa. Preparations are being made by the officials to suppress the riot, for which purpose the troops have again been summoned from Utsunomiya, as, strange to say, the force which was called out at first to quell the disturbance returned to garrison again on the 8th instant. In addition some 50 police constables and 3 sergeants have been despatched to Ibaraki *ken* from Tôkiô. There is a report that the farmers of Gumba *ken* show signs of an intention to join their neighbours in this outbreak.

From the *Nichi Nichi Shimbun.*

On the 7th instant a fire at Niigata destroyed some 50 houses.

From the same.

For the last week work has been actively carried on day and night at the *Shihei-rio* (Paper Money Department).

From the same.

At 2.30 a.m. on the 12th instant a fire broke out at Honami-chô, Osaka, which destroyed 35 houses.

From the *Hôchi Shimbun*.

A special prison is to be built at Nemuro, Yezo, to which, when completed, the insurgents lately condemned to various terms of hard labour will be sent.

From the same.

As 500,000, bags of rice are to be exported next year, Mr. Shibusawa, the director of the Mitsui Bank, is now purchasing rice at Ishinomaki in Sendai at from *yen* 2.30 to *yen* 2.80 per bag.

Friday, 15th.

Just as we are going to press the P. & O. steamer *Bombay*, with English Mails on board to the 27th October, has arrived at the anchorage. We shall issue an extra with the telegraphic news brought by her.

The news from Ibaragi *ken* is conflicting. We last heard that an engagement had taken place between the officials and the rioters with a doubtful result, and that in consequence troops had been called out from Utsunomiya to take active steps against the farmers. We now learn from the *Chôya Shimbun* that it was the intention of the Government, in answer to a telegraphic application, to send a military force from the capital on the 12th instant to quell the disturbance, but further telegraphic information having been received that the ringleader of the rioters had been arrested, this order was countermanded.

From the *Nichi Nichi Shimbun*.

Of the Kumamoto insurgents who were recently tried and, condemned four were sentenced to hard labour for life, eight for 10 years, one for 5 years, one for 3 years, and twenty-one for 2 years.

From the same.

Mr. Fukushima, Japanese Consul at Amoy, will start for that port on the 20th instant.

From the same.

Five officers of the Army Department have gone to Ôshiu to-day for the purpose of purchasing horses.

From the same.

The Tôkiô *Fu* has determined to appeal in the case of the Tôkiô *Fu vs.* J. M. Batchelder, as it will not accept the judgment recently given. The U. S. Court has already granted the appeal.

From the same.

Mr. Obana, of the Geographical Department, accompanied by other officials, will proceed to the Bonin Islands on the 16th instant.

Saturday, 16th.

We yesterday published a translation from the *Nichi Nichi Shimbun* which stated that the Tôkiô *Fu* had already appealed against the U. S. Consul-General's decision in the case of Tôkiô *Fu vs.* J. M. Batchelder, and that the appeal had been allowed. This is not a correct statement of the case. The Plaintiffs have made a motion for a new trial, and have been granted twenty days by the Court to show cause why the case should be reheard.

We have been favoured by the Agent of the P. & O. Company with a schedule of arrivals and departures of the Company's steamers for next year. With a consideration seldom shown by public bodies, the Directors have, with the sanction of the Postmaster-General, altered the date of departure of the next mail steamer from this port from the morning of the 26th instant to daylight on the 27th instant, so as not to interfere with the enjoyment of Christmas holiday by the residents here.

The M. M. steamer *Tanais*, with French Mails on board to the 5th November, will leave Hongkong to-day, the 16th instant, at noon.

From the *Akébono Shimbun*.

Since the capture of the leader of the riot in Ibaragi the farmers have, we hear, entirely dispersed.

From the *Hôchi Shimbun*.

A fire broke out a Kakigara-chô, Tôkiô, shortly after midnight on the 15th instant and destroyed five houses.

From the same.

The school wherein foreign languages are taught at Sendai was recently burnt to the ground.

From the *Nichi Nichi Shimbun*.

Our editor, Mr. Hokiyama, returned to his office yesterday after undergoing his second term of three months imprisonment, and he informs us that there are 31 men now in the prison he has just left on account of offences against the Press-laws.

From the same.

Mr. Ôgi, the Minister of Justice, returned to the capital yesterday, and presented himself at the *Sei-In* shortly after mid-day.

From the *Chôya Shimbun*.

The families of the police sergeant and the constable who were killed some time ago at Kowami-chô, Tôkiô, by armed *samurai*, have received 100 *yen* each as compensation, and 50 *yen* for funeral expenses, while another police constable who was severely wounded on that occasion has received a present of 100 *yen*.

From the same.

Mr. Isaka, the editor of the *Futsu Shimbun* published in Awa, has been sentenced to 3 months imprisonment and a fine of 25 *yen* for publishing a statement about a society in that province called *Jijosha*.

From the same.

We hear of extensive forgeries of paper money and coin being effected at Hakata, in the Fukuoka *ken* (Chikuzen).

Natives are beginning to consign silk; the present mail takes four hundred bales on account of the Chinese. The news from home is about as bad as it can be; a panic is reported on both the London and Lyons markets; as the season advances people become still more eager to realise their stocks, and there is a general stagnation in demand. The rapid rise which took place in the earlier part of the season seems to have induced speculation among all classes, which, unfortunately for legitimate traders, has utterly demoralised the market; the head cook at one of the big hotels is the proud possessor of two thousand bales, and with such weak holders it is not surprising if disastrous falls take place. The Chinese, after holding on to their stocks so bravely and so long, have at last succumbed, and a decline of about Tls. 150 per picul may be quoted, from the highest point. With an unsold stock of some twenty thousand bales, and the eagerness of Chinese to realise in view of the approaching new-year, we may expect to see much lower prices and a firm exchange, for some time to come.—*Shanghai Courier*.

THE GOVERNMENT AND THE PRESS.

OUR views regarding the Press-laws, and the necessity for them, are in no way changed. We complain only of the way in which they have been administered, and the injustice which has been perpetrated under cover of them. We cannot consider the code a harsh one, and we have not yet seen one single important organ of public opinion in Europe which did not distinctly avow the necessity for some such method of regulating the expression of public opinion. What we conceive to have been the error of our opponents throughout is the supposition that a country with such antecedents as Japan could bear a free press in the present stage of its existence. Such error as we may have ourselves taken into has arisen solely from too hopeful views of the manner in which the code would be administered. But what is our obvious duty under such circumstances? To denounce the Press-laws? Surely not. The question as viewed by our opponents is between press-laws and no press-laws, and they decide for an absolute freedom. As viewed from our side it is a question between a harsh and arbitrary administration of the Press laws, and one worthy of a Government which ought to be bound by the Mikado's proclamation at the time of the Restoration. The essence of that proclamation was that the administration of the government should for the future be more in accordance than formerly with the expression of the national will. The essence of our complaint is that that expression is unduly repressed—not by the code, but by the manner in which it is enforced. Turn to to the *Pall Mall Gazette*. In a recent article entitled 'The Future of China and Japan,' it touches this question of the Press-laws. And how? It says:—"In a semi-civilized state, where there is much "sympathy among the few with American democracy, "and a headlong tendency towards change everywhere, "the danger of a free circulation of crude and unsettling "opinion is unquestionable. The Japanese may well have "got into some difficulty, therefore, with their Press-laws. "Such fundamental changes as the last few years have "seen in Japan cannot have been made without disturb-"ing the minds of the people. There has been a sudden "shattering of the old landmarks of social order, &c." Take again an incidental remark made by Mr. MOSSMAN in an excellent speech lately made by him on the subject of education. Amongst the delusions to which he says men are often subject who do not study and take comprehensive views of history, and specially of ancient history, is this one:—"to suppose, for instance, that life in the East is subject to the same sort of conditions, and will be benefited by the same sort of 'reforms' as life in constitutional England." This hits the blot of all these arguments for a free press in this country by which our own contentions for the necessity of Press-laws have been opposed. Men would have the ripest fruit of freedom before they have actually planted the slow-growing tree which produces it. Is this practical wisdom?

But when it comes to a harsh administration of the Press-laws, the question is removed from the sphere of speculation. Let us take the case on which we commented last week. Let us suppose that there was some necessity for rebuking the tendency to make unverified statements regarding men in high office—as in the case of KIDO in reference to MAEDARA's execution. All that the newspapers did was to give currency to a report floating about in the capital—in other words saying what all the world was saying. The report was untrue and was immediately denied. We have contended that this was enough, and still think so. But, presuming that it was well to teach greater care by inflicting a fine, why imprison the two editors for three months? Think for a moment what this means. Disgrace, the privation of liberty, the temporary severance of home ties, association with criminals, hard fare and lodging, no amusements, no books, and a hundred discomforts and sources of exasperation. Is there any relation between the amount of harm done and the punishment? Is there any semblance of justice in such a sentence? Surely, surely, not.

We think, too, that the whole attitude of the Government is unsound on this question from the point of view of practical statesmanship. The mind of the nation is fast expanding under a thousand influences which it is impossible and would be undesirable for any Government to attempt to control. Thousands of men are reading English books, magazines and newspapers. Many are abroad, coming daily into contact with Europeans and Americans, and imbibing from them in some form or another extremely liberal views in regard to the true functions of governments, and the great importance which it is to a rising nation to admit as free an expansion as possible of its mind. It may safely be predicted that these influences will gradually modify the whole body of ideas which the Japanese entertain regarding the reciprocal relations of governments and people, and therefore it seems to us in a high degree unwise to embitter the minds of the more advanced section of the community against the ruling class, as the action of the Government is now assuredly doing. That the Government may, to some extent, wisely direct the intellectual movement of the country, is probable, but that it should seek unduly to control a moderate expression of it, cannot be sound policy. It is certain that much of the more active thought excited by the influences referred to, must occupy itself with the problems of domestic politics. The Japanese will not read the history of France, of England and America and retain the content they may formerly have felt with their own form of government. The desire shown during the past three years, though somewhat torpid at this moment, for some organization by means of which the will and feelings of the people may more effectually be brought to bear upon the management of the national affairs, will revive at intervals and each successive time with greater force and energy. The views will be clearer, the desire, will and power to enforce them stronger, and therefore the necessity for some attention to them greater. Will public opinion, unduly repressed and bitterly exasperated, express itself the more or the less wisely under these circumstances? Will not the recollection of past grievances deflect its power of judgment, and passion distort the conclusions of reason? We greatly fear they will, for the memory of injustice lives long. The Government deserves all praise for the attention it has paid to the education of the nation. But it is blind to the inevitable results of all this educational effort? What is one of the most patent results of it? The springing up of multitudes of newspapers in all directions, containing no doubt much that is very weak and worthless, but also much new intellectual matter which the assimilative power of the national mind will convert into intellectual blood. Is there no danger of fever attacking this if the body through which it flows is irritated and inflamed by constant treatment such as that to which we have drawn attention? The Government may feel itself strong, but the true strength of governments lies in the affection as well as the respect of their subjects, in the conviction that it does equal justice to all, and permits no

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

departure from the even course of law. Is this impression being now produced on the minds of the people? These sentences against the public writers are now published far and wide. Will the people be better disposed towards a Government which treats the expounders of their views and feelings with injustice? Will they not rather make common cause with them, and then where is the basis of affection and respect on which the strength of the Government ought to repose?

METEOROLOGY IN JAPAN.

A SHORT but very excellent little non-official pamphlet has lately been issued by Mr. JOYNER, of the Meteorological Department, Tôkiô, which demands a few words of comment.

Of late years the science of Meteorology has been pursued with great ardour by the leading nations of the world, not only on account of the value from a commercial point of view of the conclusions deduced from it, but on account of their economical and other practical value. It is a science, however, which cannot be pursued in a laboratory or observatory like Chemistry or Astronomy. It obviously demands the comparison of a vast number of observations made by many observers over the whole surface of the earth, and thus the results obtained from it are more or less accurate and trustworthy according to the quantity and nature of the data supplied from many quarters. And, from time to time during the past few years, several communications have been made either directly or indirectly to the Government of this country with a view of prevailing on it to assist in this important work. The only meteorological observations hitherto made in Japan on a large scale have been those taken at the lighthouses on the coast, and it is to be regretted that these have proved very misleading in their results, owing chiefly, we imagine, to the want of regular scientific training in the light-keepers. It is now desired to make these observations with greater accuracy, in order to supplement the records taken in other parts of Asia, and for this purpose it is necessary to have stations in various places throughout the Empire where observations on one uniform plan may be made under the care of observers properly trained at the chief station in Tôkiô. Less than this will be useless for the purpose contemplated.

As the value of an establishment of this nature is not at once apparent, and no incentive should be held out to the Japanese Government to embark in mere speculative projects, which, however interesting in the additions made by them to our knowledge, are not of themselves practically useful, it is important to show its bearings on the economical progress of the Empire.

The chief use to which the meteorological conclusions worked out in England have been so far put, is that of giving timely warning of approaching gales, and by this means the loss of life on our coasts has been much reduced. So successfully are the data from the subsidiary stations now generalised, that 76.2 per cent of the warnings have been justified by the events, and it is confidently hoped that this proportion may increase steadily with the advance of the science. Next, there is an important connection between atmospheric and climatic phenomena and the changes and various forms of disease, so that a correct appreciation of the effect of atmospheric changes is requisite for anything like a perfect system of medical practice and may greatly assist an imperfect one. Meteorological science also is of high importance in its bearing upon the practical working of many other professions, notably on engineering, surveying, architecture, etc., all of them involving operations in which it is of high importance to take the phenomena of nature into account. Mr. JOYNER refers to this fact in the following paragraph as well as in other parts of his pamphlet.

> The connection again between atmospheric changes and the explosion of fire-damp in mines, has long been but imperfectly known. In an able paper, read recently by Messrs. Scott and Galloway before the Meteorological Society of Great Britain, it was shown that out of 314 recorded explosions in 1872, 58 per cent. were due to changes of barometric pressure and 17 per cent. were due to a sudden rise in the thermometer. The result shows that the explosion of fire-damp is related mainly to the condition of atmospheric pressure, and that a careful watch over the barometer is above all thing necessary for those engaged in mining operations.

The International Meteorological Congress which assembled in Vienna in September 1874, prescribes very minutely the organization necessary to secure the ends in view, and Mr. JOYNER gives a short summary of its recommendations in this respect.

In its issue of 3rd August last, *Nature* has the following remarks upon the observations already made by Mr. JOYNER for the Survey Department, which, until lately, was under Mr. MCVEAN'S control. These observations were regularly published for some time in the columns of this journal, but the expense attending their appearance was out of all proportion to their value to the general public and the publication of them was therefore discontinued.

> Each of the numbers of Mr. McVean's publication gives the tri-daily observations of the various meteorological elements for five days, beginning with December 2, 1875, with the means and extremes for each of the five-day periods. The observations and reductions of each sheet have been made with great fulness and discrimination, and we hope Mr. McVean will soon be in a position to extend his system of observation to more places than Tokei, so as to give the data for the determination of the meteorology of Japan, which, from its relations to the continent of Asia and ocean currents, presents many points of great and peculiar interest.

And, in order to show the interest which attaches to statistics of this nature in the scientific world, we may mention the attention publicly called in *Symons's Monthly Meteorological Magazine*—a periodical of standard reference—to the valuable tables of Meteorological observations made in Yokohama from 1863 to 1869 inclusive, by Dr. HEPBURN, presented to the Asiatic Society, and published in this journal on the 27th June, 1874.

The organization of such a department as is recommended by the Vienna Congress would not be difficult and need not be expensive. The value of the observations made by Mr. JOYNER has already been fully recognized, and under the superintendence of an observer so skilful and indefatigable as he, results might be obtained of great practical value to Japan and of high interest to the world at large.

News comes from Peking to the effect that of the three mandarins under capital sentence at Foochow for fraud in the purchase of foreign material of war, one only will be beheaded. The other two are to be in life-long penal servitude. The estates of these three officials have been confiscated. A fourth official who has been also accused of fraudulent purchase of foreign arms, has made good his escape to either Australia or California, to the great vexation of Ting, who wanted the man urgently as being the worst of the lot.—*Shanghai Courier.*

A Trading society is being formed in Japan for the purpose of trading with China, and it is said some special privileges or immunities will be granted by both nations. There is room for a large trade in timber, spars, planks, sea-weed, copper, coal, etc., in exchange for which China will give sugar, hides, horses, mules, donkeys, sheep, wool, and many other articles, including medicines. It is said the company will begin its operations early in the coming year.—*Shanghai Courier.*

SPIRIT OF THE JAPANESE PRESS.

The Administration of the Press-laws in its Bearing upon Extra-territoriality.

(*"Akebono Shimbun," 12th December.*)

Mr. Nakajima, the editor of this journal, and Mr. Nagai, the editor of the *Yoochi Shimbun*, were both recently sentenced, as the public are aware, to three months imprisonment and a fine of twenty *yen* for violating the first and fourth articles of the Law of Libel. The *Japan Mail* took the question into its hands and discussed it in an article published in its issue of the 9th inst, contending that while such occurrences as this are possible, it is monstrous to expect that the Japanese Government can be entrusted with jurisdiction over foreigners. Now, had this question solely regarded Mr. Kido or ourselves, we should have made no further allusion to it, but seeing that it extends as far as the question of extra territoriality, we cannot keep silence upon it because it has a most important connection with our rights as a nation. We must strain every faculty to dispel from the minds of foreigners the objections they entertain to coming under our jurisdiction.

(Here follows a translation from the "Notes of the Week" in the Japan Weekly Mail of the 9th inst. regarding the case of the editors of the Akebono and Yoochi Shimbun.)

Our Government has been carrying out extensive reforms, and notably in our laws, one of its main objects being to bring foreigners under its jurisdiction. But we now find foreigners writing in the above manner, and thus hindering the Government in the pursuit of this cherished wish. And as the strength of this contention lies in a mistake committed by our editor, it is clearly our place to take up the question and cut such arguments into shreds.

But there is one great obstruction to stay us, and that is, that we have ourselves no clear understanding of the case on which we are called to think so suddenly.

We all know that our editor has been punished for violating the laws of our nation, yet there is something in relation to his sentence which we cannot understand, and for want of this we are unable to argue the case against the *Japan Mail*. We hope therefore that the public will favour us with such recommendations as will enable us to deal with a case which is at present extremely obscure.

Hitherto, when an erroneous statement was made by a newspaper, and it was corrected in the succeeding issue, the first statement was, as it were, erased from the journal altogether. And when the *Dosho Kioku* Bureau of Censors informed us that Mr. Kido had made a denial of the statement we had published, our editor, in No. 935 of our issue, immediately stated that he had been in error.

The Minister of Justice some time ago notified that all published matter would be regarded as proof in the judgment of cases of this nature. But the correction of his error by our editor was not so regarded, while his former statement was. Now the cases in which the Government has made mistakes in its notifications have not been infrequent, and when a second notification is issued correcting a former one, people are supposed and quite naturally - that the first notification is cancelled and regarded as null and void. It would seem, however, that the correction made by a newspaper is not so accepted. But the 11th article of the Press laws distinctly states that "If in any newspaper or magazine "any public office, company or private individual is mentioned by "name, the newspaper or magazine must publish in their next "issue after receiving it any explanation or correction which such "public office, company or person may furnish to them;" and this clearly means that the correction is supposed to embody the truth, while the former statement is to be regarded as erroneous and is thus withdrawn. Why then is a correction coming from so important an office as the *Dosho Kioku* not accepted as proof? Moreover, all that our editor stated was that a rumour was current that Kido had memorialized the Throne in favour of the execution of Mayehara. Now Mayehara has since been beheaded, and if the action of our Government in this matter was just, as it is generally held to be, our supposition had at least some foundation, even though Kido did not so memorialize the Throne.

Was Kido a friend of Mayehara's, and was this the reason why he made this denial? No: he is not a man who would place his feelings in regard to one man in opposition to his duty to the public.

How, then, can it be contended that we have violated the Press laws? This is quite incomprehensible to us. We admit that the inability to understand it is due to our own want of talent, and to the eyes of others there may be some clear reason showing how we have violated the Law of Libel. Yet as such reasons are altogether unintelligible by us, we trust the public will point them out to us, for then we shall be able to argue against the article in the *Japan Mail*. But while this remains dark to us we cannot defend our national rights. It is, of course, a matter of grave reflection against this journal that the error it has made should become an obstruction to the realization of cherished wishes on the part of the Government, and as all this has a serious bearing on our national rights, we sincerely hope we may be favoured with some explanation.

The Tokiô *Fu Versus* J. M. Batchelder.

(*"Nichi Nichi Shimbun,"* 11th December.)

We have neither a very advanced knowledge of law, nor of the proceedings of courts of justice. But when we examine into the justice of the judgement pronounced by the American Consul-General on the 4th instant, in the case of Tokiô *Fu* versus Batchelder, we cannot preserve silence.

Since the publication of the above judgment in the foreign newspapers of Yokohama, varied comments have been made upon it and it seems that the general public are yet undecided as to whether it is just or otherwise.

The American Court is one which is considered to administer true justice, and General Van Buren, who pronounced the above judgment, is a person endowed with a perfect knowledge of the law. But now we find that, a decision given in such a court of justice, by a person so well acquainted with the laws is adversely criticised by the public! Does this arise from the dearth of subjects for examination, or is there really room for doubt as to the justice of this decision?

In view of the fact that this judgment has no slight bearing upon the sovereign rights of our country as an independent empire, we think it our duty to make some remarks on it to our readers, but, before so doing, we shall state the reason why this case was brought before the court and the nature of the decision.

When in 1867 the Japanese Government conferred with the Representatives of the foreign powers about the opening of a settlement in Yedo, in accordance with the previously made treaty, an agreement was entered upon with the following words :—

"That the Japanese Government shall appoint a certain part of Yedo for the foreign concession, and that the subjects or citizens of the treaty powers can lease land, build or rent houses, and trade within the concession."

Tsukiji was settled as this concession, and when the land was sold by public auction in 1870, Batchelder, the defendant in the case in question, purchased four lots for $2,800, and after paying $430 in advance as the yearly rent, became the owner of those lots, and received his title deeds.

But as Batchelder has never paid any rent since, the Tokiô *Fu* brought a suit before the American Court in October last, claiming five years' rent with interest at two per cent per month, as stated in the title deed.- The defendant on this demand being made admitted the claim, but pleaded that he had purchased the lots on the faith of the agreement made between the Foreign Ministers and the Japanese Government, stipulating that foreigners should reside within the Tsukiji settlement. The Japanese Government had, he declared, broken the agreement by permitting foreigners to live outside of it. And by this his property, which was worth $22,000, has greatly fallen in value and brought upon him great losses. Indeed his property had fallen to a fourth of its original cost.

The Court after hearing this plea for non-payment of rent, not only dismissed the claim of the plaintiffs, but disclosed its leaning towards the defendant's side by expressing the opinion that damages to the value of $10,000 should be paid to him by the Tokiô *Fu*, and this judgment purports to be based upon the convention of 1876 and the title deeds of 1870. (Here follows a translation of General Van Buren's judgment.)

The Consul-General thus decided the case, and although he could not order this sum to be paid, yet he certified to the evidence which proved that prejudice to this extent had been incurred by the defendant.

The American Consul-General has, as seen above, given his decision against the Tokiô *Fu*. What do our readers think of it? It may have been given after a thorough consideration of the question. Yet it cannot escape the comments of the public, and the foreign press of Yokohama has already spoken of this decision as not being agreeable to justice.

Now whether foreigners should be compelled to live within the limits of the Tsukiji concession or not, if they are permitted to live outside of it, the permission is the prerogative of the Tokiô *Fu*—a right which an independent Government naturally possesses. If an American should not pay his rent as stipulated in the title deed, why did not the Tokiô *Fu* apply to the *Gaimusho* and let it

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

make a diplomatic question of it with the Foreign Representative? Why should an independent Government with sovereign rights go before a Consular Court in the same manner that ordinary commoners do? This is something not only incomprehensible but gravely deplorable.

But still if the Tôkiô *Fu* acted in that manner because the title deed stated that if any person fails to pay his rent, the Government of Japan is to claim it of the Consular authorities, then it must not be contented with this judgment, but appeal, for were it to submit to this judgment the Japanese Government would lose the rights of an independent Government, and the effects of the decision will spread to various parts of the country, and the face of our empire will thereby be shamed.

The Consul-General says that the defendant is in the right on the ground that, although it is not distinctly stated in the agreement made between the Foreign Representatives and our Government, yet as it contains the words that "foreigners may lease land within the settlement and trade" he infers that they should not live out of it. Is this not void of reason? For if what the Consul-General has said is true, then it seems as though the Japanese Government had entered in an agreement with the Foreign Representatives for the purpose of confining foreigners in a single corner of Tôkiô, and that the agreement had not been made for the purpose of increasing the convenience of foreign residents in Japan. And if this was the actual fact, is it a proper mode of carrying on our foreign trade and intercourse?

Let us suppose that the agreement did definitely state that foreigners were to be confined within the boundaries of the settlement at Tsukiji, still if the Government should enlarge the boundaries of that concession, would this not be acting in accordance with the main object with which that agreement was made, viz., facilitating trade and increasing the convenience of foreigners? But there is not a word in the lease that foreigners should be compelled to reside in Tsukiji and Tsukiji alone.

If there are still some that would say that the Consul-General is correct in his judgment we will put the following question before them. Were the Japanese Government, having the sovereign rights of an independent empire, to open to-day two or three more ports to foreigners, and American citizens of Yokohama and Kobe should say that they would not pay their rent because foreigners could live at newly opened ports, what then would the Consul-General say? Should a judgment be given in their favor it can only be done by a man who has not the slightest idea of what real estate is.

The conventions themselves were not made between our Government and the defendant, but between the Japanese Government and the Representatives of the foreign powers. The defendant being an American citizen was, through this agreement, enabled to lease land, to become its owner and to live on it, and it is therefore his duty to observe all the covenants by which these privileges were granted, and he has no right to plead that our Government had broken the agreement entered into between it and the Foreign Representatives. Right is in the hands of the Ministers and not in those of the defendant. But the Consul-General after declaring that we must do equity before seeking equity, has deemed a single man, an ordinary citizen, to be the one who had made the agreement with our Government

We will now state the actual covenant made between our Government and the defendant. It is his title deed. This was given by the Government to him, and with it the right of becoming the owner of the land. At the same time the defendant was bound by it to pay his rent, and should he fail to do so, he was to pay in addition monthly interest of two per cent.

Now when the right of purchasing this land was conferred on him he incurred reciprocal duties. And, failing to do this, the agreement becomes a one sided thing, and this can never be right. He must of course pay or forfeit the right of possession.

If a covenant so clear is not deemed binding, but is set aside in order to do justice, such justice cannot be praised. People never pay their rent because they like to do so, it is because they must give an equivalent for the right of possessing land, and they look upon it as a duty to which they are bound.

The number of people in the Tsukiji settlement is very small indeed, and what the lots bring is not sufficient to defray the expenses. We much regret this poor condition of affairs, yet at the same time we must deem it was an evil which is connected with real estate. The judgment of the American Consul-General gives the defendant the right of holding the land without paying rent for it, and this cannot be regarded as fair. If this judgment is upheld, its effects will spread to all the open ports and to all lands leased by foreigners in this country, and this would act enormously to our national prejudice.

We therefore hope that the Tôkiô *Fu* will appeal to a superior court in the United States, and thus substantiate its rights. We ask the public to express its views on this question, and say whether the judgment is just or otherwise.

Motive the Test of Culpability.

("Hôchi Shimbun," 6th December.)

General Lee did not forfeit his life at the close of the civil war in America, and our Government did not inflict capital punishment on the commander of the rebel force in Yezo* at the close of the late civil war. How is it that the acts of the two Governments were so analagous in this respect?

It is because they gave full consideration to the motives which incited these two leaders, and did not judge them solely by their actions.

Be they good or evil, the moral quality of men's actions cannot be determined by those actions alone. We must estimate the underlying motive, and in this way only can we come to sound conclusions in regard to such actions.

Thus, in trying criminals, it is of the highest importance to estimate the motives which led to the criminal act, and men whose acts seemed to deserve heavy punishment have often been saved from it by a full consideration of the motives which impelled them to action.

And this is of paramount importance in trying men accused of treason. It is undoubtedly a treasonable act to take up arms against an established Government, but men may do this under a great variety of motives. Some men have risen in the attempt to overthrow the tyrannical oppression of rulers, and to uphold the rights and liberties of the people, others to free a nation from the domination of an alien race, and others again may have been incited by ambition or the desire for fame.

Now there is a wide difference between those who rise in rebellion for the welfare of their country and those who do so from personal motives, though the acts in both cases must be regarded as acts of treason. And though the truth may only be accurately known at some future time, would it not be a truly lamentable thing if the blood of men animated by the love of their country should flow upon the execution ground?

The reason why the Government of the United States did not shed the blood of Lee, and why our Government spared Enomoto, was that these men did not rise in their own personal interests, though had their acts alone been taken into account, we do not think that they would have been thus spared. Whenever we have discussed the question of treason, we have never failed to admit our admiration at the wisdom shewn by the two Governments in these acts.

We hear that punishment was inflicted on the rebels of Kumamoto, Akidzuki and Hagi on the 3rd inst. Some were beheaded, others were sentenced to hard labour, others were deprived of their rank, while many were acquitted.

This is the second time that a man of high rank has been decapitated since the Restoration, the first case being that of Yeto Shimpei. How is it that so many men who upheld the present able Government should come to such a deplorable end?

We think that they themselves are at fault, and that no justification for their acts can be found in any want of consideration for them by their rulers.

But, it is argued, the Government spared the commander of the rebel forces in Yezo in the 1st year of Meiji, and yet beheaded the rebels of the 6th and 7th years. All were guilty of treason, and why then should the former have been treated with clemency and the latter with such severity? Moreover, the first was a man of no special prominence, while the latter were men of high rank and fame. How is it then? Was the former treated with leniency because the Government at that time was not fully established and thus too weak to punish fearlessly; and were the latter treated with severity because the Government, being fully established, desired to show its strength by its severity?

No, we do not think that this is the true explanation of the case. So far as taking up arms against the Government is concerned, the act was the same in one case as in the other. But when the motives in the two cases were examined, the Government saw good reason for pity and pardon in one case, while they found no such reason in the other. And it is clear to our mind that this cannot be regarded as an act of excessive leniency. If personal interests or ambition were the impelling motives of the late rebel leaders,

* Enomoto.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

we do not think that deportation or banishing were punishments of undue severity.

What were the motives of the late insurgents? Did they desire to hatch up the barbarous wish to the people here to bear? Or did they not rather desire to put the government of the country into their own hands and to do away with the evils of which they were jealous? Or again, did they [illegible] any ill will to the people?

It is, of course, impossible [illegible] but when we consider the [illegible] we are led to infer that the [illegible] to their acts.*

Time, in judging of acts of treason, will not fail to examine the underlying motives.

"THE CAROLINE ISLANDS."

Read before the Asiatic Society of Japan, on the 13th December, 1876, by Ernest Roberts, Esq.

The following notes of the voyage of the British schooner *Rupa*, amongst the Caroline Islands have been kindly placed at my disposal by Mr. Spencer, of Singapore (part owner of the vessel), who was on board her throughout the cruize. They furnish a narrative which will, I think, be read with interest by many here, treating as they do of lands and people which are not so very remote from these shores. The Caroline Islands consist of several groups spread out in a direction from West to East, and measuring between these extremes, somewhere about 2,000 miles, while from North to South they extend also for a distance of about 200 miles.

They may be said to be contained between the 7th and 10th parallel of North Latitude and extend from 134 degrees to 160 degrees East Longitude, and, to put it roughly, about 1,000 miles distant from this. In the course of this paper I shall have occasion to refer to some of the Philippine Islands and to the Mariana group, the latter lying between this and the Carolines. Mention will also be made of some of the Islands close to the Sebonan group, to the southward of the Carolines.

The British schooner *Rupa*, Mr. B. E. Gell, Master, left Singapore on the 10th January, 1875, bound on a trading and fishing voyage to the Caroline Islands, and to the Islands lying to the north of the equator as far as 154° E.

On the 30th January the schooner was off the Island of Gebe, from which canoes were seen to put off. When alongside the crews were invited on board. The head men were found to be Bugis, natives of the Celebes, and their language was Malay, while the rowers or paddlers were Papuans. One of the head men introduced himself as the Captain of Gebe and was anxious that the foreigners should go on shore. The invitation was, however, declined. These people had several sorts of fruits and vegetables and a few fowls in their canoes; they had also some wild nutmegs of which they said plenty were to be had on shore. Rice was apparently very scarce with them, and an offer was made to exchange three piculs of pearl shell for one of rice, and though the offer was a tempting one, it was withstood as it would have been impossible to procure rice at any of the other Islands it was intended to visit. A little tobacco and coffee, gunpowder and percussion caps were given to the head-men; some vegetables were purchased, and in addition some seed pearls of good water but of small size.

On the 15th February the *Rupa* arrived off the Pellew Islands and anchored in the harbour of Malakan. This island is said to have been purchased from the natives by the late Captain Cheyne, and the papers relating to the purchase are, or were lately, at the British Consulate at Manila. The natives also consider the Island of Errakong, near which the British ship *Antelope* was wrecked some ninety years ago, as belonging to the British Government.

* Here [illegible] which we drew [illegible] to [illegible] to [illegible] to [illegible] [illegible] [illegible]

facture nor of the material of which they are composed can be found, and the only way in which the natives account for them is that they came from the heavens. The most probable conjecture is that they were brought by the the Arabs who are supposed to have traded here in days gone by.

The whole of the Pacific Islands are being gradually depopulated; in the Pellews the principal cause at work is an epidemic which takes the form of a species of influenza. This, or a modification of it, appears from time to time throughout the Caroline group and sometimes attacks the Europeans living on the islands.

In the Pellews and Uap—an island close to the Pellew and known as Pillula kap,—there are institutions known to Europeans as "big houses" which are also potent adjuncts to depopulation. The primary object of these houses is to keep the fighting men together in the event of an attack being made on the village during the night, the time usually chosen by these people for making raids on each other. They are, however, merely brothels, the inmates being, as a rule, those taken prisoners in the wars, those hired from other towns, and women who have left their husbands. There are many customs regulating these houses and their inmates which are unintelligible to Europeans, and on occasions all women, even of the highest class, have to spend some time in them. As a natural consequence there are but few people married. Of the married women it may be safely said that not two women in five bear children. Two or three children are considered a large family.

In common with most of the Pacific Islanders these people have solemn dances, generally at the conclusion of a war or feasts; and there are also dances in which women alone perform, but they are rare and usually scenes of debauchery, great licence being allowed on such occasions.

The men all wear the tappa, or loin cloth, common to the whole of the Pacific Islands, red and blue cloth being most esteemed. The women wear a kind of apron made of various leaves and grasses, principally from the Pandanus or screw pine, dried and shredded out. Some of the principal families have the privilege of dyeing the dresses of the women of various colours; this privilege is much esteemed and encroachments on it are punished with a fine.

All the people are tattoed on the hands, arms and legs, and a rude system of heraldry may be traced in this and in the decoration of the canoes of the chiefs and principal people.

Wars, so called, are frequent, and a settled enmity exists between the natives of the northern and southern portions of the group. Some two or three years ago, the King (so called) of Artingual (the most important place in the north) married the head woman of Corror. It was thought that this would have brought about a lasting peace, but this has not proved to be the case hitherto.

In former times the spear was the only offensive weapon, but of late years the natives have been supplied with fire arms and genérally show considerable skill in their use.

The Pellews are sparsely inhabited by a race of less stature than the other Caroline Islands, with the exception of the Island of Uap or Yap, a small Island lying to the north-east of the Pellews. They are also darker in colour, although occasionally some of light colour are found amongst them, principally among the chief families. The men are lazy and do little else than fish, leaving the cultivation of the tarro to the women; and it is noteworthy that the women attached to the big houses are not allowed to work in the tarro grounds.

Great care is taken of the children, of whom, however, there are very few. At the age of 30 or 35 years the people commence to look old, and it is rare to find man or woman above the age of fifty. There are several half-breeds on the islands, descendants of European sailors and others who have taken up their abode in these islands. There are also descendants of white women and natives on the group, though no accounts of how the women got here is extant, but as the natives are known to have attacked several ships about fifty or sixty years ago, the women were probably taken from some captured vessel.

The villages are almost without exception built at a short distance from the sea, the houses being neatly constructed some two or three feet from the ground, the roofs of which are thatched with grass and the leaves of the pandanus. In front of each house are seen the graves of deceased members of the family. The houses go with the titles, each chief in succession occupying the residence of his predecessor. In the centre of the villages there are paved squares in which consultations take place and dances are performed. There are paved roads through every village of the group, and when repairs are needed these are done by the community, any person absenting himself being fined. In front of every village of importance are large sea walls or piers built out on to the reefs, and some of these are apparently very ancient. That at Corror, the most important of the towns, is very substantially built of stone and coral and is about a quarter of a mile long. The "big houses" before mentioned are also substantially built of hard wood and well thatched, and are from sixty to seventy feet long, and from twelve to fifteen broad. In these buildings the cross beams and supports are rudely carved in relief, which carvings record the history of the people, and purport to chronicle any remarkable occurrence, but there are, however, but few of the natives who can explain them.

The language of the Pellews is idiomatic and apparently difficult of acquirement by Europeans. A sufficient knowledge for trading purposes is, however, soon obtained.

From the Pellews the schooner *Rupak* shaped her course to the Matelotas. These will be observed on the map to be a group to the eastward and northward of the Pellews, but still to the southward of the island of Uap previously mentioned. The Matelotas are also known under the name of the Gulus, and are inhabited by a few light-complexioned people resembling the other Caroline Islanders. Some six or seven years ago this group, and the neighbouring one of the Mackenzies, almost due north of the Matelotas, were all but entirely swept away by a severe cyclone which destroyed nearly the whole of the cocoanut palms,—the fruit of which, with fish, is the only food of the natives.

The Mackenzie group is also sparsely peopled by a light coloured race. On one of these islands the Jesuit father Cantova was killed, and the few natives remaining still look for his return, thinking that he will restore the islands to their original state.

The Uap group, lying between the Matelotas and the Mackenzies, consist of three principal islands, which are comparatively high, and are thickly inhabited by a people similar in appearance to those of the Pellews; their manners and customs also in a great measure resemble those of the Pellew natives, but they are, however, a superior class of men and far more industrious. They cultivate large quantities of yams and sweet potatoes, tobacco and some of the tropical fruits. The whole of the coast is thickly planted with cocoanut palms and a large quantity of coppra is produced annually; coppra being, I may mention, the dried fruit of the cocoanut. The reefs surrounding the group formerly furnished bêche-de-mer, but at present only a very little can be procured. Pigs are plentiful, and there is also a kind of half domesticated fowl which can be procured cheaply. Deer and goats are seen, but the natives do not protect them as they destroy their plantations. The rat appears to be the only indigenous aminal, and the large edible iguana is found in the jungle, but is protected by the natives, who regard it as sacred. The money of these people consists of large worked pieces (in the shape of a mill stone) of a semi-transparent spar, which is procured from the Pellew Islands and esteemed very highly; its principal uses are to pay war indemnities and the funeral expenses of the chiefs. Pearl shell of large size is greatly valued and much sought after, and vessels trading in this group can supply themselves with a considerable quantity of provisions for a few pieces of pearl shell.

Until of late years these people have borne a very bad character, in consequence of their having boarded and captured several vessels from Manila and murdered their crews. Now, however, they are generally well disposed towards Europeans, of whom there are nearly always three or four living on the group. The government is similar to that of the Pellews, but the natives acknowledge one supreme chief. This office appears to be hereditary, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the present holder of it is a young man very well disposed towards Europeans, to whom it is customary for all trading vessels to make some trifling present. In Uap, as a rule, the chiefs appear to have considerable authority, and the absolute control of life and death.

The people have a few firearms in their possession, but they are not skilful in the use of them, preferring the spear, in the handling of which they are very expert. Their wars are conducted with energy, and a single battle (so called) is generally decisive.

The dress of the Uap natives is somewhat like that of the Pellew Islanders; the women wear petticoats made of leaves and grasses reaching to the ankle, the men wear the tappa with the addition of bunches of bark of the bread-fruit and other trees. Tattooing is practised by them —the patterns and figures being more elaborate than those of the Pellew people.

Uap is about 180 miles from the Pellews. Until recently the inhabitants travelled across to the Pellews in their canoes, many of which were lost annually. Recently, however, the number of European vessels trading to these islands has been greater than formerly, and passages are readily granted to the islanders to and from Uap to the Pellews, where they dig out and fashion what serves to them as a currency, the vessels returning and picking them up a few months later.

The German corvette *Hertha* called at this group. It happened that a few days before her arrival an Englishman trading on these islands for the Hamburg firm of Godeffroi and Sons was robbed and roughly handled by the natives of the northern portion of the group. Captain Knorr, of the *Hertha*, sent for the chiefs, but all the natives young and old had themselves in the jungle, and it was three days before he could get any of them to come before him, and then only by dint of threats. He made them restore the stolen property and fined them a quantity of copra, telling them that any further outrages on Europeans would be severely punished.

On the 28th March the schooner called at Ulleai, which is a group of low coral islands almost surrounded by reefs. There is an Englishman living on this group who informed those on board the schooner that a Spanish man-of-war had been there shortly before, the crew of which had cut down half the bread-fruit trees and a large number of cocoanut trees, and that the people were consequently starving and dying at the rate of five and six a day. The commander of the vessel also ordered Williams, the Englishman above referred to, to haul down a flag that he kept hoisted there, and on his refusing to do so a boat's crew was sent on shore to pull the flag down. The commander then gave the natives a Spanish flag and told them to allow no other to be hoisted, but on the departure of the vessel the natives kaled the man who had piloted her in and burnt the Spanish flag.

At the time of the *Rapak's* visit to Ouleai, the epidemic above alluded to was raging. This, together with the scarcity of food, was making great havoc among the people, and Williams, the Englishman, stated that he did not expect more than half the natives would survive. They are a fine, well made race, good featured, light in colour, and are most harmless and inoffensive. This group has at one time been thickly inhabited and there are remains of piers and breakwaters similar to those found in the Pellews. The dress of the natives consists of a species of fine mat which they weave from the fibre of the pandanus. This group produces nothing but cocoanuts, which with fish is the sole food of the natives.

On the 31st March the schooner hove to off Evalouk and several canoes came alongside. There is nothing to remark about these islands; they are low and of coral formation, producing nothing but the cocoanut. The natives traded off flying fish against tobacco. They are a tall, handsome race, of light colour, their bodies being closely tattooed all over, their dress being the same as that of the Ouleai people.

On the 14th April the schooner anchored in the Hogoleu group under the Island of Tol. The inhabitants of this group have always had a bad reputation, and in 1872 Captain Simpson, of H.M.S. *Blanche*, had occasion to administer a pretty severe chastisement to them. A few canoes came off but brought only a small quantity of bananas and cocoanuts for which they wanted tobacco. The natives are slightly built, but tall and of fair complexion. Their canoes are very rudely made, when compared with those of their neighbours to the westward, and everything about them seemed to point to a lower type of civilization.

This group is inhabited by two distinct races of people, that to the westward as described above, while to the eastward they are more like Papuans or Negroes, having woolly hair and dark complexions. These two tribes are continually at war with each other, and their notorious inhospitality to strangers is the reason that so little is known of the group; one of the most important in size in the Caroline range. The larger island exhibited much high land but very little signs of cultivation were seen. The houses are built on the summit of the hills, which fact is of itself sufficient evidence of the predatory nature of the people. Tortoiseshell can be procured in this group, but only in small quantities. Bêche-de-mer is found on the northern group, but fishing would not be remunerative while the natives continue so hostile.

The schooner remained at this group three days, during which time large canoes full of men were seen passing to and fro, and as from the treacherous nature of the people apprehensions of an attack were entertained, it was determined to leave, although all the people who came on board had their faces smeared over with red turmeric, the use of which root is an emblem of peace, or of peaceful intentions in the Pacific. The much valued orange cowrie is found here, but none were procured.

On the 19th April the Namaloak Islands were sighted, but as they were surrounded by a barrier reef it was found to be impossible to enter the lagoon. These islands are covered with cocoanut trees and are of the usual low coral formation. The natives do not bear a very good character, no canoes coming off, which is in itself a bad sign.

Leaving Namaloak the schooner was steered for the Mortlock Islands, which were reached on the 30th April. Although in former years the inhabitants of these islands bore a bad character they are at present a most harmless and inoffensive race. The Mortlocks consist of three groups, all of low coral formation and thinly inhabited. At the time of the *Rapak's* visit the cocoanut crop had failed and the people were very badly off for food. Fish is scarce here which is seldom the case in the Pacific. A native of Peraapito, or Ascension, is living in the Soatone portion of this group in the capacity of Missionary teacher, and there is also an European living on one of the islands.

Shortly after the schooner anchored a chief came on board and made a statement to the effect that a vessel had been there some three years previously and had taken away about forty men and women. Probably reference was made to a German vessel which is reported to have taken away some of the inhabitants of these islands to Samoa, to work on the cotton plantations there. The people of the group are well built and fair in colour, but of smaller stature than those to the westward. They have a few taro patches, but these were apparently neglected and seemed to produce but little, and their habitations are nothing more than miserable huts with a hole at one end for ingress and egress. The people were shy; the dress is similar to that worn on the Oulleai group. Bêche-de-mer was found in the lagoon but not in large quantities.

On the 27th April the *Rapak* anchored in the lagoon at Nongoura, being the first foreign vessel that had ever visited there. Nongoura is a small group of low coral islands about five miles in breadth. The people of this group are without exception the finest looking, and most friendly and hospitable of all met with in the course of the schooner's cruize, and as the vessel remained there about a month, there was ample opportunity of testing their good qualities.

The islands, however, are very poor, producing nothing but cocoanut and a little brack (a kind of root). Pearl shell of a quality superior to that usually found in the Carolines was formerly to be got here, but the supply is exhausted. Bêche-de-mer is obtainable in small quantities only, but of a very superior description.

A Dane was living on this group at the time of the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Rupak's visit, and confirmed the good opinion formed of the natives. There were only about one hundred and forty or fifty inhabitants on the group, and it seems probable that in the course of sixty or seventy years they will be almost extinct. These people have some knowledge of the division of time and of days and years; they have also a form of religion, and a temple in which are some rude carved images. The chief priest is never allowed to leave his house except on extraordinary occasions, but the arrival of the *Rupak* in the lagoon was looked upon as one, and he was allowed to go on board. The number of rats on these islands is almost beyond belief, and they are so tame that when the people are eating they come and sit round them waiting for any morsels that fall. The houses are built without sides, being merely roofed, and the supports are carefully smoothed down to prevent the rats climbing up and eating the provisions which are stored away on shelves above.

The chief personage on this group is always a woman and the honour is hereditary. The islands were left with regret, the kindness of the natives having endeared them to all on board, and standing out in marked contrast to the behaviour of the other Caroline Islanders.

From Nongoura the schooner made for the Greenwich Islands. On the 24th May the schooner anchored in a lagoon of considerable size and under the lee of a small island. The group was found to consist of about thirty low coral islands, on most of which were plenty of cocoanut palms and breadfruit trees. Shortly after anchoring a canoe with twelve men approached the vessel; they appeared very much frightened, and it was with great difficulty that they were ultimately induced to come alongside. A few beads and some tobacco were given them, but they did not seem to know much about either.

These people appeared to be of an entirely different race to any that had hitherto been met with, the men being well built but shorter than most of the other Caroline Islanders. They wear their hair very short, use no description of ornament whatever and are not tattoed. The women have their heads shaved close and are dressed in mats which they wear tied round the waist. The islands produce a little tarro and brack, but the principal food of the people is the cocoanut, of which they have several varieties. No iron implements were seen in use amongst them, and no weapons with the exception of a small javelin used for striking fish, the chisels with which they fashion their canoes and paddles, and shape wood for building purposes, being made from the shell of the kima. There are not more than two hundred inhabitants on the group. More consideration appears to be shown to the women here than to those in most of the Pacific Islands, and the people are hospitable. The *Rupak* remained at the Greenwich Islands about a month, and then endeavoured to go to the Paed Islands but was prevented by adverse winds and strong currents.

On the 12th July the schooner was off Kaans Island. Canoes came of with tortoise-shell, yarn, cocoanuts and turtle eggs, for which beads and tobacco were exchanged. The natives are short in stature, of negro type but without the thick lips. A few of them are tattoed, the noses of all are pierced and have the claws of a small species of crab inserted in the nostrils. The hair is woolly and shaved in the most grotesque manner, chunam and different coloured ochres being rubbed in. Every canoe is provided with a large bundle of spears, the shafts of which are of bamboo, ornamented with carvings, the heads being made of the betel and cocoanut palm. The canoes are very neatly built and some had handsome ornaments carved in ebony, and other hard wood, at the head and stern.

Passing round the southern end of this group the *Rupak* stood along the coast of New Ireland. As the natives bear a bad character and are known to be cannibals, no attempt was made to land. In fact, finding that canoes were meeting in force it was thought prudent to leave as soon as possible. As the schooner coasted along New Ireland a few canoes came off bringing fruit vegetable, etc., which were purchased for trifling lots of beads.

Gerrit Denys and Fishers Islands were passed but no canoes came off. All along this coast the people are continually at war with one another. From what was seen of New Ireland the land was observed to be high and irregular; several clearings were visible, but very few cocoanut palms, although plentiful on the other coasts.

Passing along to the westward the natives were found to be of the same type but their heads were differently decorated. Some were shaved on one side only, the unshaven side being covered with white chunam and with little ornaments of a pink colour stuck into it, while others again were decorated with the heads, tails and wings of bright plumaged birds. The men's bodies were thickly covered with hair, giving more particularly to those advanced in years an almost apish appearance. The canoes were found to be different to those that had been seen to the eastward, as they are simply "dug outs," but of most elegant shape and workmanship, lightly outrigged with bamboo, with carvings at head and stern, and of a better style than those seen previously. A few spears were seen in them, but the principal weapon was the blow pipe, of which there were several in each canoe.

Leaving New Ireland the *Rupak* passed along the shore of New Hanover. Some few canoes came off but stopped about 200 yards from the ship, and it was some time before their inmates could be persuaded to come alongside. A little tortoise-shell and some yams were got from them. The natives are similar to those of New Ireland, the canoes alike, with the addition of eyes painted in the bows. Some bamboo pandean pipes and a kind of jew's harp were procured from them, being the only things in the shape of musical instruments met with up to now.

The northern coast of New Hanover is not very high and is flanked by low sandy islands at about a mile from the main land. The interior of the island is moderately elevated, but nothing was seen of the "beautiful plantations" described by Pampier and other navigators.

Leaving New Hanover the *Rupak* made the Portland Islands, which were found to be four in number surrounded by extensive reefs. As it seemed to be a likely place for bêche-de-mer, a passage was sought in to the lagoon, but none could be found, and it was with reluctance that the schooner was kept on her course. A canoe, however, came off and a few green cocoanuts were obtained from the natives, who are similar in appearance to those of New Hanover. On the charts seven islands are marked as forming the group. There appeared to have been a violent storm a little before the *Rupak* visited here, as several large uprooted trees were seen, also banks of rocks which would seem to show that the remainder of the group had been washed away.

On the 13th July the schooner was close to the small Island of La Vandola, which is moderately high and cone shaped. No canoes came off and there were no signs of a landing place—the sea breaking heavily on the beach. Large fires were burning on different parts of the Island, probably as signals.

On the 14th the Island of Jesu Maria was sighted, being a comparatively large island to the eastward of the Admiralty group. In the afternoon several canoes came off and many natives visited the vessel. They are quite a distinct race from the New Island and New Hanover people and have more the appearance of the Uap and Pellew natives, both in features and in colour. They wore the tappa with bracelets, armlets and anklets of small beads very neatly worked. The hair of the young and middle aged men is fastened up in a knot on the top of the head, done up into a queue behind and decorated with beads and a blue seed or bean, but old men and boys have their heads close shaved. All were scented with patchouli, bunches of which were disposed about their persons. These people brought off considerable quantities of tortoise-shell of a superior quality, but demanded such high prices that very little trade could be done with them. Hearing that bêche-de-mer was plentiful it was determined to heave to until the next day and examine the place.

On the following morning a boat was sent to explore the reef and if possible find an anchorage for the ship, but the search was unsuccessful as there was no protection from the prevailing winds—the reef being of very small extent and affording no shelter, although on the charts it

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is marked as very extensive and as surrounding the island. Bêche-de-mer of the best quality was found, but it was vain to attempt fishing for it as no anchorage could be found for the vessel. When the boat went on shore the following morning, there were several canoes on the reef, and the natives being in considerable numbers were inclined to be somewhat, the more so when they found the boats crew was unarmed. The crew, however, got safely back on board and avoided a collision.

Still steering westward some islands supposed to be the San Miguel group were made the same afternoon, but their position did not, however, agree with that given on the chart. Several canoes came off, the natives seeming very friendly and helping to work the vessel through the reef. At 6 p.m. the canoes were sent away and watches were set for the night, but before daylight the next morning several canoes were seen coming from different parts of the group, and at 7 a.m. a large number were alongside, though as women and children were in several of them it was supposed they were inclined to be friendly. The anchorage not being considered safe, the mate went away in the long boat to look for a better one. While he was sounding close in shore a large number of natives came on to the beach threatening him with spears, and shortly after three large canoes came out and endeavoured to cut the boat off. A few rifle shots were fired over their heads which caused them to retreat, and the boat got safely back to the ship, where preparations were at once made to resist the attack which was imminent and which it was impossible to avoid as it was a dead calm and way could not be got on the vessel. The canoes soon came down upon the schooner in force, but fire was opened upon them which compelled a retreat. Subsequently, and during the confusion, the natives from the Island of Uap who were on board the schooner got very excited, and taking to the boats with rifles and spears went in chase, but unfortunately fell into an ambush a short distance from the ship and were all of them slightly killed. Not having any boats left they were completely helpless on board the schooner, having only a few natives remaining, the crew (Chinese) being all sick; a volley was fired into the village, doing apparently but little damage, and shortly afterwards the canoes were again seen making to the ship in greater force than before. At this time a slight breeze sprang up, and by its aid the schooner managed to get clear outside the reef, when the wind again died away; and although the canoes still followed, when they found the schooner was clear of the reef they desisted from pursuit. There is reason for fearing that but a short time previous to this some foreign vessel must have fallen into their hands, as European sawn planks, rope and carpenter's tools were seen to be in possession of the natives, many of whom were also decorated with foreign made buttons.

The canoes of this people are large and substantially built, and capable of carrying from 40 to 50 men, being outrigged on one side, with a fighting stage on the other. As they all carried fire places and had appliances for rigging a sort of cabin or protection against the weather, it seems probable that the natives are accustomed to go long distances in them. All the canoes that were alongside the schooner before the attack were well furnished with provisions, large fish, yams, roast pork and various fruits. They had also large bundles of short javelins headed with a sort of obsidian or volcanic glass, or a species of flint, which they kept concealed in the bottoms of their canoes.

These people use the betel nut and piri leaf. The lime is carried in a gourd, is used dry and is conveyed to the mouth by means of an ebony stick. The two or three villages that were seen appeared to be of small extent, built upon piles and surrounded by a stockade. While the attack lasted, and indeed for some time afterwards, a loud noise of tomtoms was heard but none were seen in the canoes.

The *Rupak* now rounded the eastern coast of the Island Jesu Maria before alluded to, and several low islands densely covered with cocoanut palm were passed. The schooner then coasted along the northern shore of Admiralty Islands, which is high and appears to be thickly wooded. No canoes came off, which goes to show that most of the natives in that neighbourhood had been implicated in the recent attack on the vessel.

Leaving the Admiralty Islands the Anchorites were made, and in due course the group known as the Hermits was reached. Canoes came off, but the bearing of the natives attracted the suspicion of all on board the schooner. But a few months previous H. M. S. *Alacrity* had visited these islands and administered a pretty severe lesson in consequence of the murder of a Capt. Bird; some of the villages were burnt down and two of the chiefs implicated in the murder were taken to Sydney.

Being short of water it was intended to call at the Exchequers and fill up from a well which had been dug there in the previous year, and from which a good supply had been obtained. The natives on board, however, begged that the schooner should not touch there, and a heavy shower of rain falling obviated the necessity. The Exchequers consists of a very extensive group of coral islands thinly inhabited by a most miserable and degraded race. They are hostile to all strangers and continually at war with the Hermit people. In the afternoon of the 25th July Durour Island was made, which is an island about five miles long, low, with a great number of cocoanut palms; no natives were seen. From this until the 18th August the schooner was beating up for the Pellews, the weather being very unsettled, currents contrary, and as a rule the winds very light.

On the 25th November the Serangani Islands lying to the southward of Mindanao were called at. The Spaniards claim these as part of the Philippines, and they claim also all the islands lying on and above the fifth parallel of latitude as far as Ponapite, the easternmost of the Caroline group. Whalers formerly called at the Serangani Islands to procure provisions, which at certain seasons are cheap and plentiful. The island of Mindanao, the southernmost of the Philippines, is said to be very rich in minerals. Large quantities of bees-wax, coffee and tobacco are produced here, but were difficult to obtain in consequence of restrictions placed in the way of traders. The importation of arms, ammunition, lead, iron and steel is forbidden, but the natives occasionally get supplies from the Serangani Islands, the inhabitants of the latter obtaining them from whalers and other passing vessels in exchange for provisions, which at certain seasons are here plentiful and cheap. Ponies of good size exist here in great number, and game is also plentiful.

Lying to the southward of Serangani are several small uninhabited islands. During the S. W. monsoon the natives of Sangir, an island between the Philippines and the Celebes, come here to catch the hawks-bill and the green turtle, which are then in abundance. These islands produce no food stuffs except a little sago and arrowroot. From here the *Rupak* passed along to the eastward and made the Tulour group, which consists of three principal islands, over which, and the neighbouring islands, the Dutch claim sovereignty, but have no officials stationed here. There are, however, two missionaries on the group appointed and paid by the Netherlands Indian Government, and at irregular intervals a gunboat calls to enquire into complaints.

The natives of the island have for a considerable time had intercourse with whalers, and at one village named Lerong nearly all the people were found to speak English with tolerable fluency. The northern portion of the group is less known; the inhabitants are said to be unruly and to occasionally pirate small craft belonging to the southern islands. The missionaries referred to above have herds of cattle, the stock of which was imported from the Celebes. Whalers formerly supplied themselves here, but they have been getting scarcer and scarcer every year. At the time of the *Rupak's* visit a bullock could be purchased for a little less than $10; goats and pigs can be obtained, but they are scarce and dear. The Tulour Islands are moderately high and well wooded; ebony is abundant, a large proportion of the houses being built of it.

Leaving the Tulour Isles the little known Nanossa group were visited. These consist of seven low lying islands, producing little worth mentioning except potatoes and tarro of an inferior quality. The natives are dependent on the Tulour people for rice, which is the staple food. The people on this group appeared most industrious, the men building canoes and prahus which they barter for rice with the people of Tulour and Sangir. The women are employed in weaving cloth from a species

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

of hemp and in making mats, both of which find a ready sale to the southward. The houses of these people are large and strongly built of ebony and other hard wood, and in the centre of each building there is a large common room with appartments for from sixty to seventy families arranged round it. Tortoise-shell and bêche-de-mer can be got here but only in small quantities.

Sangir, which was next visited, lies to the S.W. of Tulour; it is high and has an extinct volcano on the west side, with isolated rocks surrounding it. The cocoanut abounds here and large quantities of oil are produced. There are about half-a-dozen Chinese located on the island who purchase cocoanut oil, giving in exchange goods of European and Chinese manufacture. This island is more immediately under the control of the N. I. Government, the chief paying a small nominal yearly tribute to the Resident of Menado, a town in the north of the Celebes, who regulates the succession and invests them with the emblems of chieftainship. There are two missionaries resident here, and at Taruna there is a church and schoolhouse, apparently very little used, however.

The natives of Nanossa, Tulour and Sangir are of the same race and speak the same language. Their dress is principally made of native cloth, but the head dress consists of an European coloured handkerchief.

From here the *Rupak* went to Guam, the principal Island of the Ladrone or Mariana group. The chief town, San Luis d'Apra, is about 7 miles from the port, to which the only conveyances are bullock carts. The Marianas are used by the Spaniards as a penal settlement, and at the time of the *Rupak's* visit there were about seven hundred convicts on the islands. Every six months a vessel comes from Manila, bringing provisions. Bread, fruits and cocoanuts abound, the former being the staple food of the poorer people, while deer, poultry, pigs, and goats are to be had in plenty.

The town of San Luis d'Apra consists of about 400 houses, ninety per cent. of which are built of wood and the remainder of stone and coral, covered with plaster. The cathedral is rather more than 200 years old, the exterior being unimposing and the enclosure around it is neglected and overgrown with weeds. The Vicar-Apostolic, a gentleman who has been many years resident in the Marianas and talks English fluently, was kind and obliging; in fact all the officials were most courteous and appeared anxious to assist in every way.

Guam was formerly a great resort for whalers. On Guam, Rota and Tinian there are a large number of Caroline Islanders who were brought here several years ago and are anxious to return, numbering in all about 800. Rota is used as a convict settlement from Guam, the most unruly of the Spanish prisoners being sent there. An Englishman has established himself on Tinian. Coasting up, the whole of the Marianas were sighted as were also the Bonins, and Rosario, a small island to the westward of the Bonins was called at. There was no vegetation here beyond a little grass and sage bush; the wreck of a junk was seen on the beach. On the 13th September the *Rupak* arrived in Yokohama.

THE OPIUM TRAFFIC.

At the meeting of the British Association at Glasgow last week, in the Economic Science Section, Mr. Turner read a paper on the Statistics of the of the Indian Opium Revenue. He pointed out the enormous increase of the returns from opium. In eighty-three years (he stated) the drug has yielded to India a total net profit of £184,000,000. The relative importance of this item of revenue has vastly increased. Less than one twentieth of the total revenue at the beginning of the century, it is now between a sixth and a seventh. This great revenue is seriously imperilled by the progress of the poppy in China, and the change of policy of the Chinese Government. During the last ten years the cultivation has spread from the west to the coast, and is now common in provinces where a few years since it was unknown. At the same time there is an evident conflict in the minds of the governors of China. The prohibitory laws against the poppy are not repealed, and during the present year the Viceroy of Kiang Su has made a vigorous attack upon opium smoking by closing thousands of opium dens in Soochow and Nanking. Motives of a political nature impel the Chinese to foster the poppy within the empire, while the strong popular conviction of the evil of opium smoking urges them to destroy the growth of so noxious an article. Fear of Great Britain impedes a general attempt to put down the vice. It is possible, therefore, that things may remain as they are for some time longer, though in the end retribution will come.

SHEEP-FARMING.

(Supplement to No. 19 of the "Nôgiô-Zasshi" (Agricultural Magazine) October 1876.)

As the public are already aware, the Department of Home Affairs notified certain regulations for the purchase wool, but as sheep raising has as yet made no great progress in the country, and there may be some who are unaquainted with the various breeds of sheep, we will therefore give below the notification in full and illustrations representing the different kinds of sheep, with a few remarks about their peculiarities, for the benefit of the public in general.

NOTIFICATION No. 36 OF THE DEPARTMENT OF HOME AFFAIRS.

The regulation for the purchase of sheep wool.

Those who are desirous of selling wool, must first shear the wool off the sheep, it must then be well washed with water, and the weight of the same is to be ascertained after it is perfectly dry. They should present the wool and a statement with the number of sheep they have in their possession, to the authorities of the local office under the jurisdiction of which they live. And those local authorities shall, after ascertaining the proper weight, pay whoever presents the wool from the sinking funds of such local office.

The local authorities shall forward the wool, the name and the address of the grower, the weight and the receipt of the wool to the Branch office of the Bureau of Agricalture at Naitô Shinjiku, Tôkiô, and the purchase money shall be returned from that office to the local authorities, the expenses for the conveyence being defrayed by the local authorities and dealt with in accordance with the above.

When growers are desirous of bringing wool directly to the Branch office of the Bureau of Agriculture, they may either do so themselves, or by a substitute, or by express. When they send wool through the express they must send in their receipt at the same time, so that the purchase money may be forwarded to them. They must also forward their address, the number of head of sheep they have in their possession and weight of the wool they forward. On examination the wool which has been found to be spoiled by oil or insufficient washing will be rejected.

The prices paid shall be for the present as follows:—

Merino	30 *sen*	per pound.
Leicester, Southdown, Cotswold	25 „	„
Chinese	20 „	„

Merino.—Head large and the horns curved, forehead high and legs long, the skin below the throat long and folded. They are naturally strong, their wool resesembles silk and being generally fat are able to bear the cold well. They can be raised either in warm or cold climates, and on average produce from seven to eight pounds of wool yearly. This is the first among sheep.

Leicester.—Wool is long, the head small and has no horns, the wool on the face and legs being white; the back is in a direct horizontal line, the hind legs are slightly bent forward, but being weaker than other species greater care must naturally be taken with them. The wool is long and fine, and the yield is over seven pounds yearly. This sheep grows rapidly, its flesh is good and attains excellent condition.

Southdown.—Wool short, no horns, and black wool covering the face and legs, well framed and naturally strong. They multiply with great rapidity indifferent of the place or mode of raising. The wool is short and curly, each head producing about six pounds of wool annually. The flesh makes delicious food.

Cotswold.—Resembles the Leicester in shape, the wool is about six inches long and is very strong. They produce yearly over seven pounds of wool, are naturally strong and bear the cold well, grow rapidly and their flesh is fair. When raised with care ewes gives birth to two lambs at a time.

All wool seems to contain some greasy substance resembling soap, and the mode in which the sheep can be freed from this oily substance is this. In warm days in May or June the sheep should be placed in a stream where it is deep enough to allow the head of the sheep to remain out of water,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

where they should be washed down with a brush (fresh water is desirable). After they are washed in this manner they should be dried and then sheared. We shall from time to time publish further facts, in more minute manner, concerning the methods of sheep raising.

ASIATIC SOCIETY OF JAPAN.

A regular meeting of the Society was held on Wednesday, the 13th instant at the Grand Hotel, Yokohama. In the absence of the President and Vice Presidents, Dr Hepburn occupied the chair.

The minutes of the last meeting, held in Tôkiô on the 22nd November, were read and approved, and the election at the meeting of the council on the 8th instant of the Revd. A. L. Amerman as a member of the Society, was announced.

Mr. Russell Robertson then read a paper on the Caroline Islands.

Mr. J. C. Hall made some interesting observations on the two races that are found in the islands of the Pacific, remarking that our knowledge of the Brown, or Malay Race, is far in excess of that which we possess of the Black Race; and added some information respecting the languages or dialects spoken.

Mr. Cole, a visitor, stated that in consequence of the falling off of the yield in the pearl fisheries off the north of Australia, expeditions to the Caroline Islands were more frequently fitted out from Singapore than had hitherto been the case. He thought that the hostile disposition shown at one of the islands might possibly be considered as an indication that kidnapping had been practised at that particular island.

The Chairman then expressed his sense of the value of the paper, and requested Mr. Robertson to convey to its author the thanks of the Society.

Correspondence.

NATIVE SIGNBOARDS.

To the Editor of the "Japan Weekly Mail."

Tôkiô, 16th December, 1876.

Dear Sir,—In one of the principal streets of Yedo I lately lit upon the following mysterious inscription:

Enrol Haired Oil.

Being endowed by nature with a disposition which forbids me to accept anything which I cannot understand—my friends and acquaintances say I am a prying and inquisitive fellow—I endeavoured to ascertain by enquiry of the man who exhibited the signboard in question what was the meaning of the legend. I noticed, however, a remarkable indisposition on his part to afford me the slightest information, which, I confess, aroused my suspicions that something of a deep and mystic nature, understood perhaps by but a few, was here intended to be conveyed. It is but right to mention that this reticence upon his part may have been remotely influenced by the fact that at the moment of my enquiry—I am somewhat impetuous—he scalded his mouth severely with a cup of hot water of which he was in the act of partaking. This, I admit, may be considered a trial to a man's temper, but should not, I would maintain, prevent any reasonable individual, even though blassed by a little pain, from at the very least giving, if only out of gratitude for the lecture which I read him upon the beauty of fortitude, a *quid pro quo* in the shape of some reply. He was deaf, however, to all my entreaties, and I am, Sir, now no wiser than I was before. Can you, out of the profundity of your knowledge, relieve my ignorance? An unsolved enigma is to me so many sleepless nights, the loss of so many pounds avoirdupois. I am almost persuaded that it is a cryptogram, and am by no means certain that the villain who turned a deaf ear and a scalded lip towards me, took refuge in the boiling water to escape my enquiries.

Paperlveoar.

is puzzling at first sight but is easily discovered after a little inspection to be a cryptogram of the simplest kind, requiring merely inversion for its elucidation, as any person purchasing the article so advertised can ascertain for himself.

Rock and Haing and Glass to Sale,

has hitherto baffled the most intelligent of investigators, but there are hopes that the offer of a suitable reward may have an influence in directing sustained attention to its solution. It is certain to turn out to be of much deeper import than, as suggested by an ingenious gentleman of this city,

Locks and Hinges and Glass for Sale.

Yours faithfully,

PAUL PRY.

Law Report.

IN H. B. M.'s PROVINCIAL COURT.

Before H. S. Wilkinson, Esq., Acting Law Secretary.

Wednesday, December 13th, 1876.

This case was continued from the 8th instant, being a charge by Suzaki Sajiro, a Japanese *sonin*, against George Shiras, a blacksmith residing at No. 113, Creek, for having assaulted him with a stone on the morning of the 3rd ultimo.

His Honour said that he understood complainant had received some compensation for the bodily injury received by him at the hands of the accused, and was asked if such was the case.

Geo. Shiras replied that he had paid complainant $20 to meet the expenses incurred through this mishap.

When accused was asked to make any statement, Shiras said that if the amount given by him as compensation were sufficient, he did not think it necessary to make any statement.

His Honour said it was not for him to judge as to the sufficiency of the compensation. The accused must not imagine that he could allow the matter to be compromised in that way. The case had been adjourned from Friday to permit him to make all due recompense for the harm done to complainant, and he hoped such had been made.

Defendant then stated:—I am a blacksmith at No. 113, and on the day in question I was shoeing a horse. The *betto* was in a hurry to be off, and as there were some coolies with a cart in the way I cried to them to clear out. They would not, and I took up a stone and threw it, without the slightest intention of harming anyone, but it glanced off a stick and hit complainant in the eye, but did not hurt him much for no blood appeared. I have made amends for the accident by paying the doctor's fees.

His Honour said he did not believe the stone had been thrown at complainant intentionally, and he would therefore only fine the accused $1 and costs.

THE DECLINE OF REASONABLENESS.

(Pall Mall Gazette.)

We are apt to look upon the habits of mind that prevailed in the last century with a feeling of estrangement sometimes approaching to contempt. Our ancestors of the Georgian times seem to us cold and superficial in their dealings with great matters: we marvel, not without a touch of envy, at the compact and complacent view of the world they were able to take, and console ourselves by thinking that it was purchased at the cost of depth and earnestness. We soar in boundless ether on the wings of speculation, and rush violently down steep places to choke ourselves in unfathomable doubt, and flatter ourselves that we shall be rewarded by arriving at something much grander than could be attained by plodding along on the ordinary levels of earth. This may perhaps be so: though it does curiously happen that for the most part the steady going simple minded folk who think of nothing but their own work are still for the most part those who make discoveries, leaving to moralizers of all sorts—who may seem to their hearers to be persons of loftier aims and larger sympathies—the task of accompanying them with a chorus of *Laudamus* or *De profundis* according to their humours and inclinations. However we have not got the blessings of earnestness and enthusiasm, whatever they may be, without paying a price for them. There is one of the qualities indispensable to a healthy mind in which we have made very little advance for the last century, or have perhaps even gone back. Language is not really adequate to deal with the subtle variations of character in one man's life, much less in a nation's; but the best name we can find for what we now mean is *reasonableness*. This is what we find in the leaders of English thought, however great their differences in other respects, in the period which may be said to begin with Locke and end with Gibbon: the keeping of an even and open mind towards all sorts of questions,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the calm and candid endeavour to do the best work that could be done with such materials as were to be had, coupled with a settled resolution not to be tempted from this to any enterprise of making bricks without straw to build castles in the air withal. They did not talk much about the duty of seeking truth, nor did it so much as occur to them to discuss whether truth might have diverse weights and measures for different kinds of inquiries. But they quietly sought it, using their common sense impartially in all directions, holding fast so much as they could find, and being content therewith; and, strange as it may seem to us in these latter days, and especially to those who profess various forms of enthusiastic belief, they did by these humble means find a good deal, and in many ways founded the house of knowledge so solidly that we can now afford to take our diversion in dancing (or on occasion a free fight) on the upper floors in tolerable safety. And there are certain points of method in which it would be not amiss at this day to pay more attention to their example. First, they were thoroughly convinced of a principle which lies at the root of sound and reasonable thinking; namely, that all our knowledge is only probable. One may find them, of course, making divers assertions as to matters of fact, and making them with apparent confidence, which the later advance of knowledge has shown to require correction or even reversal. But not the thing asserted is here material, but the spirit in which it is asserted. And these men fully recognized that the search for truth comes at last to an estimate of probabilities. To take one conspicuous instance, the whole argument of Butler's great work is founded upon this. They held to the beaten road of experience, and would not be decoyed to the right hand or the left by any of the short cuts of intuition or infallibility. Neither did they despair of knowledge because absolute certainty was unattainable, or rail at the world and esteem it not worth living in because men can ask more questions about it than they seem likely to find an answer for; but they held that notwithstanding the darkness of ultimate problems there are known means whereby we may learn such things as will suffice for the conduct of life. They counted man's life a thing to be enjoyed and improved, rather than a subject for theological apologies or invectives; and they chose not to trouble themselves overmuch with considering why the world is not absolutely good, finding that at all events it is good enough to be worth making the best of. And this frame of mind went along with a loyalty to the truth, and a belief in the singleness of it, which were not the less potent for not being loudly proclaimed. As we have already hinted, these men never supposed that the measure of truth varies according to the inquirer's personal interest in the question. They knew nothing of the transcendental assurance that scorns ordinary proof. It was taken for granted among them that there is but one and the same way of discovering truth in great matters and in small, and that time is wasted in looking for a royal road to evade Nature's toll of labour and patience. They felt that it is the business of a rational man under all circumstances and without distinction of topics to observe facts and exercise his common sense upon them—at some risk, of course, of being wrong after he has done so; but on pain of being all but certainly wrong, and that in a much less hopeful or profitable manner (for the mistakes of genuine seekers are often fruitful), if he should do otherwise. In short, we find in them the temper in which it becomes a wise man to face difficult inquiries; a high-minded simplicity in the conception of their aims, a straightforward industry in pursuing them, and a moderation of desire which, proceeding not from a slavish humility, but from a just estimate of man's powers and a cheerful acquiescence in the conditions imposed upon them, in nowise hindered the strength and thoroughness of their work.

If you look now to our present condition in these respects, we cannot pronounce it wholly satisfactory. Not that the real leaders of knowledge have fallen off either in single-minded devotion to truth, or in the cautious and steadfast moderation that bespeaks the true scientific mind. The contrary is every day made manifest in their works. But the number of persons to whom those works are more or less known is out of all proportion greater than it has ever been before. And hence arises a mischief which only the still continuing spread of knowledge, becoming deeper as well as broader, can be trusted to cure. Not a few of the would-be learners go away with information that is not in truth worthy to be called learning. They possess themselves of the results, but have no understanding of the methods which led to them, and have therefore no clear apprehension of the limits within which they are to be accepted, or even of the significance of the results themselves. They run away with approximate statements and take upon themselves to draw absolute conclusions from them; and this not only to their own discomfiture, but to the discredit of science in general. For persons of ordinary instruction will not always be at the pains to distinguish the superficial dogmatism of second-hand expounders from the decided but measured language of those who speak of their own knowledge; and there springs up a vague mistrust of a certain "scientific arrogance" which is unjustly ascribed to men of science at large. But the very people who denounce "scientific arrogance" are only too glad to fall into it themselves when it suits their purposes. They will declaim against a probable hypothesis, avowedly put forward only as an hypothesis, as a work of rash and impious presumption, and yet they will not shrink from taking up some unsettled or even extremely doubtful physical supposition and deducing from it by way of infallible demonstration a variety of consequences which they are pleased to suppose to be for the glory of the Creator and the edification of intelligent creatures, as many as they can get to listen to them. The mischief of the dogmatism that springs from half-knowledge is much increased by another sort of dogmatism which sets itself up beside or against knowledge altogether. Whether in alliance or in conflict, the two react upon and foster one another. Pretensions are openly made, and are often maintained with great ability and eloquence, to the possession of sources of certainty different in kind from the means by which men are accustomed to assure themselves of matters of fact for the purposes of ordinary life. Hence our generation reaps a rich and tangled crop of moral and political hallucinations, sentimental theology, and pseudo-scientific fancies; hence are born the various philosophies, Protean in their shapes, as is the way of nerveless creatures, whose secret is summed up in the one article:—I *will* believe it because it is nice; hence we have learned the habit of dallying with falsehood and imposture, while we cloak a diseased mental craving under the specious name of candid investigation—an art in which we have so far advanced that educated society can find its pastime on the verge, for aught we know yet, of a European war, in gravely discussing the inspiration of a crumb of slate-pencil and surmising that after all there must be something in it. Here candid investigators will probably charge us with "scientific arrogance." How do we know what is possible? or how do we know that the laws of nature are immutable? Truly, we do not profess to know; we are content with a practical judgment of probabilities. It is possible that all the analogies of sane human experience may be wrong; but we shall try a good many other hypotheses first. It is possible that stores of energy hitherto overlooked by science should produce the same sort of effects under the same sort of conditions, which one would expect beforehand to be produced by the familiar agencies of human trickery; it is possible that the ordinary symptoms of an epileptic delusion should in one singular case be the marks of a divine or a revelation; but it may nevertheless be more probable that A is a clever rogue who has not—or has—been found out, and that B and D, very worthy and even intelligent persons, who have been deceived by A, than that all the foremost observers of nature from Archimedes to Faraday should have been purblind.

But this is only one extreme instance of the pains and penalties that visit us for crude and partial knowledge, and still more perhaps, for want of disinterestedness in the pursuit of truth. We profess higher motives than our fathers, but none the less pick and choose facts to suit our preconceived notions. Nowadays almost everybody has a system, and it is hardly possible for a man with a system to be reasonable. There are few controversies on which we might not moralize from this text. After all our soarings and declamations we shall perhaps come round to the ways of the despised eighteenth century and the common sense of mankind. Two years ago Professor Jowett advised theologians to go back and take up the reasonable and truly scientific handling of their theme where Bishop Butler left it. The advice was little relished at the time; but we hear that it may meet with more attention now that it has been in substance repeated by the Archbishop of Canterbury.

Mr. Peters, of Arbroath, second mate of the *Strathmore*, at the time of the wreck on the Crozet Islands, was last week presented with a medal by the Board of Trade, in recognition of his services at the time of the wreck, and also for aid rendered to the sufferers during their long captivity. A letter from Miss Worsley, the lady who survived, was read, in which she bore testimony to the gallant conduct of Mr. Peters. In reply Mr. Peters said that should circumstances unfortunately require his services again, he hoped he would be found ready to perform his duty.—*Pall Mall Gazette.*

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—During the past week the market has been very irregular. The fact of some holders having shown a disposition to accept very low prices brought forward a few buyers, but sales have not been satisfactory, and generally made below quotations.

Grey Shirtings:—								
7 lbs.	38½ yds.	39 in.	per pce.	$1.50 to $1.90	White Shirtings:—			
8 lbs.	38½ yds.	44 in.	,,	1 90 to 2 40	60 to 64 reed 40 yds. 35 in.	per pce.		2.20 to 2.40
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.70 to 2.40½	Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb.		0.75 to 0.92½
9 lbs.	38½ ,,	44 in.	,,	2.25 to 2 70	Black Velvets			7.50 to 8.50
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.60	English Drills 15 lbs. 40 yds, 30 in.			2.60 to 2.70
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1 25	Taffachelass	12 yds, 43 in.		2.00 to 2.25

Yarns.—

No 16 to 24	per picul...	$28 00 to 32 00	No. 38 to 42 ...per picul... $38.50 to 41.50
No. 28 to 32	per picul...	$30 00 to 35 00	Reverse Twist 16-24 ,, .. $30.00

Woollens.—The dullness we have formerly complained of still prevails, and there are no fresh transactions to record with the exception of some small sales in plain *Mousseline de Laines* at considerably lower rates. Prices for all other articles must also be quoted considerably lower, although entirely nominal, as there is no business doing to test them.

Plain Orleans	40—42 yds.	32 in.	4 75 to 6.75	Figured Mousseline de Laine	30 yds.	30 in...	0.25 to 0.30
Figured Orleans	29—30 yds.	31 in.	4 25 to 5.25	Multicolored ,,	30 yds.	30 in...	0.30 to 0.36
Shimagoro	30 yds.	30 in.	4.00 to 5.25	Cloth, all wool plain or fancy	48 in. to 52 in...		0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0 24 to 0.33	Presidents	54 in to 56 in...		0.75 to 0.80
Camlet Cords	29—30 yds	32 in.	5.75 to 6.00	Pilots	54 in. to 56 in...		0.45 to 0.60
Camlets Asstd.	56—58 yds.	31 in.	16 50 to 17.50	Union	54 in. to 56 in...		0.60 to 0.75
Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00	Blankets, scarlet & green	6 to 8 lbs...	per lb	0.42 to 0.48
Plain Mousseline de Laine	—30 yds.	30 in.	0.17 to 0.19				

Sugar.—Our market is rather weak and we have no transactions to report.

Sugar:—Takao in bag	per picul...	$4 40	China No. 4 Kook-fah ...per picul.. $6.00
,, in basket	,,	...$4 20	,, No. 5 Kong-fun ,, ...$5 40
Taiwanfoo in bag...	,,	...$4.30	,, No. 6 E-pak ,, ...$4.50
do. in basket...	,,	...$4.10	Swatow Brown ,, ...$3.40
China No 1 Ping-fah	,,	...$7.75	Daitong ,, ...$3.80
,, No. 2 Ching-pak	,,	...$7.10	Japan Rice ,, $2.30 to $2.35
,, No. 3 Ke-pak	,,	...$6 50	Kerosene Oil $3.90

Kerosene Oil.—The market a little weaker through forced auction sales.

EXPORTS.

Silk.—Since our last a considerable change has taken place in the market.—Telegrams having been received which encourage the expectation of the maintainance of peace in Europe, prices have rapidly risen, and close firm at the following quotations, which, compared with the previous ones, and taking into account the rise in the rate of exchange, show an advance of 10 to 12 per cent. on the laid down cost.

Deliveries since the 9th instant are nearly 600 piculs, and the stock is decreasing. Oshius have a large share in the demand, and some parcels of filature silk are held at $1,000.

	At Exchange 4/5½ in London.	*At Exchange 5.70 at 6 m.s. in Lyons.*
Hanks.—Best No. 1 & 2	$850 to 850	32/5 to 33/2 91 to 93
,, Good No. 2	$800 to 810	31/3 to 31/8 88 to 89
,, Medium No. 2½	$770 to 790	30/2 to 30/10 84 to 86
,, C'mon. No 3	$710 to 760	29/2 to 29/10 81 to 83
,, Inferior No 4 & 5	$680 to 720	26/10 to 28/4 75 to 79

	At Exchange 4/5½ in London.	*At Exchange 5.70 at 6 m.s. in Lyons.*
Oshiu—Best	$750 to 780	29/5 to 30/6 82 to 85
,, Medium to Good	$720 to 740	28/4 to 29/2 79 to 81
Kakeda—Best	$900 to 930	35/ to 36/1 98 to 101
,, Medium to Good	$830 to 850	32/5 to 33/2 91 to 93
Filature Silk	$880 to 950	34/3 to 37/ 96 to 103

Tea.—The closing week has been devoid of interest in our Tea market, most buyers holding aloof, and operations which are small and unimportant being principally for Californian orders. Settlements only amount to 900 piculs.

Advices from New York seem growing more discouraging daily, and with current rates of exchange and high steamer freight, no chance of margin is left for shippers. The season is fast drawing to a close and the experiences of the last two years would tend to show that late shipments would hardly pay even if the first cost was almost nominal. We therefore are inclined to fix our total export for season 1876-77 as being rather under than over 22 million pounds, unless a very improved state of affairs can be reported on the American markets, and further orders are sent out for execution here.

Common	$ 9.00 to 12.00	Fine	$25.00 to 28 00
Good Common	13.00 to 15 00	Finest	32.00 to 36 00
Medium	16 00 to 18.00	Choice	nominal
Good Medium	19.00 to 21.00		

EXCHANGE AND BULLION.

Exchange.—Rates have been very firm throughout the week, touching 4/5¾ for 6 months' sight, but something like a panic has set in at the close, and rates are nominal at 4/4 for 6 months' sight Bank Bills; no Private Paper offering.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 4d.	On Shanghai—Bank sight	75
,, Bank Bills on demand	4s 3d.	,, Private 10 days sight	76
,, Private 6 months' sight	4s. 4¼d.	On New York—Bank Bills on demand	102
On Paris—Bank Sight	5.40	,, 30 days sight Private	104
,, Bank 6 months' sight	5.50	On San Francisco—Bank Bills on demand	102
,, Private 6 ms. sight	5.62½	,, 30 days sight Private	104
On Hongkong—Bank sight	par.	Kinsatz	387
,, Private 10 days' sight	¼ % dis.	Gold Yen	387

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 52.] YOKOHAMA, SATURDAY, DECEMBER 23, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its efflux.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The news from Nagoya concerning the Mi ye *ken* is sufficiently alarming. Telegraphic despatches announce that a serious disturbance has broken out among the farmers of Isé, who seem to have given way to uncontrolled riot, the cause being their objection to the new mode of levying the land-tax. The outbreak commenced at Kumodzu, the rioters from which place were quickly joined by some from Uyeno, Kambé, Yokkaichi and Kuwana in the Mié *ken*, and others from the neighbouring Aichi *ken*. As they gained in numbers they seem to have increased in violence, and it is reported that the important towns of Tsu and Matsuzaka, and the smaller ones of Uyeno and Shiroku have been set fire to, and it is also feared that Yokkaichi has not entirely escaped. Traffic along the Tokaidô is interrupted. Mr. Kitadai, *Gen Daijô* of the *Naimusho*, with other officials and a strong force of police, have been despatched by steamer to the disturbed district, and it is to be presumed that the troops of the Nagoya garrison will be called upon to assist in suppressing the riot.

The affray between the sailors of the *Vineta* and the native population at Takashima-chô on Wednesday evening, is the more to be deplored on account of the previous excellent behaviour of the men, to which ample testimoney has been borne. It is yet unknown what was the origin of the disturbance, nor can we doubt that the horribly poisonous liquors sold in the town had something to do with it. The men become easily inoxicated with these, become quarrelsome, possibly among themselves, begin to hit about indiscriminately, and a row ensues. The police are summoned, and the only way in which small men can cope with large men is by the use of weapons of some sort. A man falls and he is instantly struck on the head to prevent his rising. The intention may not be to kill, but he is killed nevertheless, and two fine men, full of health and vigour an hour before, never returned to the ship alive. We doubt whether much will come of the enquiry now being made into the matter. The foreigners, who certainly are nearly always at fault, at least in the beginning of these frays, try to screen themselves and each other, and no one can prove who gave a fatal blow in a night attack. But the affair is very sad, and while we quite appreciate the difficulties of the police, these blows at the back of the head revealed by the *post mortem* examinations, show that men are violently struck from behind. In dealing with large drunken men the Japanese should be taught to trust to their activity rather than to savagely heavy blows with their truncheons.

It was generally known that the prolonged visit to Tôkio of Mr. Oyama, Governor of the Kagoshima *ken*, was due to the indisposition of the Satsuma men to accept the late measure of the Government for the capitalization of the pensions and hereditary incomes of the nobles and gentry. They pleaded that in view of their renowned and steadfast loyalty, and the prominent part they had played at the time of the Restoration, their pensions should be secured to them *in perpetuo*. But it was obvious that this involved a very grave injustice to the people of all the other *ken*, and the demand, would, if complied with, tend to perpetuate that very independence of the Satsuma men from the control of the Central Government, which has been one of its most embarrassing difficulties since the Restoration. But the case was admittedly one for compromise. The demands made by the *ken* were extravagant, inasmuch as compliance with them would have involved the concession of a practical autonomy to the province, and have left pure feudalism intact in one portion of the Empire, from all other parts of which it had been swept away. But there is apparently a general feeling abroad in the country that some special concession may not inequitably be made to the Satsuma men on the ground of their past services to the Imperial family, and though it cannot take the form which they demand, it may serve to record the value set upon those services. If we judge correctly—and it is somewhat difficult to do this—the measure lately issued under the hand of the Prime Minister, and embodied in a translation elsewhere, entitled 'The Commutation of Pensions Measure,' is the compromise offered to the Satsuma men by the Government on this question. It seems to grant an extended time rather to the larger than the smaller pensions, which must be the most numerous, and thus conciliates the higher rather than the lower and more numerous class of pensioners. But it may be presumed to represent terms which Mr. Oyama knows that the men of the *ken* will accept, and thus we may fairly hope that the forebodings of the writer in the *Chôya Shimbun*, whose article we reproduce, are groundless.

It appears that the Community are unwilling to pay for the expense of lighting the streets with gas. The settlements has, we understand, been thoroughly canvassed, and the result is that subscriptions are promised to the extent of $280 (with probably another $20 or 30) per month. The total sum required was $420 per month for lighting the streets every day throughout the year, but as it seems useless to expect such a sum to be forthcoming, the Committee will endeavour to make the amount promised up to about $350, which will enable them to conclude a contract for lighting the streets about 23 days in the month, thus dispensing with the lamps on such nights as the moon gives the necessary light.

The members of the Club Germania gave a most successful entertainment last night to a large number of invited guests, commencing with a performance by their Dramatic Corps of

two pieces of which the following are epitomes, both affording unbounded amusement to the audience.

1733 THALERS, 22½ SILVER GROSCHEN.

Külbchen, a speculator in houses, and the husband of *Malwine*, (their daughter *Julie* being about to be married to *Paul Selling*, a book-keeper,) is haunted by the fact that he is daily robbed—he knows not how or by whom—to the extent of seven and a half groschen. He conceals the fact from his wife, but confides it to his friend *Krähhahn*, who is invited to the wedding. *Malwine*, whom *Krähhahn* has gallantly saluted on discovering her to be the wife of his old friend, also confides to him that, distrusting *Külbchen's* mania for building, she has taken the daily missing sum from her husband's *porte-monnaie*, in order to set it aside as a portion for *Julie*, and begs *Külbchen* to present the proceeds of her motherly duplicity to the bride as his own gift. He consents, but, being something of a rhymster, preludes his offering by some old lines which he had introduced into *Malwine's* bouquet-holder on the occasion of her own mariage many years ago. *Külbchen*, who saw *Krähhahn* salute *Malwine*, and remembers the verses, is suddenly fired with the suspicion that his wife and his friend have concealed from him an old passion by which he has been deceived, and the magnitude of the sum presented by *Krähhahn* to *Julie* inflames this suspicion. All is explained when arithmetic proves that the sum only represents the provident little embezzlements of which *Malwine* has been guilty in *Julie's* interest; *Külbchen* regains his long lost equanimity, and his wife and friend are restored to his confidence.

THE SUNDAY-SPORTSMEN.

Schnubbe, a miller, has a niece, *Eimile*, beloved by and in love with *Edward*, whom *Schnubbe* dislikes and threatens to shoot if he comes near the mill.

Kinne and *Lademann* are two Sunday-sportsmen who resort to the neighbourhood of the mill, and one of whom, in the momentary absence of the other, buys a hare from a peasant, pretending he has shot it, which proves to be nothing less than a stolen and murdered pet of *Emilie's*.

The lovers concoct a plot to frighten *Schnubbe* into compliance with their wishes, and he is led to believe that he has shot *Edward*, at whom he presented and fired his gun, believing it to be unloaded. As *Edward* falls, pretending to be wounded, two other shots are heard which come from the cockneys, who thought the rustling of the bushes betokened the presence of game, and who are horrified to find that a man said to be dying has been carried into the mill. All are thus seized with the fear that they have killed *Edward*, and the complication is increased by *Emilie's* laments over her hare "*Peter*," whose name is presumed by the cockneys to be that of the wounded man. Each tries to exonerate himself and throw the blame elsewhere, though convinced that he is the author of the mishap, which can only be concealed by putting the body into a sack and throwing it into the mill-stream. Edward, feigning death, is about to be thus disposed of, when, during the momentary absence of *Lademann* and *Schnubbe*, he asserts his uninjured condition, leaps from the sack, throws it over *Kinne*, and tells him not to move if he values his life. *Emilie* suddenly cries out that *Edward's* friends have come in quest of him, and the miller, thinking that all is lost, bewails his harshness towards him, and vows he would gladly give his niece to him were it now but possible. Edward steps forward, takes the miller at his word, claims and embraces *Emilie*, and all are relieved from their embarrassments.

By the kind permission of the Captain and Officers, the band of H. I. G. M.'s S. *Vineta* was in attendance, and at the conclusion of the dramatic performance dancing was commenced and kept up until a late hour.

Mr. C. W. Goodwin left for Shanghai in the *Hiroshima Maru* on Wednesday last to assume the duties of Acting Chief Judge of the Supreme Court of China and Japan.

The long felt want of a system of Pilotage Regulations has been filled by the issue of a code under the hands of the Prime Minister. It will be found *in extenso* elsewhere.

In the Kanagawa Saibansho judgment was this morning given in the case of Malcolm, Willcox & Co., *v.* Yokoyama Yensuke, in favour of defendant. The Court found plaintiffs plea that the velvet in question was according to sample quite contradicted by the evidence, and, in consequence, defendant was quite justified in refusing to take delivery of the goods, and therefore gave a verdict in accordance.

The P. M. S. Company intend to despatch the *Alaska* for San Francisco on Wednesday, the 27th instant, at daylight.

From the "Japan Mail Daily Advertiser."

Monday, 18th.

From the *Akébono Shimbun*.

The departure of Government officials for the Bonin Islands has been delayed till the 20th instant, as the vessel which is to take them there is not fully prepared for the trip yet.

From the *Nichi Nichi Shimbun*.

Mr. Iwakura will leave Kiôto to return to the capital on or about the 20th instant.

From the same.

The police force which was sent to Yamaguchi *ken* during the rebellion returned to Tôkiô on the 14th instant.

From the same.

The head office of the Department of Railways has hitherto been stationed at Osaka, but will shortly be removed to Shinbashi, Tôkiô.

From the *Hôchi Shimbun*.

Mr. Takagi Samuro, the Japanese Vice-Consul at New York, has been promoted to the post of Consul.

From the same.

The families of the six policemen, and a messenger of the 4th Police Station in Tôkiô, who came to an untimely death by an accident during the late fire, have all received 130 *yen* as compensation.

From the same.

A fire broke out at Niigata on the 8th instant which destroyed 55 houses.

From the same.

Three years have now passed since the Ohno Bank failed, with liabilities to the extent of 3,500,000 *yen*. On and after the 19th instant the directors will endeavour to make such arrangements with the creditors of the Bank that business may be resumed early next year.

From the *Chôya Shimbun*.

Mr. Yano, the editor of the late *Saifu Shimbun*, has been found guilty of treason in having published in No. 57 of his issue, dated February 15th, 1876, the following:—"Should the Government on some future day cause mal-administration and bring misery upon the people thereby, it would be reasonable to change such a Government, as Mencius has said that "when the country is in danger the ruler should be changed." For this offence Mr. Yano has been sentenced to 18 month's imprisonment, but being at present incarcerated for an offence against the Press-laws, the time he has already served of the first sentence has been deducted from the last one, leaving him a balance of nearly 15 months to remain in prison.

Tuesday, 19th.

From the *Hôchi Shimbun*.

The *Hiroshima Maru* brought from Osaka on the 19th instant 370,000 *yen* in silver coin, and also 307 sheep from Shanghai for the Department of Agricultural Industry.

From the same.

A newspaper to be called the *Kwanpu Shimbun* is to be published at Kôfu in Kôshu.

From the *Nichi Nichi Shimbun*.

A fire broke out at Kitaômon-chô, Tôkio, at 5 p.m. on the 16th instant which destroyed nine houses.

From the same.

The editors of the newspapers of Tôkiô held a meeting at a tea house at Nabe-chô, Tôkiô, on the evening of the 16th instant.

From the *Chôya Shimbun*.

Fifty police constables with five sergeants started from Tôkiô for Ibaraki *ken* at 3 p.m. on the 16th instant.

From the same.

Mr. Oyama, the editor of the *Kanayomi Shimbun* of Yokohama, was fined 10 *yen* on the 15th instant for an offence against the Libel-laws.

From the same.

It is reported that a disturbance has arisen in the Kagoshima *ken* (Satsuma) which the elder Saigo tried to suppress, but, failing in his efforts to do so, he fled and hid himself among the hills.

From the *Mainichi Shimbun*.

While the steamer *Tsuruga Maru* was on her way to Kishiu from Osaka on the 19th instant, she was caught in a violent gale and driven on shore on the Kishiu coast.

Wednesday, 20th.

That game is not so scarce in Japan as many people think is shown by the fact that a shooting party, a few days ago, bagged 27½ brace of pheasants and a couple of woodcock in a day and a half, there being only two guns for the first half day, and three guns for the succeeding day. This is perhaps the best bag ever made in Japan.

We were yesterday informed by the Agent of the Great Northern Telegraph Company that the cable between Nagasaki and Vladivostock is interrupted.

From the *Chuga Shimbun*.

The large number of Japanese living at Shanghai are greatly inconvenienced because they have no medical men of their own nationality amongst them. Chinese doctors are too ignorant and untrustworthy, and to employ European or American doctors is too expensive, so the Japanese priests of the Shinshiu sect of Buddhists, who have an establishment in Shanghai, are about to attach a hospital to it which will be under the care of Japanese medical men skilled in the western school of medicine.

From the same.

As the Mikado will pass through Yokohama next January on his way to Kiôto, the various Government buildings will be decorated on the occasion.

From the same.

A certain Mr. Scott has purchased 25,000 boxes of matches manufactured by men who are now undergoing imprisonment with hard labour at Tobe, Yokohama, and has sent them to Shanghai.

From the *Akebono Shimbun*.

The powder magazine of the Army Department is to be removed to Itabashi, Tôkiô.

From the same.

An epidemic has broken out among the horses in the capital, to which many of those in the Imperial stable have succumbed.

Thursday, 21st.

About seven o'clock last night a quarrel arose in Takashima-chô among a number of sailors from the German corvette *Vineta*. The origin of the row is unknown, but the result was a general attack by the sailors on all who came within their reach, and the destruction of the furniture of the house they were visiting. The police from the station close at hand attempted to check the destruction which was going on, but were assaulted by the sailors and put to flight, being closely pursued along the road by their assailants, who broke many of the *jinrikishas* they came across, assaulting the coolies. Assistance was sent for, meanwhile, to the Central Police Station, whence a large force was despatched, which arrived at the scene about eight o'clock, to find that the disturbance was over, but with the sad result that in the general fight which seems to have occurred a German sailor had been killed by a blow on the forehead, two others had suffered contusions, while some of the *jinrikisha* coolies and policemen had been severely handled. At present it is unknown by whose hands the German sailor met his death.

From the *Akebono Shimbun*.

As His Majesty the Mikado will preside over the opening of the Railway when at Kiôto in January next, preparations are now being made for that event.

From the same.

Mr. Mutsu will act as Vice-President of the *Genrô-In* during the absence of its President, H. I. H. Arisugawa no Miya, who will accompany H. M. the Mikado to Kiôto next month.

From the *Chuga Shimbun*.

The session of the *Genrô-In* was closed to-day (20th inst.), without any ceremony. The newspapers were in error in reporting that it was the intention of H. M. the Mikado to be present on the occasion.

From the *Mainichi Shimbun*.

A letter from Kagoshima *ken* (Satsuma) states that the elder Saigô and about ten others are about to start from that *ken* for Tôkiô.

From the *Nichi Nichi Shimbun*.

H. I. H. Arisugawa no Miya has invited the members of the *Genro-In* to dine with him at the Rikiu palace, Shiba, to-day (the 20th instant).

From the same.

Sixty *shizoku* of Fukushima and Awomori *ken* enrolled themselves in the police force of Tôkiô recently.

From the same.

The machine shop which has been established by the Bureau of Police has succeeded in turning out two fire engines constructed after the foreign plan, of which a trial was made yesterday.

From the *Hochi Shimbun*.

The crop this year in Aichi *ken* (Owari) has been a failure, and the farmers have been greatly distressed thereby. In consequence they have found the new land-tax press heavily on them, and have therefore met together to devise some means of escaping it, there being a great disinclination on their part to pay it.

Friday, 22nd.

The Agent of the Great Northern Telegraph Company yesterday informed us that the Singapore and Penang cable was interrupted. It seems that this cable has been out of order for some time, but the Eastern Extension Company expect now to restore communication in a few days. The last message received through this line from London was dated the 16th instant, and the latest viâ Vladivostock the 18th instant.

The Great Northern Telegraph Co.'s steamer *H. C. Orstad* was expected to arrive at Nagasaki from Shanghai last night, in which case she would proceed to Vladivostock at noon to-day for the purpose of repairing the cable.

The following appeared in the *Japan Gazette* yesterday evening.

To the Editor of the *Japan Gazette*.

SIR,—It has been represented to me by a friend that in making use of the epithets I employed in my former letter to you I subjected myself to the imputation of having been actuated by feelings of animosity against the gentleman who edites the *Japan Mail*. I wholly disclaim such feelings, and all intention of having wished to gratify personal ill-will towards him. My letter was written, principally on public grounds; and as a protest against what I considered to be violent and unjust attack on the private character of an absent man, who filled a position of public trust in this country, and that position, in my opinion, honorably and efficiently. But in wording the conclusion I drew from these premisses, I had no wish to impute personal cowardice, or falsehood, to the Editor of the *Mail* in his private capacity; and as it appears that my letter may admit of that construction, I, in that sense, withdraw the offensive expressions which it contains.

Yours faithfully,

E. P. S.

Yokohama, December 21st, 1876.

From the *Hochi Shimbun*.

H. E. Iwakura will leave Kiôto for the capital on the 23rd instant.

From the same.

A newspaper to be called the *Meirin Shimbun* is about to be published in Tôkiô.

From the same.

The *samurai* of Kagoshima *ken* assert that they will not obey the orders of any one belonging to another province who may receive an official appointment in their *ken*.

From the *Nichi Nichi Shimbun*.

Some armed men entered the branch office of the Mining Department at Miyeke in Hiuga, attacked and wounded two

Digitized by Google

of the messengers and killed outright one of the officers, and then retired without having stolen anything.

From the same.

Three men have been arrested in the Yamagata *ken* charged with forging *satsu*, and have confessed to having passed spurious paper money in the Miyagi *ken* to the extent of 140 to 150 *yen*.

From the same.

An Exhibition will be opened at Kiôto on the 13th of March next and continue during the term of 100 days.

From the same.

The construction of the railway between Kiôto and Kusatsu on the Tôkaidô will certainly be commenced in January next.

Saturday, 23rd.

A few words are necessary in regard to a letter cited from the *Japan Gazette* which appeared in our issue of yesterday.

The draft of that letter had been submitted to the Editor of the *Japan Mail* for his approval, and had been accepted, with the exception of the words "in that sense" in the concluding paragraph, and a verbal alteration unnecessary to notice here. At the interview with the gentlemen with whom the negotiation was conducted, the above passage was objected to, and the intention was to sustain that objection throughout, as the expression obviously destroyed the absolute character of the retractation demanded of the offensive expressions previously used. The gentlemen in question, however, do not appear to have fully comprehended that the objection was sustained to the end of the interview, and, being under the impression that it was dropped as unimportant, brought about the publication of the letter in its present form.

The appearance of the latter in this journal is capable of very simple explanation.

Circumstances prevented its being more than glanced at on its appearance; the wording of it being already familiar to the person principally interested, who was only concerned in the fact that it had appeared, as stipulated. The objectionable passage thus escaped notice, and the letter was further published in this journal by the Manager at the written direction of the Editor, without more accurate note being taken of its contents.

The inadvertence is one which the Editor has much reason to regret.

It only remains for him emphatically to disclaim any intention of regarding the letter as a sufficient, or, indeed, any apology.

The game of foot-ball which was played yesterday, Yokohama *vs.* Yedo and H. M. S. *Modeste*, resulted in a victory for the latter by one goal—the only one kicked—after some good play.

The *Mainichi Shimbun* says that a report has been received that a large number of people—whether *shidzoku* or farmers is not stated—have assembled together in the Miyé *ken* (Isé) with the avowed intention of presenting a petition to the Government, for which purpose they had proceeded as far as the province of Owari, when two companies of troops from the Nagoya garrison were sent to meet them to prevent any disturbance taking place.

From the *Nichi Nichi Shimbun*.

The new building for the *Daishin-In* having been completed, it will be used for the first meeting of that Court next year.

From the *Akébono Shimbun*

A society has been formed at Tôkiô for the purpose of teaching the blind to read, and His Majesty the Mikado has graciously presented three thousand *yen* to their institution.

From the same.

The Mitsui Company are about to ship eighty thousand bags of rice from Nagasaki to America.

From the *Chôya Shimbun*.

A report was received by the *Sei In* on the 19th instant that the disturbance in the Ibaraki *ken* had been completely and satisfactorily settled.

From the same.

Mr Obana and twenty seven other Government officials started for the Bonin Islands on the 22nd instant.

From the same.

The farmers of a village in the Ishikawa *ken* have sent a representative to the capital with a petition to the *Naimusho*, praying for some mitigation of the land-tax.

From the *Mainichi Shimbun*.

An inspection of proposed harbour limits was made on the 20th instant by officials of the Custom House and Kanagawa *Kencho*.

From the same.

The duties taken at the Yokohama Custom House from the 1st of January this year to the 20th of December, amounted to *yen* 1,476,511.16.

The *Shingking* repots that the *Lapwing* has been got off her uncomfortable position. She is now anchored off Hope Island and is making no water.—*Shanghai Courier.*

The *China Mail* is premature in its conclusion that China has seen the last of Sir Thomas Wade. Providence is inscrutable, and sometimes—to quote a local witticism—appears unscrupulous, and there is no knowing what may happen. But we can assure our contemporary that Sir Thomas Wade intends returning to the land of his adoption before twelve months are over. The *China Mail* comments upon the beauties of the Address presented to His Excellency with much becoming pathos, and it would be too cruel to throw cold water upon its raptures. Besides, many persons doubtless looked at it in a serious light—particularly those who signed the Address without reading it.—*Shanghai Courier.*

Our Hangchow correspondent writes on the 30th November—You will be pleased to learn that in passing through one of the gates of the city yesterday, I saw quite a number of people reading a newly put-up proclamation; and on looking closely at it found it was the one which the Chinese Government agreed to publish touching the recent settlement of the Yünnan affair. It is put up in such a place that all who pass through the gate of the city must see it, and it is thoroughly sheltered from both the wind and rain. Whether there are others, and, if so, how many of them there are in public places in the city, I have not yet heard.—*S. C. & C. Gazette.*

M. BOUSQUET ON JAPAN.

THE *Japan Herald* has published a good translation of a paper entitled 'Contemporary Japan,' written by Mons. G. Pousquet in the *Revue des Deux Mondes* and suggestive of a few observations which it may not be unprofitable to make now that the translation has been brought to a close.

After dwelling upon the contrast presented by the immobility of the Chinese and the desire for progress manifested by the Japanese, the writer seeks for the initial cause of the movement made by the latter nation during the last few years and finds it in "the insatiable vanity which forms the most prominent trait in the Japanese character." Admitting that vanity plays an excessive part in that character, we are strongly indisposed to attribute to this infirmity more than a limited share of the effort which we now see made around us. The acknowledgments constantly made by the public writers of the inferiority of the Japanese civilization to that of the western nations, would seem to justify us in this respect, and we are persuaded that the desire to embrace, and at merely to imitate, European ways of life and modes of thought, is the result of a real admiration for them, as contrasted with those derived from China and moulded by the action of the national mind into the form in which we see them at this day. In his analysis of the causes which conduced to make Boswell's *Life of Johnson* the incomparable book which it unquestionably is, Macaulay sums them up in the shallowness and boisterous inanity of Boswell's character. But, in a more profound analysis, Carlyle showed that whatever may have been the defects of the biographer's character or the deficiencies in his mind, his admiration for a truly great and admirable man was the key to all the humiliations to which he exposed himself, and the ridiculous positions in which he placed himself, in giving full rein to his veneration. Not can it be doubted which analysis is more consonant with what we know of human nature. The Japanese have been strongly impressed with what many of them have seen in Europe and here. Unlike the Chinese, who see, but do not perceive, they have permitted these things to take fast hold of their minds, and are determined to secure them for their own purposes and the elevation of their own condition. The transition may and must involve much incongruity and perhaps absurdity, but the fruits of all this new effort, ill-directed as it now often is, will be reaped by generations yet unborn, and assuredly redound to the welfare and elevation of the country.

Passing over the enterprizes in the control of which M. Bousquet's countrymen have been chiefly concerned, we arrive at his remarks upon the railways. Agreeing with him that the country is not ripe for a grand railway system, though quite convinced that some small extensions of the present system might be safely and advantageously undertaken, as we showed a short time back, we must object to his statement that "the railway costs in interest ten times more than it receives." This is really a very careless slip. One million sterling was borrowed for the construction of railways, of which four hundred thousand pounds have been paid off. Taking the interest of the remainder at £60,000 annually, and presuming, what is wholly unproved and most improbable, that the whole million was spent on the railway between Yokohama and Tokio, the income from the line, $400,000 annually, after deducting working expenses, say 50 per cent, nearly covers the interest now paid to the bond-holders.

M. Bousquet refers frequently and quite justly to the want of roads, and shows how it militates against the advancement of the country.

Referring to the Mint, he says that "it has had to suspend its labours owing to the want of raw material." But the last Report of the Commissioner of the Mint, published recently, shows that

21,224,511 gold and silver coins, and
87,667,082 copper coins of all descriptions were struck between the 16th August 1875 and the 30th June 1876. The total quantity of coin struck since the opening of the Mint is 291,024,233, but much of the coined gold and silver has left the country.

When the M. Bousquet says the labours of the Mint will soon be superseded by the manufactory of paper money annexed to the Ministry of Finance, we presume him to mean that further issues of paper currency are in contemplation. We believe him to be in error in this respect. Of course the renewal of a paper currency is one of the conditions attached to its continued existence, and the quantity of notes destroyed every year, on account of their worn condition, is very large indeed. There is also the printing of the bonds given to the nobles, gentry and *samurai* in lieu of their pensions, and this alone will give many months of employment to the paper-money office. Of course, in a country governed as Japan is, the issue of paper money is little more than a question of the discretion of the Finance Minister for the time being, and there is no security but his prudence and wisdom against over-issue. But we have abundant reason for believing that Mr. Okuma, the present Finance Minister, is fully aware of the danger of increasing the paper issues, and determined to reduce them as the condition of the finances permits him to do so. That the country is not burdened with its present issues must be abundantly clear from the fact that the paper floats at par with specie, which in the present condition of affairs no power on earth could enable it to do were they excessive. We have lately, under extraordinary circumstances, seen it standing at a premium of over 6 per cent, and though this disappeared when the exigency which caused it had passed away, the par value at which the paper stands is the measure and proof of the confidence reposed in it, and its moderate extent in relation to the trade of the country.

When M. Bousquet says that the Reserve in the Treasury, amounting at the time of which he wrote to 24,416,257 *yen*, is mostly of paper money withdrawn from circulation, we have much reason to think that he errs considerably. In one of a recent series of articles in this journal devoted to the Currency Question, we estimated the amount of specie in the Treasury at sixteen millions of *yen*, and did so on excellent data, and as the Reserve Fund is at this moment perhaps somewhat lower than it was at the time of which M. Bousquet speaks, (although we write in no assured conviction of this), the proportion of gold and silver to paper money is far greater than he would give his readers to understand, and the statement he has made on this matter is therefore, we think, without weight or sanction.

M. Bousquet leaves an impression with regard to the total debt and the amount of floating currency, which is far from accurate. The former is really not very serious, and by far the greater part of it pays no interest, because the debt is unfunded. The only charge on the nation in respect of it is the expense of its renewal, which is greater than the wear and tear of coin, but not so great as the interest on the value of an equal quantity of coin. Nor should be it be forgotten that a paper currency, on a

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

convertible basis, which we are anxious to see the currency of this country made, is a great boon. The total debt, exclusive of course of the bonds to be given to the nobles and gentry, is not much more than two years of income, and this cannot be called large. We do not wish to see it increased, but very few of the European nations, and those not the most prosperous, could show so small a debt relatively to their revenues.

Of the following paragraph we can make nothing whatever, and almost suspect that the translator has used the word 'discount' instead of 'premium,' for M. Bousquet had just been showing how the gold had run away. Besides, a knowledge of political economy does not bring about the results of which polical economy is the formulated science, any more than a knowledge of the movements and laws of the heavenly bodies gives us the power of regulating those movements.

In reading these figures it becomes natural to ask, how it happens that gold is not at an enormous discount as against paper? The rate of exchange does not even reach 5 per cent. The reason lies in the traditional habits of the people, who have more confidence in the *kinsatsu*, bearing the Imperial stamp, than in the easily and already often adulterated coins. The foreign commerce avails itself of this carelessness to lay hold of the precious metals, which accumulate in the vaults of the European banks; but this calm cannot last for ever: when the rising generation has acquired some idea of the laws of political economy, then it will understand how valueless is the money representative that has been placed in its hands; it will discover that it can purchase nothing in a foreign country, and a crisis will inevitably happen, whose consequences it is difficult to foresee.

The article is, on the whole, fairly accurate, and, in this respect, very unlike that of Sir CHARLES DILKE, lately reviewed. It is not very encouraging, indeed we think not sufficiently so, but it contains some good advice here and there which the Government would do well to lay to heart, and is evidently the result of experience and the study of good contemporary authorities.

THE LETTERS OF E. P. S.

WE regret that it should be necessary to occupy the attention of the Public with a purely personal matter, but, in view of the circumstances attending it, we shall make no apology for the following remarks.

A letter appeared in the *Japan Gazette* of Wednesday the 13th instant subscribed E. P. S., containing reflections, couched in terms which could not be overlooked, upon the author of an article, which had appeared in these columns on the previous Saturday, on the recent decision of the U. S. CONSUL-GENERAL in the case Tôkiô *Fu v.* J. M. Batchelder. The *gravamen* of the reflections was that the author of the article had made use of terms regarding Mr. E. PESHINE SMITH which were untrue, and that as Mr. SMITH had left the country, it was an act of cowardice so to pursue him. The name of the writer of the letter was at once demanded, but much time elapsed before it was given up, and then without his authority, his friend feeling that the absolute demand for its surrender could not longer be justly refused. Application was then made for an apology for the expressions which had been used, but unavoidable circumstances delayed the progress of the negotiations until Thursday last. An apology was then offered; an account of the circumstances attending its publication has been already laid before the Public and will be found elsewhere.

In the opinion of the gentlemen who acted as intermediaries in the case we are estopped from giving up the name of the writer of the letter, and to that opinion we shall bow. But we cannot defer to it further than this. The apology is one which is absolutely and obviously vitiated by the words objected to, and if different impressions existed in their minds from that which existed in the mind of the person most concerned regarding the intention to sustain the objection to those words, that person is quite willing to take the blame to himself for not having been more explicit. Suffice it, that no one with any regard for his honour would for a moment have consented to their remaining, and the explanation of the mistake is to be found in a difference of impressions unsusceptible of further analysis, or, at all events, impossible of discussion now.

Regarding the expressions applied to Mr. PESHINE SMITH, a word must be said. In certain letters which he had written to a Rochester journal, he had grossly traduced the character of all the foreigners resident in this country, whom he designated as a number of unprincipled, rapacious *thieves*. But of them he knew practically nothing. He may have been present in an official capacity at a dinner here or there—at which he habitually appeared in Japanese dress—but he was absolutely unknown in society, which refused to admit within its ranks a man so notoriously unfit for it. On the subject of this gratuitous libel on the foreign residents we wrote as follows on the 10th August 1872:—

With Mr Peshine Smith's other ignorant impertinences we have nothing to do. We shall occupy him alone on the opening sentences of his letter, which can bear but one construction, namely, that the majority of the foreigners resident in this country *are thieves*. Who Mr Peshine Smith may be: what he may have been before he came here: what he does here; and what he may be fit to do; we know no more than any one else who restricts his visiting to the society of decent people, among none of whom has Mr Pes'ine Smith, so far as we know, yet been seen. That such experience of the foreigners resident in Japan as Mr Smith has yet acquired may have been gained among the class he designates—for it would be idle to deny that there are bad men everywhere—we should think therefore probable enough; though, if an old adage be true, keenness in the detection of a thief has never yet been regarded as a sign of honesty. It cannot, however, but be regarded as suspicious, that a short comprehensive criticism of this kind should proceed from one whose name has become a bye-word among foreigners in Japan,—and with none less than with his own countrymen—as associated with the very worst appointment ever made by the Japanese Government. The history of that appointment we all know; and we shall do M. le Long the justice to say that no one openly expressed more irritation and disappointment about it than himself. We have understood that it was his intention at least to remonstrate with the State Department at Washington about it, and considering the ambitious programme attached to the appointment—nothing less than that the holder of it should have in his hands the whole foreign policy of this empire—we are not surprised at his vexation. Some little time back we did what lay in our power to shield Mr Smith from the ridicule he had brought on himself by a very silly letter which the inherited indiscretion of his family had allowed to be published in the States, the chief feature of which seemed to be the success with which, when presented to the Mikado, he palmed off upon the Court a pair of Chinese velvet shoes as black silk stockings. As a triumph of such diplomacy as may exhibit the limit of Mr Smith's power, if not of his ambition, he may fairly be congratulated on this success. At all events there is no record in the Government Gazette that any objections to his attire were raised by the High Chamberlain, nor does his letter home exhibit anything but the repose of a mind soothed by the attainment of its highest aspirations, at peace with itself and with the world. It is hardly fair to disturb the selfcomplacency of this lofty calm, and we would willingly have allowed Mr Peshine Smith to enjoy it unmolested. But his second indiscretion does not admit of our forbearance. He has taken on himself to speak of the foreign community in this country in terms which constitute a grave libel on it, and this we call on him to explain. We do this the more definitely that we have never yet hesitated to criticize with just severity any course of conduct calling for public remark, by which those high pretensions of foreigners to the possession of a purer code and a more severe practice of commercial morality than those observed by pagan nations, were belied But while we have done this, we have never for a moment denied that by far the greater part of the trade of the open ports is carried on by men whose just and honourable dealings have approved themselves as well to foreign as to native critics, whose words have been as good as their bonds, and whose standard of commercial morality is high and sound. And as foreign intercourse with this country has increased, men of all professions have been attracted hither, and among them are many men of high character and attainments. We shall not pretend that communities of mixed nationalities, like those resident in Japan, freed as they are from the pressure created by the accumulated moral, social and religious influences of many generations in old societies, can be advantageously compared with those of more settled societies. But we say that there is much orderly and excellent life, much

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

street and honourable conduct, [illegible] even and retirement here. All these [illegible] sweeping and almost unqualified [illegible] even if it had been true, which we utterly deny, Mr. Smith was the very last man in whom [illegible] grave. It is really too hard that not only should foreigners resident here be described by the hon. prosecutor Mr. Festone Smith, but that they should be [illegible] who has most disgraced them. We have sometimes written harsh words about life in Japan, written from us in the bitterness of a detested exile. But we will allow no one to use expressions like those Mr. Smith has used without telling him to his face that they are false.

We had previously written with equal or even greater severity on Mr. SMITH's appearance before the American Consular Court on a charge of non-registration, when he veiled his feelings in a burst of tears, after having stated that "not one in ten of the foreigners in this country had been murdered who deserved to be so." We had no wish further to take up these facts, but Mr. SMITH's champion has forced them from us. Of them, however, we have said enough to show that what we wrote three weeks ago was true, and that much more was written when Mr. SMITH's presence in the country enabled him to take any steps he pleased regarding it. The facts therefore speak for themselves as regards the charges brought against us. We have only further to add, in connection with this part of the subject, that far from having any personal ground of quarrel with Mr. SMITH, we have never to our knowledge seen him, and never had the smallest communication of any kind with him.

It is now necessary to say a few words respecting the letters of E. P. S.

In the first place, they are published under mere initials. In the next, the writer does not charge the Editor of the paper with the writing of the article, but speaks of it as an article *contributed* to the *Japan Weekly Mail*—a tortuous unmanly way of charging the Editor directly, with the intention of avoiding the penalty of libel. No one knew better than himself that this paper has never been prostituted to anonymous attacks upon anyone. Whenever unpleasant reflections have had to be made, it has been done by the Editor himself, and no one has ever seen in this journal an anonymous letter even attacking other journals. We have invariably excluded every such communication sent to us.

Regarding the second letter, offered as an apology, we feel less at liberty to speak, seeing that it was obtained by intermediaries who imagined, however erroneously, that it was accepted as such. To them we impute no blame. But we confidently appeal to every man of honourable instincts to decide whether a letter which disclaims all the imputations previously made, and which, by the insidious introduction of three words, neutralizes the very apology it pretends to give, is the outcome of an honest or manly mind. Either one of two things: a manly determination to abide by written words, at all consequences or hazards, or a manly retractation of, and expression of regret for having used them. This is to act as a gentleman.

We may fairly, however, say this much regarding the two letters taken together, that they are more scandalously disgraceful to the writer of them than anything which has ever been made public in this place. Never has private malignity taken so base and odious a form, never has the Press been so infamously prostituted, or the sense of the Public been so much outraged at this prostitution. And though, in virtue of a promise, we shall both publicly and privately hold the name of the writer inviolable, let him not think to escape from the consequences of his act. This is a small place, estimates are soon, easily and accurately formed of men's characters, and their hands are soon recognized if they habitually commit themselves to print. The witty man is known by his wit, the humorist by his humour, the man of judgment by the weight of his words, and the knave by his falsehood, treachery and variety of feigned initials. Of these the public takes a shrewd and fairly accurate account, and rarely fails to come to the right conclusion at last. As friend after friend, unsuspicious at first and afterwards betrayed, falls away from a man's social circle; after a succession of treacheries has left him standing alone, or approached only by those who may be his future victims; when his name has become coupled in every mouth with words which denote the lowest forms of baseness, he will soon read his fate in the eyes of others. Exclusion from all the haunts of honourable men, seathing criticisms in his presence on his anonymous and denied writings, the averted glance or cold recognition of unwilling acquaintances, will soon interpret to him the estimation in which he is held. And if the anger he has braved in this instance leaves him, by the merest accident, unprovoked by the exposure of his name, he has still the consciousness of guilt and shame clinging inseparably to him, and gnawing at the vitals of his dishonoured existence.

But, it will be asked, what is the remedy for this to the injured person? We reply, none but the verdict of public opinion, to which in all confidence we appeal. So long as cases such as arise out of occurrences of this nature are taken into court, and dealt with by common and not by special juries, so long will the law fail to afford redress for such injuries. It is wholly impossible to get men whose conversation is habitually loaded with expletives or adjectives unknown to the more regulated language of even every-day writing, to judge of reflections upon character containing such words. They may mean little or nothing by them, and imagine that any irritation caused by them is simple sentimentalism. But it is not thus that men of another class judge, and they are perfectly right to refuse to submit their characters to any such arbitrament. Severe criticism on the conduct of public men is one thing; imputation upon character is quite another. In old days men would have answered for such letters with their lives, but the law and public opinion now forbid resort to such means of arbitrament, and are the ultimate courts of appeal. If one cannot afford redress, the other can. In the case of a deadly injury or insult, Englishmen are neither satisfied with a scratch made by the rapier nor permitted so to avenge it.

But the change of opinion society has undergone in this respect has brought with it the greater obligations in the duties of the Press. A man who writes, or a journal which admits, such a letter as the first of those signed E. P. S., should rightly meet with death, social death in the one case, extinction in the other. The first may possibly be escaped by concealment, the latter, if unawarded, exposes every man to the attacks of masked ruffians.

It is our purpose to brand the letters of E. S. P. with an indelible stamp. So long as the present generation of foreigners bears these initials in mind—nor is it our fault if they are, as we suspected, Mr. SMITH's—so long shall they be associated with an act of singular infamy. They shall be like the mark of Cain, ineffaceable, burning, quenchless. And though perhaps, concealed from other men and unknown to the next generation, he on whose forehead conscience will set them this morning, shall see them to his dying day, nor shall time efface them. It shall not be for nothing that he has used the words which appeared under these initials,

Denn alles Schuld rächt sich auf Erden.

And if it avenges itself thus, it is because right is eternally right and wrong is eternally wrong. The writing of malignant anonymous libels may give pleasure to a certain order of minds,

> But the gods are just, and of our pleasant vices
> Make instruments to scourge us.

SPIRIT OF THE JAPANESE PRESS.

The Commutation of Pensions Measure.

("Chōya Shimbun," 17th December.)

As an end had been put to the Kumamoto and Yamaguchi troubles, the leaders of which had been executed, it was hoped that the nation would be freed from all anxieties arising from similar sources. But this hope was vain, for we find farmers of the Ibaraki *ken* in arms opposing the authority of the local officials. But supposing this affair happily over, can we be free from all anxiety? Were any man, watching the condition of this country with keen eyes, to answer this question in the affirmative, we could not praise his foresight. When a skilful sailor spies a small patch of dark cloud, he regards it as the harbinger of a storm, and makes the necessary preparations for meeting it, and men who begin to make their preparations after the storm has overtaken them, cannot be regarded as prudent or skilful. Now the Ibaraki affair is nothing more than the meeting of a number of farmers having for their main object the bringing of a complaint before the *Kencho*, and if discretion be used, it may all be settled without another shot being fired. There is therefore no occasion for us to be in any anxiety about this affair.

Yet we think there is a dark cloud visible in the south-eastern extremity of the empire, and we will say what we know of it, so that all who are in the same vessel with us may be prepared to meet the storm.

Sanjō Saneyoshi, the Prime Minister, issued the following notification on the 11th instant: -

"Hereditary incomes or service pensions which, since the time of the constitution of the *Han* have been permitted to be sold and purchased, shall, irrespective of their amount, be exchanged by the Government for bonds for ten years' purchase of the amount of such incomes or pensions."

What effect will this have upon the country?

We have heard from time to time that continuous trouble has existed in the island of Kiusiu on the subject of these pensions. During the existence of the *han*, the pensions of the *samurai* of this island were derived from, and represented by, land, which they were permitted to sell as they chose. When the *han* were abolished and the *ken* instituted, the Government took possession of these lands and gave the *samurai* in exchange the rice annually produced from them. But the title deeds remained in the hands of the *samurai*, and they now contend that there is no reason why these incomes should be limited to a given number of years. The officials of the *ken* appealed to the Council of State, and requested the Government to treat their people with special leniency in this matter and permit them to hold their pensions *in perpetuo*. Judging from the above notification it would appear that the Government has found it impossible to comply with the requests of this section of the community, and herein lies great danger.

We understand that the younger men of the *ken* are purchasing fire-arms and sharpening their swords, and the students of the "private school," known as such to the public, are greatly increasing in numbers.

What can be the meaning of all this? Do they desire to have a repetition of the troubles at Kumamoto and Hagi? Or do they first wish to show the power they possess, and then force the Government by menaces into compliance with their demands?

Now that the Kumamoto and Hagi affairs have been settled, and the only existing trouble is the unimportant one among the farmers of the Ibaraki *ken*, people are disposed to relax their vigilance, and we have written the above as a precaution, though we most ardently hope that nothing of the kind will arise. Yet it should be borne in mind that nothing is more dangerous than to be off guard even in days of perfect apparent tranquillity. How much more is it so when a dark cloud is visible! We think therefore we are fully justified in writing as we have done.

The Land tax Riots.

("Chōya Shimbun," 16th December.)

No sooner was an end put to the troubles in the south, than the farmers have begun to rise in the north-east. Why have we been so much tormented of late with these troubles when we ought to be enjoying rest and tranquillity?

On the receipt of the report that the farmers of the Ibaragi *ken* had arisen against the local authorities, we published an account of the occurrence in this journal, and have endeavoured to keep the public accurately informed upon the matter. We expect therefore that our readers are acquainted with the particulars of it.

The assembly of men in large bodies, attacking and killing the Government officials, is regarded by the law as one of the greatest of crimes. It not alone disturbs the Government, but affects the welfare of the people generally, and thus is prejudicial to the interests of the whole nation. It is therefore the duty of the Government to punish men who do these things in order that there may be no repetition of them.

This being the duty of the Government we do not intend to argue that these rioters should escape punishment. But there are two ways of doing this obnoxious duty, one with clemency, the other with severity. For the causes which induce men to rise against a Government are many—one cause alone will not do this. Detestable as the act may be, the motive may not be so; while sometimes, on the contrary, acts of but slight importance in themselves have their origin in odious motives.

Now are these farmers who killed policemen, wounded officials and opposed the Imperial forces, to be regarded in the same light as the Kumamoto insurgents who attacked the garrison, or the Choshiu insurgents who fought the Imperial troops at Hagi? None would say so. Every one will answer that they are not to be thus regarded.

Both the Kumamoto insurgents and the adherents of Mayebara took up arms against the Government: yet their contentions were void of reason. They were opposed to the reforms made by the Government, they insisted that the officials were corrupt and should be exterminated, and, if this could not be done, they prayed that the same miraculous tempest which destroyed the Mongolian invasion should again blow and destroy all the foreign vessels on the coasts. The public knows the fate which befell these men. But the disturbance at Ibaraki had altogether a different origin. The object of the rioters was simply as follows:—

Since the reform of the land-tax, they have been compelled to pay their taxes in money, and when the time for the payment of the semi-annual tax arrived, rice was very low. Thus they would be forced to part with more rice than formerly in order to raise sufficient money to pay the tax. They cried that of so much of their rice was taken from them they would be in danger of starvation, and assembled in the district of Makabe to discuss the subject, probably to ask for a reduction of their taxes, or to devise some method whereby their impending misery could be staved off. When the police approached and tried to disperse them, some of the more reckless among the farmers behaved in the manner stated in our previous issues, and the present trouble arose out of these acts.

They ought, of course, to have petitioned the *Kencho*, and their resort to violence was very wrong. But if we reflect on the cause of their acts, we find it to be a matter for sincere lamentation.

Our Government has of late been working hard to reform the land-tax, to have it paid in money instead of in kind, and so to adjust it that the tax should be the same independently of the outturn of the harvest. And as in this it has followed the mode of taxation common among the western nations, it has undoubtedly done well. But if we compare the circumstances of the farmers of Europe and America with those of Japan we find that they differ widely. Our farmers are very industrious and work all the year round, yet under ordinary circumstances they can do little more than gain bare livelihood and pay the taxes due from them. This being the case, if the price of rice falls much, or there is a bad harvest, they can barely keep themselves from starvation. We therefore think that due consideration should be given to these circumstances.

Whether the farmers in the Ibaragi *ken* are as badly off as they allege themselves to be, is a matter upon which we cannot speak with certainty. Yet it is obvious that they must not be regarded in the same light as the Kumamoto insurgents. We trust that leniency will be extended towards them, and that the district officials will take care that there is no repetition of these troubles. What has occurred cannot be helped, but the future is important, hence it is that we have written thus.

There are some solitary creatures who seem to have left the rest of mankind only to meet the devil in private.—*T. Adams.*

FOXIANA, OR THE QUID PRO QUO.

A ROMANCE IN TEN CHAPTERS.

By T. A. P.

CHAP. I.

IN the good old days long, long ago, when men ate and drank more and thought less; when every cupboard in every country house was the habitation of a goblin, and every gentleman of any consequence was attended by, at the very least, a ghost or two; when the sly badger spent his time after sundown in playing the devil's tattoo upon his hollow stomach, for the whole and sole purpose of twanging on the tight strung nerves of such timid spirits as quaked with fear if a cat so much as mewed or a night owl screeched in the dark; and when old gentlemen, supposed to be abroad "on business," accounted in the morning to their scolding wives for having incontinently slumbered in a ditch, by circumstantial tales of foxcraft—upon an autumn evening of such a fine old time, I say, a certain Hatamoto might have been seen strolling by himself upon the mountain side in the vicinity of his dwelling.

A trifling circumstance this to be at the trouble of recounting, it might possibly appear. "A mere nothing," Sir, did you say? "Absolutely nothing," methinks I hear you indignantly repeat, with an impatient toss of your head and, perhaps, something approaching to a stamp of your foot. Very well, Sir! I won't dispute the point. Nay, I'll cheerfully accept your view, inasmuch as it affords me an opportunity of proving to demonstration the falsity of that worn out old axiom, that *ex nihilo nihil fit.* What do you think of that, Sir? You *know* that "out of nothing something never comes." Of course you do. And yet the Hatamoto's stroll, you continue to maintain, was nothing, oblivious of the fact that a very great deal came of it. You "can't conceive it?" Very well, my good Sir! Has not one of our greatest logicians written, 'Ability or inability to conceive is in no case to be received as a criterion of axiomatic truth.'?

CHAP. II.

Well! thank goodness, that point's settled, folded up, docketted and pigeon-holed, and I am now at liberty to get on with my second chapter, which, by the way, only for your unseasonable interruption, crotchetty good Sir, I should have pretty nigh finished by this. To have an obstacle placed before one at the very outset of his story is most embarrassing. It's like the boulder, which falling from the mountain side athwart a little brook, diverts it from its course or dams its outflow for a space, until the water, heaping up behind it, at last gains force enough to roll it out of way and resume its course. Is the metaphor correct? It is. By the way, I was diverted. Your pardon, Sir! the double meaning's obvious. Well! well! let me see where was I when your boulder fell. Oh! aye! strolling with the—but that's best told at the beginning, not the tailend of a chapter.

CHAP. III.

At this rate we shall never make any progress. We have not advanced a single step yet, I declare. And there's so much ground to be got over, too! Well! a truce to metaphors, let us make a beginning.

A certain Hatamoto—we suppress his name for reasons which will be obvious in the sequel—or stay, I don't mind taking you into confidence on the understanding that you'll cease to interrupt me for the future. But on second thoughts I'd better not, perhaps.

A certain Hatamoto, strolling along a mountain path on an autumnal evening, stumbled across a couple of hunters, busy taking aim at an object on the hillside opposite. Following the direction of their fusils, he saw that they were intent upon the destruction of a fat old fox who was slumbering in fancied security, with her head and shoulders well outside her hole, the better to enjoy the evening breeze, no doubt,—the weather was still sultry—and therefore completely at the mercy of her enemies.

Now, the Hatamoto being a sportsman himself, and having withal a character for humanity—in proof of which, it used to be confidently asserted, aye, and almost believed too, what's more, that he had not tried the temper of his sword on more than half a score of old women and blind men, if so many—was so moved by compassion towards the slumbering fox that he felt himself impelled to intercede in her behalf. "Why shoot an old fox like that?" he said, "it can be of no use to you, I am sure". "On the contrary," replied the hunters, simultaneously lowering their pieces until their crooked handles rested on the ground beside them. "On the contrary, we can get a silver *bu* for the skin, so it's well worth a pinch of powder and a trifle of shot." This they said with quite an air of disappointment for they had nearly succeeded in taking a correct aim when they were interrupted, and felt confident that in another five or ten minutes they would have been sure of their mark. "Ah! indeed," said the good-natured nobbe, compassionating their disappointment. "Then if I give you the *bu*, will you let the fox off?" To this they joyfully assented, the more readily, perhaps, because they were but indifferent shots, and rude experience had taught them that a bird in the hand is worth ever so many in the bush. So they pocketed the coin and shouldered their arms and decamped at "double quick," whilst our Hatamoto strolled homewards with a smile upon his benevolent old face, and that happy feeling of self appreciation in his bosom which the knowledge of having performed a good and disinterested action is apt to engender in the human heart.

CHAP. IV.

A couple of months had passed since the events just recorded had taken place. The leaves had turned to brown and fallen from the trees, and the noses of everybody had turned red and required to be wrapped up in comforters to keep them warm.

An icy wind from the north rushed down the mountain side and rattled the Hatamoto's wooden shutters and paper windows in a most inconsiderate sort of way, and finding that it was refused admission, dashed round the corner and took itself off with a howl, carrying with it for very spite, as fast as it was generated, every ray of warmth which his charcoal fire emitted.

Perhaps it was on this account that we find him taking such very particular pains—on the night when next we encounter him—to tuck his padded quilt in between his shoulders and the mattress, and to pull his wooden pillow so well beneath it that nothing but the little queue upon the top of his head at last appeared above the bed clothes.

Now a wooden pillow is a difficult matter to manage. It requires no small amount of practice to adjust it to a nicety, so that neither is the neck bruised or rendered uncomfortable by it, nor on the other hand is a corner left sticking out, forming thereby a funnel for the cold outside air to rush into, as into a whirlpool, and flow down and chill the shivering sleeper. Our good friend the Hatamoto was well aware of this, and had only after a deal of twisting and turning succeeded to his satisfaction, when he thought he heard a sigh. He wasn't sure, however, and declined to disturb himself without sufficient reason, so he lay still and listened. There was no mistake about it this time, the sigh was repeated.

"Hallo!" said the Hatamoto, uncovering an ear to make certain he was not deceived, and disclosing thereby the top of his head, which looked for all the world just then like a blue buoy amidst billows of bedclothes. "Hallo! what's that?"

"Only I," replied a silvery voice.

"The devil," said the Hatamoto, sitting bolt upright, and thereby undoing in a second the tuck of his padded quilt, and completely upseting the wooden pillow which he had so much trouble to place in position. "And who may you be?" he faltered out with considerable dismay in his voice at the impropriety, when he discovered that his visitor was neither more nor less than a lovely young woman.

"Your humble servant," said the fair unknown, making him a profound obeisance.

"But," said the Hatamoto,—.

"What?" said the lady.

"Think of the—the—the—"

"Don't be uneasy," said the lady, "I am invisible to all but you, and therefore you can't be compromised. Besides I'm only a fox."

"A what?" said the Hatamoto, the little queue upon the top of his head standing up at an angle of forty-five degrees.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"A fox," replied she, giving a delicate little bark-like cough behind her hand just to convince him.

"Oh indeed," said he, "will you be so very kind then as to tell me to what I am indebted for this visit." He was beginning to shiver with the cold.

"You saved my life, and I have come to thank you for your kindness."

"Pray don't mention it, I beseech you," replied he, with an ill-concealed yawn, and falling to at his padded quilt and wooden pillow as before. "I have forgotten the circumstances."

She thereupon recalled to his memory how he had bought her life with a silver *bu*, and concluded a rather long-winded story by declaring that a truth as patent as that "one good turn deserves another" was so fully understood even by foxes, that she had come for the express purpose of rewarding him for his humanity.

But it did not seem by any means an easy matter to discover in what form this reward could be most suitably and agreeably bestowed.

She proposed money, but her benefactor scouted the idea at once, as he was in very comfortable circumstances.

She suggested an addition to his lands, but he declared that he had already as much as he could manage.

She hinted to him of a lovely wife, but the haste with which he declined, and the evident fright the very idea threw him into, convinced her that he was not only married already, but was henpecked into the bargain. With great presence of mind she therefore at this juncture pretended to cough again, under cover of which he had time to regain his usual serenity. But, when with some hesitation she enquired if he had a family, and was answered in the affirmative, she declared herself quite nonplussed, and at a loss to know what to suggest.

Chap. V.

In the last chapter we left Mistress Fox in a quandary, and the very least we can do for a lady in distress is to get her out of it in this way.

"I never knew such a man," said she in an injured tone. "How *am* I to lighten the obligation you have imposed upon me? Can't you suggest something? What would you like to have done for you?"

"Nothing at all," said he, beginning to snore, for it was past his bed hour and he was tired of the interview.

"That'll never do," said she.

"Caw h—m," said he, snoring so loudly that he quite drowned her voice.

"I cannot go until I've hit upon something," said she at the top of her voice, and beginning to cry.

"Dear, dear, what's the matter with the child?" said he, kicking off the bed clothes, and so disturbed—the kind soul—at her distress, that he blew his nose violently and declared that the lamplight made his eyes to water. "This will never do. I'm afraid I have been rude."

"Not at all," she replied, pouting and playing with her handkerchief, whereupon they both fell to bowing their heads upon the ground so pertinaciously that they seemed as if they never would leave off, and looked all the time like nothing so much as a pair of overgrown poppies blown about by the wind.

"Please tell me what you would like me to do for you," she pleaded, when they had both finished their parlour gymnastics. "Do try and think of some way in which I can serve you, as I have failed to find out myself."

"Well," said he, stroking his chin contemplatively, and willing to please her, "I have had for ever so long an inordinate longing to be Tycoon, if only for the space of three days. Just to try how I should like it, you know."

"Wh – – e – – w – w," said she, screwing up her pretty little mouth with as near an approach to a whistle as it was fashionable in those days for a young lady to indulge in. "Wh – – e – – w – w, I'm afraid it can't be done."

"Must though, nothing else will satisfy me."

"Give me three days to think it over."

"Thirty if you like," chuckled he, glad at the prospect of having got rid of her at last.

"I'll be sure to come when the time is up."

"On the word of a lady?"

"On the word of a fox."

Chap. VI

So our Hatamoto, arranging for the sixth and last time his padded quilt and wooden pillow, fell fast asleep. Fell fast asleep and dreamed of foxes and pretty women, Tycoons and glory, and who knows what, until he woke with a start, and a head in such a whirl, that he could not, for the life of him, remember distinctly anything which had happened over night, and before the three days were out had forgotten all about it.

Not so Mistress Fox, however, for at the appointed time there she was sure enough, just as beautiful as ever, but a trifle sadder in manner, perhaps, as if she had something on her mind.

"I have thought well over your wish" she commenced, "and consulted with my friends, and regret to say that it cannot be accomplished."

"Then there's nothing more to said about it," replied he somewhat pevishly, as if anxious to finish the business out of hand, for he had been unsuccessful with his plaguy pillow this time and had contracted a crick in the neck in consequence. "Then there's nothing more to said about it, and I wish you a very good night, and regret that you have gone to so much trouble on my account." Saying which he fixed the wooden pillow with quite a determined air behind his right ear, and was upon the point of diving beneath the sea of bedclothes, when she, seeing that now or never she must gain her point or give it up altogether, gave vent to a little scream which brought him once more to the surface with a bob, and gave her an opportunity of addressing him with a prospect of being heard.

"How very impatient you are," she complained, "if you will only listen for five minutes I'll tell you of a plan which I have hit upon which may perhaps meet with your approbation, and if it doesn't, why, there's no harm done."

So she told him in as few words as she could, how that although it was impossible that *he* could hope to be Tycoon for even half an hour, yet if he so desired it, she would undertake that his grandson should be appointed to that high office. But in order to bring this about, he would have to be prepared, she said, for the following events:—

The death of his wife and all his family save one.
His own bankruptcy and ruin, and
His execution as a felon, before the fulfilment of his wish.

Notwithstanding the terrific nature of these conditions, strange to say, he readily consented, either because he was half asleep, perhaps, and did not hear them correctly, or because, unlike his cotemporaries, he was not of a superstitious turn of mind, and treated the whole affair as an uncomfortable dream, the natural result of an excess of—shrimps.

Chap. VII.

Time rolled on, and our Hatamoto's hair began to betoken that he had reached the October of his life, when, in the midst of great prosperity and happiness, a strange and deadly pestilence appeared amongst his neighbours. He had hardly time to assure himself of its presence out of doors, when it had crossed his own threshold and laid prostrate around him his wife and children.

One only escaped,—a daughter who gave promise of exceeding beauty.

At this juncture, too, it came to pass to that a levy of money exacted by the Government to prosecute an invasion of Corea, found him so undone by grief at his bereavements, that he entrusted the negotiation, by which his house and lands were pledged to raise the sum required, to the hands of an unjust steward, who stole his title deeds, and, pawning them for half their value, fled no one knew whither.

Thus in the space of a few short years had two of the conditions proposed to him by Mistress Fox been accomplished, and it only remained to fulfil the third and last for his side of the contract to be completely carried out.

Chap. VIII.

Deprived of house and home by such a complication of misfortunes, our poor friend the Hatamoto was driven to eke out the remnant of his miserable existence by playing the *gedaigu* at a country theatre. Here, as luck would have it, a farmer who had been a tenant of his in the days

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

of his prosperity, recognising, perhaps, in the melancholy ditty the voice of his

[illegible]

discovered him, and [illegible] plight, the honest fellow [illegible] asylum at his home, [illegible] ing years he would [illegible]

It was something [illegible] quiet retreat with his friend.

Here he had plenty of time to [illegible] life, and the strange mercy [illegible] the fox appeared resolving to [illegible] admit to himself that what [illegible] remarkably with what had [illegible]

Notwithstanding all this, however, [illegible] he had now seen the very [illegible] could possibly be more [illegible] could be perished to [illegible] quiet and innocent existence. But, alas! how [illegible] in finding out his mistake, for [illegible] gun upon his shoulder to look [illegible] his time in sporting [illegible] sacred crane by mistake, [illegible] he came to wit to [illegible] was a snowy day, and [illegible] might as well take it home [illegible] eating—he slung it across his shoulder, [illegible] reeds, and set out for his home.

He had not proceeded [illegible] who had watched his [illegible] stealthily followed him [illegible] laying hold of him, dragged [illegible] evidences of his guilt upon him. [illegible] the slaughter of a sacred [illegible] fellow was forthwith erected, and [illegible] for informing on him, as was by law enacted.

CHAP. IX.

"What a grand thing it would be to be a fish," like this housekeeper of the Sumida, and to [illegible] swept away before your [illegible] that no vulgar suppliant may [illegible] prayers as they ascend to the [illegible] Gods." So thought a young girl, who, though not only was very lovely, and who, last of all the crowd of worshippers who had been cleared out of the great temple of Asakusa in Yedo, yet lingered on the steps in open-mouthed admiration of an elderly lady, to whom the ascent was no small difficulty, to judge from the asthmatic wheezings which accompanied her progress.

"Make way, all ye common herd, for Her Pomposity," shouted an attendant who marched in front. "What are you gaping at, you hussy? Don't you see Her Pomposity coming?" said a Fussy Old Gentleman who darted away from amongst the great lady's attendants, and seizing the wondering girl, shoved her this way and that, and finally pulled her so many ways at once that she became fairly bewildered, and would inevitably have fallen down the steps only the F. O. G. caught her in time.

This scramble having attracted Her Pomposity's notice, she was observed to start and turn pale when her eye fell upon the features of the girl, and then, turning to an attendant, to whisper something in his ear. Thereupon another Fussy Old Gentleman might have been seen darting over to F. O. G. No. 1 and whispering something into his ear. The upshot of all which was that F. O. Gs No. 1 and 2 seized each a sleeve of the young girl's garment, and marched her into the temple in rear of Her Pomposity.

The cause of these unusual proceedings turned out to be that Her Pomposity fancied she had discovered in the young girl a remarkable resemblance to the consort of the Tycoon, who had lately died, and to it her lord and master so disconsolate for her loss that he refused to eat, drink or be comforted, and hadn't even the heart to order a single execution since his bereavement.

A careful inspection after prayers having confirmed H. P.'s first impressions, she took the young girl home with her, and having dressed her out in the garments of her deceased mistress, introduced her to her Master, who, pleased with the resemblance which she bore to his [illegible] love, married her forthwith, and in process of time she became the father of a fine boy, who ultimately succeeded him, when he died, in his high office and emoluments.

CHAP. X.

Now this young girl who, after the ruin of the Hatamoto, became a [illegible] in Yedo, was his DAUGHTER, and her son, afterwards Tycoon, was his GRANDSON.

In such wise was his destiny fulfilled.

PILOTAGE REGULATIONS.

NOTIFICATION NO. 154 OF DAIJŌKWAN.

(Translation.)

The following PILOTAGE REGULATIONS for Vessels of Foreign form of construction, are hereby declared and established.

(Signed) SANJŌ SANEYOSHI,
Daijō Daijin.

1st day, 12th month,
9th year of Meiji.

[illegible] to be [illegible]

SECTION 1.—On and after the 15th day of the [illegible] of the 10th year of Meiji, every person [illegible] as a Pilot, and every boat used as a pilot boat, within the undermentioned ports or districts, shall be provided with a license, issued in accordance with these regulations.

[illegible] Pilotage matters [illegible] under the jurisdiction of the Home Department, who shall appoint competent persons to examine all applicants, in accordance with these regulations.

[illegible] Licenses shall be granted to Pilots for the following Ports or districts and others as circumstances require, that is to say:—

1st.—For the Gulf of Yedo.
2nd.—For the Isumi Nada.
3rd.—For the Isumi Nada through the Inland Sea to Nagasaki.

Number of Pilots to be licensed.

SECTION 4. The number of Licensed Pilots for the several ports or districts shall be in accordance with the requirements of the various ports or districts.

Applications for licenses; how to be made.

SECTION 5. All applicants for a Pilot's License must forward their testimonials to the Home Department through the local Government of the district within which they may reside for to the Board of Examiners, if such Board be at the time sitting within the district) authentic and satisfactory testimonials as to service and character, especially mentioning sobriety, will be required from all applicants, without which no person shall be licensed.

Qualifications necessary to obtain a Pilot's license.

SECTION 6. A candidate for a Pilot's License must be twenty two years of age, and have been at least one year as Master or First Mate of a square rigged vessel of foreign form of construction, and over 100 tons register, and six months in the pilot service within the district for which he wishes to obtain a license; or, he must have piloted vessels of foreign form of construction for a period of two years prior to the 1st day of the 1st month of the 10th year of Meiji, and within the district for which he wishes to obtain a license; or he must have been six years at sea, one of which has been as an apprentice to the pilot service, within the district for which he wishes to obtain a license; he shall be required to satisfy the Board of Examiners that he is thoroughly acquainted with all the bays, harbours, channels and anchorages, also with the dangers and leading marks or bearings for clearing the same, and with the tides, currents, lights, buoys, and beacons within the district; also that he is competent to handle and work a vessel of the largest class.

Granting of licenses.

SECTION 7.—Whenever an applicant has duly complied with the requisite conditions, the same shall be reported to the Home Department, and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

a license shall at once be granted to him; which license shall specify the port or district within which he is authorised to pilot, also his name, place and date of birth, and date of issue, and every license, so granted, shall be null and void after the 1st day of the 1st month of the following year.

Annual renewal of licenses.

Section 8.—Every Pilot being desirous of having his license renewed, shall, on and before the 1st day of the 1st month in each year, make a written application for the same to the Home Department, and such license shall be renewed or not, as the Home Department shall see fit.

Fees to be paid for a license.

Section 9.—Every Pilot shall pay a fee of ten *yen* for his original license, and of five *yen* for each annual renewal of the same.

Public notice to be given.

Section 10.—Public notice shall be given in two local newspapers, one Japanese and one foreign, at least fourteen days prior to granting any license, and every such notice shall state the number of Pilots to be admitted, and the time and place at which the examinations shall be held.

Order in which applicants are to be chosen.

Section 11.—The names of all applicants for a Pilot's license, whose testimonials as to service and character are found satisfactory, shall be registered in the order of application, and the candidates shall be chosen in regular succession, commencing with the first registered applicant and so on until all the vacancies are filled up.

Special overland permits.

Section 12.—Pilots, being other than Japanese subjects, licensed in accordance with these Regulations, shall, (for all pilotage purposes) be accorded special permission to land on any part of the sea-coast, within His Imperial Majesty's Empire, and to travel overland to the port for which they are licensed.

All pilot boats and vessels to be licensed.

Section 13.—The Home Department shall, on the application of one or more duly qualified pilots, grant a license to any vessel or boat that is to be employed exclusively for pilotage purposes, and by licensed pilots; and every such license so granted shall be for one year only, subject to annual renewal in the same manner as a Pilot's license.

Licensed pilot vessels to be exempt from all dues.

Section 14.—Every licensed pilot boat or vessel, shall, for all pilotage purposes, be allowed to move freely within the district for which she is licensed, and shall be exempt from all harbour, tonnage and light dues whatsoever.

Characteristics of pilot boats.

Section 15.—Every pilot vessel and boat shall be distinguished by the following characteristics, that is to say:—

1*st*.—She shall be of a black color outside, with the exception of such names and numbers as hereafter mentioned.

2*nd*.—The words "Licensed Pilot Boat" in Japanese and Roman characters, or in Roman only, shall, with her number, be legibly painted at the stern, or on her quarter, and on the head of the mainsail.

3*rd*.—When any licensed Pilot is on board any licensed pilot boat or vessel, a flag at the masthead, or sprit, or staff, or in some other equally conspicuous position, shall from sunrise to sunset be kept flying, and such flag shall be in accordance with the regulations of the Navy Department, and of larger size than usual, compared with the size of the vessel or boat.

4*th*.—At night, every pilot vessel or boat when under weigh, and on, or proceeding to or from her station, with any duly qualified Pilot on board, shall from sunset to sunrise exhibit a bright white light at her masthead, visible all round the horizon, and shall in addition, burn a flare-up every fifteen minutes; at all other times she shall carry the usual side lights as provided for sailing vessels.

Day and night signals.

Section 16.—The following shall be deemed to be the signals for a Pilot; viz., in the daytime:—

1*st*.—The jack, or other national color of the ship hoisted at the fore.

2*nd*.—The international code pilot signal P.I.

At night the following signals when used together or separately shall be deemed to be signals for a pilot.

1*st*.—A blue light every 15 minutes, or

2*nd*.—A bright white light flashed or shewn at short intervals just above the bulwarks for about a minute at a time.

Pilot to produce copies of these regulations and his license to every person employing him.

Section 17.—Every qualified Pilot, whilst acting in that capacity, shall be provided with a printed copy of these regulations, as well as his license, and shall produce them to every person by whom he is employed, and if he refuses to do so at the request of such persons, he shall be subject to suspension or dismissal from the pilot service.

Power of the Home Department to cancel a pilot license.

Section 18. If the Home Department has reason to believe that any licensed Pilot is, from incompetency, unfit to perform his duties, or has been guilty of drunkenness, misconduct, gross carelessness, refusal or neglect of duty, the Department may cause an investigation to be instituted, and on satisfactory proof of the offence, may cancel or suspend the license of any Pilot, as the justice of the case may require.

Pilot licenses not transferable.

Section 19. A Pilot's license shall not be used by any other than the person to whom it is granted. The license of any Pilot who disregards this regulation shall be cancelled forthwith.

ANNUAL GENERAL MEETING OF THE ATHLETIC ASSOCIATION.

This meeting took place yesterday evening at the Grand Hotel, the following members being present: Messrs. A. H. Dare, Kilby, Walker, Pinn, Mitchell, Brooke, Dodds, Watson, Smith, Hutchison, Reid, Jeyes, J. J. Dare, Scott, and Henley.

Mr. Dodds was voted into the chair. He stated that the meeting had been called, in accordance with the rules, to hear the reports of the Secretary and Treasurer, and for other general business.

The minutes of the last meeting having been read and confirmed, the Chairman put before the members the following accounts for the current year:—

THE AMATEUR ATHLETIC ASSOCIATION OF YOKOHAMA IN ACCOUNT CURRENT WITH THE HONORARY TREASURER.

1876. *Dr.*

To Balance from 1875			$ 21.41
„ Prizes given by the Association Spring Meeting	$267.10

„ Balance carried down					$ 19.
				Mex. $	675.

E. & O. E.

F. WALKER.
Honorary Secretary and Treasurer.

Yokohama, December 21st, 1876.

The Chairman congratulated the members upon the flourishing condition of their exchequer, remarking, that

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

though they were still in debt, yet it was for so less than last year. The subscriptions, however, became due next month, so that the Club would be in funds almost immediately.

The following account of the doings of the club during the past year was now submitted [illegible]:—

[illegible]

Mr. Walker [illegible]

Mr. Watson moved that the report be passed, which Mr. Reid seconded, and the motion was carried unanimously.

It was notified that all the retiring committee, with the exception of Mr. Walker, offered themselves for re-election.

Mr. J. J. Dare said that before going further it was the duty of the members to return a vote of thanks to the retiring committee. Mr. Watson seconded the motion, and it was passed *nem. con.*

After being put to the ballot it was found that Mr. C. P. Hall had been elected in the place of Mr. Walker, so that the committee for next year consists of Messrs. Hamilton, Kilby, Dodds, Hall and A. H. Dare.

Some slight alterations in the Rules of the Club were next proposed and adopted.

Mr. Walker then moved that it be left to the committee to decide whether it would be desirous to hold two meetings in one year, as the Autumn ones usually so poorly attended.

Mr. Kilby and others opposed this proposition, saying that unless excitement were sustained the Club would soon drop out of existence. It was further shown that the Autumn meeting fully paid for itself.

Mr. Watson proposed that there should be several champion cups to be run for at three succeedings meetings, and remarked that by reason of the handicapping the really most efficient competitors came in second best in most events. After some discussion this point was finally settled by Mr. Julius Dare promising to present a cup on the terms proposed.

Some discussion then ensued with regard to sending invitations to the Kobe, Nagasaki, Shanghai and Hongkong athletes to visit and take part in the spring meeting. This proposition being adopted, after a vote of thanks to the Chairman the meeting dispersed.

We are informed that three Spanish war vessels are expected here shortly; for the purpose, it is said, of demanding satisfaction for outrages committed by the Chinese in Formosa eleven years ago, in connection with the loss of the *Rover* on that coast. It is said that the Chinese government have delayed making compensation up to this date. It is hinted to us, however, that the meditated visit of these war vessels has even more to do with the Cuba Coolie trade.—*Shanghai Courier.*

YOKOHAMA RACE CLUB.

The annual meeting of the Club was held at the Chamber of Commerce Rooms (kindly lent for the occasion) yesterday afternoon present:—Messrs. Bennett, Braun, Brewer, Buckle, Center, Cope, Cruickshank, D'Hanger, Dodds, Dunlop, Evers, Fitz Henry, J. A. Fraser, Francke, Glennie, Haswell, Hay, Heimann, Johnstone, Keswick, Kirkwood, Middleton, A. Mitchell, Mollison, Penn, O. Reimers, Strachan, Vouillemont, J. Walker, A. Winstanley and Wolfe.

Mr. J. A. Fraser was elected into the chair, and briefly explained that the object of the meeting was to receive and pass the Treasurer's accounts for the past year, and to elect a committee in place of the retiring one. No important motions would be brought before the members on this occasion as no notice of such had in accordance with the rules, been given, but it was yet open for members to make suggestions, and if any member had any to make he had no doubt they would be welcomed by the meeting.

The minutes of last meeting were taken as read, and the Honorary Secretary then proceeded to read the Treasurer's statement, as follows:—

Abridged Account of Receipts and Expenditure for 1876.

Receipts.	*Total.*
Yearly and Half-yearly Subscriptions	$1709.50
Entrance Fees	3235.00
Subscriptions to Cups	1755.38
Stands &c.	645.00
Refreshments	1054.50
Totalisator Stakes	538.50
Bets, Enclosure Room, and sundries	145.00
Yokohama Racing Association, proportion of Rent and Expenses	716.00
	9798.88
Balance in hand 1st January, 1876	2637.71
	12436.59

Payments.	*Total.*
Maintenance of Course, rent, wages, &c.	$1475.98
Prizes	5615.00
Expenses of Meeting	420.00
Printing and Advertising	254.50
Subscriptions	1500.00
Stands	335.89
Outstanding	75.00
	9676.37
Balance in hand 20th December, 1876	2760.22
	12436.59

W. M. STRACHAN,
Hon. Treas.

Yokohama, 20th December, 1876.

The Chairman congratulated the members on the extremely satisfactory state of their finances, which proved that the unfortunate schism which had occurred during the year had not done the Club any material harm, as was shown by the balance in hand being somewhat larger than it was at the close of the previous year.

Mr. Winstanley proposed and Mr. Center seconded that the accounts as presented be passed. Carried unanimously.

The Chairman then reminded the members that their next business was to elect a Committee for the ensuing year, and he felt sure that every member would fully recognize how much was due to the retiring Committee for the able way in which they had conducted the affairs of the Club.

Mr. Center said he would like, before the election was commenced, to propose a vote of thanks to the retiring Committee. Seconded by Mr. Fitz Henry and carried unanimously.

The election of a Committee was next proceeded with, the Chairman, in reply to a question by Mr. Dodds, stating that with the exception of Mr. Cruickshank, none of the retiring Committee offered themselves for re-election.

The ballot resulted in the election of the following gentlemen, all of whom, it was understood, were willing to serve:—Messrs. W. J. Cruickshank, C. Braun, A. Evers, E. B. Watson and F. E. Foster.

Mr. Braun expressed his thanks on behalf of himself and colleagues for the honour done them, and promised that they would do their utmost for the welfare of the club, but succeeding, as they did, such a strong and able Committee, he feared their shortcomings would be very apparent, but as they would

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

only have the prosperity of the Club at heart he begged for the kind indulgence of the members.

Mr. Center said he thought that there was a strong feeling among the members that the principal events for the Spring and Autumn Meetings should not be changed, and though, as the Chairman informed him, he could not put this in the form of a proposition, he threw it out to the new Committee as a suggestion which he thought would meet with the approval of the Club, especially as its adoption would allow the Committee to issue the programme earlier than usual, and so enable owners to know with certainty some time beforehand what races their ponies would have to run for.

The meeting then separated with a vote of thanks to the Chairman.

Law Report.

H. B. M.'S PROVINCIAL COURT.

Before H. S. Wilkinson, Esq., Acting Law Secretary.

Tuesday, December 21st, 1876.

James Donald and Charles Forsyth were charged by Thomas Baker, chief-officer on board the Mitsu Bi-shi steamer *Genrio Maru*, with having assaulted him and attempted to stab him with a knife.

The prosecutor appeared personally; the accused were defended by Mr Montague Kirkwood.

Thomas Baker, sworn, stated:—I am a British subject; am chief-officer of and live on board the *Genrio Maru*. I wish to accuse James Donald with striking me in the face two days ago. He came on board my ship. I still retain the mark of his fist. That is all I accuse him of.

His Honour here asked prosecutor to keep within bounds and tell the story of the events as they occurred, without rambling.

Prosecutor continued:—I wrote to Mr Donald to come on board to see me. He brought a loafer with him, this man Forysth, as I can prove.

His Honour:—Are you sober?

Prosecutor:—I think I am.

His Honour:—Is there any one present who knows you?

Prosecutor.—Oh! yes, every one knows me. Well, you see, he brought two more persons along with him, two loafers, and they all went for me. I sent for the police to give them in charge, but the sergeant would not do it—no, not he. Donald and Forsyth come on board to molest me

His Honour:—Who in Court is acquainted with you?

Prosecutor:—They all know me. (To the public) where's the man that says he does it know me? Where's the man, I say? (To his Honour) You see they all know me.

His Honour here requested witness to hold his tongue, and asked if any one in Court knew him.

Mr E. Bonneau stood up and said he was acquainted with prosecutor.

Mr Kirkwood stated that this witness knew prosecutor's character very well and could testify that he was an habitual drunkard.

Eugene Bonneau, sworn, stated:—I know the prosecutor and present witness. I have seen him often drunk. He is not a sober man. I do not think that he does know what he is about now very well. I can't say much about him, however. I don't think he can have a recollection of what occurred.

Sergeant Walter Loxton was now sworn and said:—I should think that witness is not in a fit state to give evidence now. I should think that he has been drinking for some time. I think he is still under the influence of drink; that is why he is so quiet.

His Honour to prosecutor:—Is there no one in Court who can speak to your sobriety?

Prosecutor:—I don't wish to speak to any one

Mr Kirkwood here said that under the circumstances he would now ask the Court to dismiss the charge. It was very evident that prosecutor had not complete command over himself. He was slightly muddled. For instance he had said this assault occured two days ago, while it was known to the Court that the summons had been taken out long before that.

His Honour said that he was of the same opinion. It only remained to be seen now whether prosecutor be ordered to pay costs or not before the charge be dismissed.

Mr Kirkwood said that if the prosecutor in an action appears in an unfit state before the Court to give evidence, it was just as if he had not appeared at all, and the case must be dismissed accordingly.

His Honour then said that the case would be adjourned till this morning. Prosecutor in the meanwhile to deposit in the Consulate $25 in payment of costs of the case so far.

J. D. Carroll & Co., *v.* R. T. Miller.

Plaintiffs claimed $20 damages done to goods conveyed from London in the ship *Peeress*, commanded by defendant.

Plaintiffs were represented by Mr F. C. Spooner; defendant appeared personally.

Mr Spooner said that he was an American citizen, and sued defendant for the amount of $20, being damage done to certain goods.

His Honour here asked if defendant admitted that the goods were damaged and that the amount claimed was the legitimate value of what was damaged.

Captain Miller said that he admitted that the tins of turpentine were damaged, and that he thought the amount claimed was the fair market value. His defence in the case was that he did not consider himself liable for damage done to cargo unless such had occurred through carelessness in the stowage. The Bill of Lading exempted the owners of a ship from claims for damage done through "leakage, breakage, or rust," &c., &c.

Mr Spooner, in answer to the Court, said that he had not brought the Bill of Lading. He thought the damage had occurred through the tins being stowed above one another and the edge of one cutting into the next and causing a leak. There were four drums of spirits of turpentine. In his opinion this leakage occurred through the goods not being properly stowed.

The captain maintained that this damage occurred through the ship meeting with bad weather, and offered to show that fact by reference to the log book.

His Honour said that the log book could not be taken as evidence. He understood that the ship was being detained on account of this dispute alone, and considered it therefore a fair case for compromise. To give both parties an opportunity of bringing this to pass, the Court was adjourned till 2 p.m.

Court re-assembled at 2 p.m.

Neither party appearing, His Honour ruled that the case be struck out.

Daniel Preston and Thomas Glen, seaman on board the British ship *Derana*, were charged, the former by John Peterson, the latter by George Johnson, with having assaulted them on Wednesday morning last on board that ship.

John Peterson, sworn, stated:—I am an A. B. on board the ship *Derana*. Yesterday morning I was called out of my bunk by Daniel Preston to fight. I declined to get out. Preston and some others dragged me out of the forecastle and he struck be senseless with a belaying pin. I have no idea what their reason for it was. The night before there had been a little squabble in the forecastle. I and another were in the row. I can't say what it was about. The other man was Johnson. This row had nothing to do with the row in the morning.

Cross-examined by prisoner:—I never had any row with you except on the first day we came on board. I wanted you to have it out during the voyage but you would not.

Frank Saunders, sworn:—All I know of this matter is that they pulled Peterson out of the forecastle and struck him. Preston took a belaying pin and knocked him on the head.

Prisoner had no questions to ask. He said he struck Peterson once. That was all.

George Johnson, sworn, stated. Yesterday morning Glen came on board and wanted me to fight. I would not, and he struck me with a bottle, and flung a boot at me. I am not sure that it was Glen who threw the boot.

Accused admitted leaving thrown the bottle, but it smashed on the board and a piece flew up and struck Johnson.

To witness: I took up the bottle because you illused that man.

William May, sworn: I am master of the ship *Derana*. When I came on deck I saw a man bleeding. Glen and Preston were standing together and I was told that Glen had gone on shore without leave and returned on board drunk. He threatened to kill everybody and was swearing considerably. The row was all over before breakfast time, and the men resumed duty at once.

To the Court: Glen's conduct till now has been irreproachable.

The accused to Court: I was not drunk. I only had one glass of liquor from the time I went on shore till I returned on board again. I have nothing to say for myself.

Captain May to Court: I leave in about three weeks time.

His Honour remarked that there had been something rankling in the minds of both when they returned on board in so disorderly a manner. They were both liable to several weeks

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

imprisonment for using belaying-pins bottles and such like weapons upon their companions, but as they had perhaps received some provocation he should sentenced each to seven day's imprisonment

Friday, December 22nd 1876.

THOMAS BAKER *v.* J. DONALD and C. FORSYTH.

(Adjourned from 21st instant.)

It was explained that the prosecutor had not paid into the registry the $5 asserted to have been paid by him by 3 p.m. the day before

Defendants appeared to their recognizances. Prosecutor did not appear.

The case was therefore dismissed and prosecutor ordered to pay $25 costs to each defendant.

E. BONNEAU *v.* T. BAKER.

This was a claim for $10 for goods sold and delivered, with interest.

Plaintiff appeared personally. Defendant did not appear, though the Court granted him an hour's grace.

Eugene Bonneau, sworn:—The goods in question are 50 bottles of claret. I told defendant I would let him have them for $1 a bottle per dozen, in all $7.50. I claim $4 interest for 11 months. On several occasion I asked him for the money, but he only answered that he would pay when he felt inclined. I did not give him a memorandum of the amount. I know he got the claret, for I delivered it to him myself. There was no agreement for interest. He was to pay me a few days after he received the wine.

Verdict in favour of plaintiff for $7.50 and $2.00 costs. The latter to be paid within 10 days.

IN THE JUDICIAL COURT OF KANAGAWA.

Before Mr. ASAINA KANSUI, Vice President.

Tuesday, December 19, 1876.

A. ZEMBSCH *v.* KANAMORI MATSUKICHI.

The Court assembled to-day to render the following judgment in this case

JUDGMENT

(Official Translation.)

The subject of plaintiff's claim according to his statement is that on the 1st of June last he bought through his clerk Ikeda Keisuke from the defendant Kanamori Matsukichi 30 cases of gin bearing the mark of J. P. Benkers; that the contents of said cases after tasting were found to be entirely different from the sample he first tasted, and that he found the same so bad as to be undrinkable; that the plaintiff received said cases of gin, and got them conveyed immediately to von Hemert's premises at No. 25 just in the same state as defendant brought them to him; that von Hemert sent said gin to be sold to a foreign merchant in Hiogo, and that the aforenamed von Hemert had informed plaintiff that the gin had been returned again on the plea that the mark on the bottles was really that of J. P. Benkers, but that after tasting, the contents had been found extremely bad and not to be Dutch gin; that he, plaintiff, then tasting it also, and having found the same to be nearly extremely bad, and entirely different from the sample's quality, consequently claims the reimbursement of what he paid for the gin, with the commission due to him, together $150, plus $25 for expenses. Moreover notwithstanding that the defendant maintains the sample to be the same as the goods, still the same being really so bad as to be undrinkable, if such had been the case in the commencement the plaintiff would not have bought it, but as there remains happily some of the original sample that was received from the defendant in the beginning, plaintiff demands that the quality of the gin in question may be compared with said sample.

Defendant's answer is that at the time plaintiff took delivery of said gin, the latter received exactly 30 cases, out of which he took a bottle, tasted the gin, and this done, paid for it; that at present plaintiff pretends to complain about this gin being bad, and the same not being Dutch gin, and moreover claims reimbursement of the money he paid for it, indemnity etc., which defendant maintains in no way to be obliged to repay to plaintiff. Further, that plaintiff has brought with him a bottle with some gin in it, which he pretends to be the sample received from defendant at the beginning of the transaction, and demands that the gin of the 30 cases be compared with this sample, but said bottle not bearing any seal of defendant's, the latter declares that the same cannot be recognized to be a true sample. Moreover, as said before, whereas a sample was taken by plaintiff out of the 30 cases and tasted by him, the existence of an inferiority in the merchandise in question cannot be admitted.

In short, the meaning of von Hemert's evidence is, that the 30 cases of gin, which he received during the month of June, 1876, from plaintiff Zembsch, after having sent the same to Hiogo, were returned to him by the buyer from that port on the plea that that gin was undrinkable; that witness consequently had taken a bottle out of one of the cases, tasted its contents and he declares he found it to be a most horrible and unsatisfied stuff.

The decision is as follows:

Notwithstanding plaintiff proved with witness von Hemert the gin in question to be inferior to the sample, still defendant maintains that said sample not bearing any seal from him, cannot be considered to be the sample given by defendant, and consequently the most pressing just said sample being compared with the gin in the 30 cases. Plaintiff requested in such case that, notwithstanding the mark bearing Dutch the contents not being Dutch gin, but a counterfeit experts should be nominated in order to decide whether this gin be of the value which was paid.

Defendant attests that notwithstanding he sold said gin on sample as it bears no respectively of any country's manufacture, and in consequently not regarding it to be of Dutch brand or not, still he is willing to see experts called to decide whether the price paid was at the time of the transaction that gin's value. Consequently three experts were called by the Court, of whom two declared, after having tasted the gin, the same not to be Dutch gin but a counterfeit and to be undrinkable, and that it must have been mixed with some other liquid; that it is rather difficult to tell the value of gin, but that to his knowledge a case of first quality has a value of from $5 to $5.50, and of second quality from $4 to $5, but that he valued this kind at from $1 to $1.25 per case at the most.

The other expert found this to be gin of the second quality, and to have had on June, 1876 a value per case of $4.80, more or less; and the third expert found also the same to be of second quality, and to have had at the before mentioned period a value per case of about $4.50.

Consequently the number of experts who found said gin to be of second quality being in majority it is decided to be of second quality, and whereas it is thus found that defendant has not sold to plaintiff gin of inferior in value to that which it was sold for the decision made by plaintiff for recovery of the money paid is unjustly, etc., is hereby dismissed, and plaintiff condemned to pay costs.

The 19th day of 12th month of 9th year Meiji.

Friday, December 22nd, 1876.

H. AHRENS & CO. *v.* OMIA SHOBIYA.

JUDGMENT.

(Official Translation.)

After examination of above case the particulars show to be as follows:

Plaintiffs declare that on the 7th of October, 1876, the defendants bought from plaintiffs' firm 100 pieces of Presidents cloth at the rate of 82½ cents per yard under agreement that defendant should take delivery of same not later than the 19th of October, that after a few days had passed, defendant not appearing, latter was requested by plaintiffs' firm several times to take delivery by portions and promised also to pay to plaintiffs' firm the amount of bargain money they plaintiffs should decide; that defendant did not keep this engagement neither, but that on the 23rd of October, defendant came with 300 *yen*, and that plaintiffs kept this money as a bargain on the between them passed contract; that further waiting still from day to day till this and defendant not having taken delivery yet, plaintiffs demand that defendant may be ordered to pay immediately the full amount of the transaction and take delivery of their goods

Defendant Tateibe Shobei declares that conformably to plaintiffs' statement that he did pass an agreement for the purchase of some President cloth, that a few days afterwards the defendant went to plaintiffs' firm and asked to see the goods in order to compare it with the sample, but that plaintiffs said that the goods would not be shown unless all the money would be paid for it first, that such being the case, it was arranged then to see and take delivery of it bale by bale and under these conditions defendant went and brought 300 *yen* to plaintiffs on the 23rd of October, but the plaintiffs only took this money, but did not show the goods, according to their promise. For that reason, defendant obtained Takahashi Tsunekichi of Tōkiō, Sakaicho, and Kubota Sosaburo of Tōkiō, Nihonbashi-tori itchome, to come with him on the 3rd of November 1876 to plaintiffs' firm, and got them to examine the quality of goods in question, and which were found

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to be by them of a very inferior and bad quality. That he defendant thus in consequence of such a breach of contract from the part of plaintiffs claimed then from them the reimbursement of the before mentioned 300 *yen* and also a suitable indemnity and that plaintiffs then to this effect asked for a delay until the 10th of November of this year, but that defendant finds entirely contrary to right that plaintiffs should in contrary from their side now complain against defendant, whereas if the goods had been found to be conform to its sample he defendant would of course have taken delivery of immediately and would undoubtedly have paid its contracted price in full

The decision is thus as follows:

1st.—That the reason why defendant refused to take delivery is based simply upon the fact that the experts declared the goods to be of an inferior quality, but these experts having been chosen entirely and personally by defendant and thus not being officially selected, the Court has deemed it necessary, and thus did nominate another expert in order to get the goods anew examined; and as this expert has found the goods to be in quality equal to the sample the defendant's pretension of the goods being inferior to the sample in quality is not admitted.

2nd.—That the case being as before described defendant is hereby ordered thus and conformably to plaintiffs' demand to take delivery of the 100 pieces of Presidents cloth contracted for, and to pay to plaintiffs, after deduction of the 300 *yen* already received by latter, the balance still due of 2,700 *yen* with an interest on same at the rate of 6 per cent per annum, from the 24th October till the day payment shall be effected.

This 22nd day of 12th month 9th year of Meji
(22nd December, 1876.)

ARRIVAL OF THE FRENCH MAIL.

(Straits Times Extra.)

St. Petersburg, 18th November.—The goods traffic on the railway in Southern Russia is stopped.

London, 18th November.—Viscount Templetown is appointed to the Colonelcy of the 2nd Life Guards.

London, 19th November.—Yielding to England's pressing counsels, the Porte has accepted the Conference unconditionally.

Turkey will, probably, appoint Safvet Midhat Pasha as its representative, and Russia will, no doubt, be represented by General Ignatieff.

London, 21st November.—Russia is mobilising six army corps.

The Turks are evacuating Herzegovina and are massing troops on the Danube.

Lord Salisbury interviews the Duc Decazes to-day, and visits Berlin and Vienna.

English Engineer officers have arrived at Constantinople.

London, 21st November,—The departure of the 12th Lancers for India is suspended. They have been ordered to remain at Shorncliffe.

Despatch of Prince Gortschakoff, of the 7th November, in reply to Lord Derby's despatch of the 30th October, urges the subordination of the integrity of Turkey to guarantees which humanity and the peace of Europe alike demand.

Russian designs upon Constantinople were disavowed.

Another despatch of the 22nd October regrets England's yielding to groundless fears concerning the policy of Russia.

London, 22nd Nov.—A despatch from Lord Loftus of the 2nd November, states that he had a most cordial audience with the Czar, who urged the complete agreement of Russia and England, whose aims were identical. He solemnly gave his sacred word of honour that he had no intention of acquiring Constantinople. If obliged to occupy Bulgaria it would only be temporary.

His Majesty deplored England's distrust, and said the idea that Russia intends the conquest of India was absurd and impossible.

London, 22nd Nov.—Sir William Hackett has been gazetted Chief Justice of Ceylon.

The Lancashire cotton dispute is settled.

The Indian transport *Serapis* has passed through the Suez Canal outwards.

London, 23rd Nov.—The Czar, in receiving certain high personages, stated that he still hoped for peace, but his honour was pledged to obtain autonomy for the insurgents.

Lord Salisbury had an interview with Prince Bismarck yesterday.

Berlin, 24th Nov.—At an interview, on the 22nd instant, Prince Bismarck assured the Marquis of Salisbury of the pacific intentions of Germany. In the event of a collision upon the Eastern question, between Russia and England, Germany would observe neutrality.

Calcutta, 25th Nov. 12-11 p.m.—The *Gazette, Agricultural Department*, publishes a Minute from the Lieut-Governor, detailing a visit to the Eastern districts suffering from the effects of the recent cyclones.

His Honour estimates the number perished at upwards of 215,000.

Effective relief is being given to the survivors.

MODERN MOUNTAINEERING.

(The Spectator.)

During the last ten years, Mountaineering has not only in some respects changed its character, but has become more generally recognised than before by the public as a legitimate mode of physical recreation. On the one hand, ascents of the greater peaks, which used to be confined to a small band of experts, are every summer made by persons in their first "season;" on the other, some ascents of importance have been made without guides. It may be useful, therefore, to discuss the extent and causes of this changed aspect of things, and to endeavour, in passing, to throw as clear a light as may be on a subject on which we believe that many misapprehensions exist.

That the mountains are ascended with much greater facility than they formerly were is evident to all visitors to Switzerland. Ten years ago it was considered a proof of some training and skill to ascend the Weisshorn; now, at most, the ascent speaks to two or three weeks' walking in the Alps. It is a fact, belonging to the same early period, and perhaps in danger of being regarded as a myth by some of our readers, that a pair of gentlemen who, towards the end of their second season in Switzerland, were arranging an ascent of the Jungfrau, were warned by an accomplished mountaineer against the difficulties of that mountain, and recommended to try the Finsteraarhorn in preference. Now-a-days the ascent of both peaks without guides is hardly considered worthy of remark. In point of fact, as things are at present, the one requisite for success in the case of a young man of average health and walking-powers who wishes to try the excitement of or get a name for the loftiest Alpine climbing is money. The mountains have become so hackneyed, and the guides are so eager for their fees that it is hardly likely that the latter would decline to accompany a party of inexperienced persons on any first-class expedition, provided a sufficient number of them were engaged. All the humility of the earlier aspirants has vanished. In former times there were many men who would be too modest to attempt the harder peaks in their first season; now a youngster will rush out from England for the first time to do the thing, and "bag" as many peaks as would have crowned a veteran career of yore. With such men all is business; the poetry and beauty of Nature are for them idle sounds. To them universally, as formerly it was to a few Americans and others, it is a mere waste of time to turn off the path to some noble and unique point of view, which in their eyes is but a summit of no importance, and that does not "pay." The glacier world impresses them with no awe, and conveys but a slight sense of grandeur, which hardly survives the first day's experience. Its phenomena are passed by unnoticed, because unknown, its magnificent proportions are unsuspected, because viewed with eyes and mind untrained. It has no present interest for them but as a farrago of "agenda," its past associations are pleasant or the reverse as its "acta" appears to them to be superior or inferior to the performances of others, in respect to the time taken and other points of comparison. Nor do these would-be mountaineers trouble themselves with maps, except, perhaps, as part of the conventional mountaineering equipment. It is enough for them to have pointed out to them by their guides the more prominent mountains that the day's course presents to their notice; and so vague sometimes are the impressions they have derived from the same often precarious source of the names of the passes they have been traversing, as completely to baffle, by their subsequent description, a person well acquainted with the district. Not long ago a gentleman "doing the high-level route," arriving at a place whence several passes of varying interest were open to him, and being asked at *table d'hôte* which of these he was going to take, replied that he

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

really did not know; the [illegible] he was to pass [illegible] per[illegible] to a [illegible] those of [illegible] is [illegible] long [illegible] he [illegible] standard. [illegible] urgently [illegible], [illegible] reverse of [illegible] such expressions as [illegible] persons on [illegible] large [illegible] known [illegible] intelligible [illegible] by [illegible] of difficulty [illegible] upon what [illegible] the [illegible] Taylors, [illegible] guide books [illegible] interest [illegible] latter [illegible] good [illegible] spare your [illegible] in 2 hrs. 57 [illegible] Eh? [illegible] tenacity as to [illegible] you in turn [illegible] or the day [illegible] next the [illegible] shoulder [illegible] tyro at [illegible] lessons should [illegible] unless it [illegible] suit to [illegible] authority and [illegible] a thing of a day. [illegible] respectable [illegible] a ready man will acquire [illegible] has guides does not necessarily [illegible] should he be thrown by [illegible] on his own resources.

One evil is the natural consequence of this rush to the Alps. To do the thing in the best style, the best available guide must be procured. With first rate guides, not only new and ambitious projects be entertained than otherwise, but [illegible] by their distinction on the travellers who have been fortunate enough to secure them. But the first rate guides are few in number, nor are the other guides of equal a large class. The [illegible] result is a competition between what we may call the [illegible] of the Alps and the moneyed upstarts, as [illegible] A temptation to desert their regular employers [illegible] is thrown in the way of the guides by large offers, to which, in some cases, we believe, they have been known to [illegible] and in many case, the old employers find it necessary to [illegible] It has now become quite out of the question for a man who means little more than [illegible] the summer [illegible] to adopt the ordinary mode of [illegible] the [illegible] employment of a guide, or a guide and porter, for a series of weeks. A rate such as has lately come under our notice in the case of an ordinary guide 50 fr. for peaks, 25 fr. for passes, and 5 fr. for intermediate days can clearly not be extracted from a very large margin. Proud, as we have reason to be, of the [illegible] our countrymen, the truth still remains, that they and a few well-[illegible] individuals from other countries have for years [illegible] the services of the competent guides. The [illegible] temperament of many of the writers in the Swiss Alpine Club Jahrbuch cannot but inspire the [illegible] such meritorious persons in their own country should freely have had access, as a rule, to [illegible]

The real cause of the [illegible] years is to be looked for, not merely [illegible] themselves, for though difficulties [illegible] every year, in the main the higher Alps remain the same as of old; but in the gradual accumulation of general and particular knowledge of mountains on the part of the guides as a class. Within the period we are discussing, confidence has taken the place of [illegible] security that of a dread of risk; the nature of the work, its [illegible] and difficulties, are better understood than formerly. Not that the skill and sagacity of the first-rate guides of the present day are superior to those of the old men, but the [illegible] confined to a few is now distributed, by training and [illegible] among a far [illegible] number. It is now a well recognised [illegible] that mountaineering, under ordinary circumstances, and with [illegible] weather, is free from appreciable risk.

[illegible] we [illegible] not long ago expressed his opinion that [illegible] instances, real mountaineers would only be able [illegible] to [illegible] by going in parties without guides. Certainly, our professor has successfully differentiated himself, for [illegible] of [illegible] mountaineers who have ascended [illegible] unaccompanied. As, however, no one can [illegible] without certain amount of risk to his [illegible] impossible to eliminate altogether in [illegible] [illegible] blindly into a crevasse, it would [illegible] to meet the charge of foolhardiness. [illegible] mountaineers, no doubt, can perform easy [illegible] laying themselves open to such a charge; and [illegible] ascent of a mountain, usually considered formidable by three such gentlemen under favourable [illegible] may fairly be a question whether the aspect of [illegible] mountaineering is not partly responsible [illegible] was an influential motive with the [illegible] may not be an honest desire to "differentiate" [illegible] from pseudo mountaineers. Apart from the [illegible] which mountaineering guides may be presumed to have [illegible] discontent at finding themselves in common [illegible] with [illegible] the upstarts may, rightly or wrongly, have [illegible] such persons' minds, and tended to dissatisfy [illegible] with [illegible] mountaineering. The public, however, [illegible] with the results of their actions than with the [illegible] which led them. Are we likely to see a "furore for [illegible]" Is Mr. Cook likely, within the next ten years to [illegible] a cheap trip to the top of the Matterhorn? We [illegible] that, if he does do so, that, till the railway is made, at least as far as the "shoulder," with slow trains stopping at the "hut," that enterprising gentleman's office will be besieged by persons [illegible] the price of their coupons. In our opinion, [illegible] rich men not real mountaineers are at present likely to take to mountaineering without guides. The first class would miss their object in coming out, which is to "do" peaks. Such mountaineers, to obtain even a moderate amount of success, must in the nature of thing require, in ordinary cases, years of training, at first with and afterwards by small degrees without [illegible]. The results, moreover, that may be expected are at best of quite a humble order. The passage of the Col d'Hereus, or of the Adler, may [illegible] a thrill of pleasure that will be remembered for life, but to our upstarts these excursions are mere [illegible] elements. A real love for the thing can only compensate a man for the attendant discomforts, such as the burden of provisions and knapsacks, the comparative length of time consumed, and the chance of failure, and for the mortification of finding himself, after all, a nobody, compared with others who are meantime [illegible] gaily from one first class peak to another. As to the [illegible] they are too much wedded to their favourite guides [illegible] in their [illegible] they are too hopeful of accomplishing some [illegible] to make it worth their while to return to what is [illegible] in results and contrary to the received conventionalism, except in a few cases here and there, where special fondness for [illegible] has been accidentally originated. The mere fact that with [illegible] guides now [illegible] mountains that no amateurs without guides would even attempt, at any rate, without previous knowledge of the route, is sufficient to justify the above comparison of [illegible]. The [illegible] is as humiliating in a sense as it is obvious. Really good guides are so superior to the best amateurs, that they can [illegible] even mediocre climbers over difficulties which the others could not even pass, though not so impeded. It is as absurd to [illegible] a first rate amateur with a first rate guide, as to compare the [illegible] of a University gymnasium with a Tom Sayers. There are some amateurs who are superior to the best professionals in general or geographical knowledge of the Alps, but no amateur [illegible] approximates to the latter in the instinct, grown into a second nature, by which they can thread their way among difficult rocks, and afterwards retrace the same. There are amateurs whose surefootedness, like that of many a common peasant of the higher valleys, is not likely under any circumstances to fail; but in difficult ice work, in step cutting and the like, the first-rate guide is without a rival in the world. It was once sagely remarked by a mathematician, himself one of the boldest and most

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

accomplished of English mountaineers, that the difference between one amateur and another was so slight, in comparison with the difference between all amateurs and good professional mountaineers, as to be practically inappreciable. What a first-rate guide can do for a traveller in case of emergency was shown, in striking contrast with the recent occurrence on the Felik Joch, by J. A. Carrel, when escorting a Scotch lady across one of the most bewildering snowfields in the Alps. Beset by a snowstorm, the route and the hope of a safe descent lost, he set to work, aided by the porter, to build a snow hut for his charge. An air-hole only being left, the party, though wet, maintained their warmth and comfort from the afternoon till eleven o'clock the next morning, and reached their destination afterwards none the worse.

On the Matterhorn, eleven years ago, a warning was conveyed that ought never to be forgotten, and cannot be too often reiterated. A promising specimen of a climber in his first season made the slip; and a gentleman, reckoned by many the first amateur of his time, allowed the slip when made to assume disastrous proportions. The first had grown so demoralised as to fall in an easy place: and second was letting the rope hang in a loop of ten or twelve feet behind a struggling man. We cannot conceive a guide so to have omitted to observe the most essential rule of security in such circumstances.

After all, the old style holds its own. It is the true mountaineers, as a rule, those who return again and again to the Alps, who achieve whatever there is remaining of difficult or new. Not only are the best guides generally engaged by their old friends, but the parvenus are seldom taken by their guides off the beaten round of "first-class peaks." A reserve of a certain class of expeditions is maintained for well-known names and well-tried feet.

GEORGE SAND'S AUTOBIOGRAPHY.*

(Saturday Review.)

The autobiography of George Sand has been republished in four closely printed volumes of moderate size, and appears less formidable than in the numerous volumes of the original edition. No arrangement of type can, however, make it anything but a very long and not very readable work. There is some interest attaching to parts of George Sand's story, and there are passages in the book which no one but George Sand could have written. But it is lamentably diffuse, and is stuffed with extraneous padding beyond the limits of even an indulgent reader's indulgence. More than a fourth of the work is not in any sense the history of George Sand's life. It is a publication of a pile of letters which her father wrote to her grandmother before she was born, or while she was a child in arms. It required all the assurance of an established literary reputation to offer as a portion of an autobiography the letters of a person who had been dead fifty years when the autobiography was written, and who died when the autobiographer was three years old. That the autobiography proper is made to last through so many pages is chiefly due to the style of writing which in George Sand was partly natural, and partly fostered by the pleasing sense of facility accompanying its use and by the knowledge that every page she wrote would be paid for. In one way her style is admirable. It is flowing, easy, free from affectation, and full of masterly turns of language. In every page there are sentences which are models of French composition.

But it is a style sigularly adapted for the practice of the great art of spinning out what the writer has to say. She found it at once pleasant, easy, and lucrative to give half-a-dozen pages to a description of the birds she kept, and as many to a memoir of her dolls. This kind of easy writing is proverbially hard reading, and George Sand never abandoned herself to it so completely as in her autobiography. She is never prosy, for she writes too well; but she often inspires the feeling with which we listen to a good sermon after we begin to feel hungry. It is excellent, but we wish it would stop.

The mode, therefore, in which the work is composed is enough to prevent its ever becoming popular. The materials, too, which the writer had at her command are not of a very engaging character. They are, to a large extent, only materials because the writer chooses to say they are. There can be no end to autobiographies if the historian is free to chronicle everything that may in some obscure way have influenced character, or come across the thread of existence. At the opening of the work the reader is offered an elaborate portraiture of George Sand's great-grandfather's second wife. This lady had not the remotest connexion with George Sand by lineage, and could have had no more influence on her character than Marie Antoinette had. But she made a person to write about, and any person or thing that could be somehow connected with a relation, a friend, or an acquaintance, came within George Sand's unbounded notions of the permissible materials of an autobiography. All that can be said for the book is that anyone who likes to read it will have gone through nearly two thousand pages of exceedingly well-written French, will know something about George Sand, and will have discovered some descriptions that are really powerful and some thoughts that are really suggestive. During the perusal he may have often regretted that two-thirds of the book were ever written. There is not the slightest harm in them, but they are either foreign to the subject or tediously diffuse. All this Frenchmen, it may be presumed, would feel as much as Englishmen. But to us in England peculiar obstables present themselves in the way of any very ready enjoyment of the work. It is the study of the life and character of a woman. It therefore takes us into a region of literature that is above all others distasteful. We have been saturated with studies of the lives and characters of women, with analyses of every shade of feminine goodness and badness, until the heart is sick and the soul faint at the prospect of adding to the long list of the delineations of how women feel, and why they feel, and whether they ought or ought not to feel. The virtues, too, as well as the failings of George Sand are thoroughly un-English. No English girl ever did feel, or could feel, ever did behave, as she felt and behaved. It is therefore hard to do her justice. No habit is more deeply rooted in the English mind than that of taking for granted that we ought to imitate what we admire; and it is perhaps true that we gain by the habit more than we lose. If it is asked whether the history of the life of George Sand is the history of a life to imitate which would make an Englishwoman happy and good, it must be answered that it is not such a history. But to do justice to George Sand we must approach her and her history from a different point of view. The difference between George Sand and the introspective heroine of English fiction is, first, that she really lived, and, secondly, that she was a woman of genius. If we once decide that we have nothing to do with her as a model of English conduct, we shall find in her and her history much that deserves admiration and respect.

When, however, we say that she is not to be taken as a model of English conduct, it must not be supposed that her autobiography is in the least tainted with the records or feelings of impurity. A book more absolutely pure could not be found. If she ever had any feelings or faults that would not bear to be written down, they find no place in her autobiography. The coldness of the book to all that has to do with the love of men and women is as the coldness of ice. Her warmth of feeling, so far as it finds expression in this record, ran in a different groove. She tells us how she esteemed her grandmother, idolized and quarrelled with her foolish mother, bore with the brutality of a drunken brother made and kept a few intimate friends while she shocked a provincial public by her eccentricities, was the sister of the poor, adored her children, and especially her boy, with a jealous infatuation. When, again, it is said that there was much in her to love and admire, it must not be supposed that she depicts herself as a person whom it was at all easy or pleasant to live with. She professed to write the truth when she wrote her history, and she certainly does not paint her own portrait in very glowing colours. She was by nature very melancholy and very excitable; she was often brooding, and was often seized with spasmodic views of her duties. She was constantly taking up new and quaint views of her relations to others in the depths of her soul, and astonishing her little circle by the varying lights in which she regarded them. She was not practical. She was obliged to give up housekeeping because she could not keep within the sum fixed for her expenses. In a quarter of a century, by the hard labour of her pen, she made nearly a million of francs, and at the end of the quarter of a century she was still obliged to write to live. She was eccentric, and she was eccentric on principle. To escape from the bondage of conventionalities seemed to her the height of bliss, and she found one method of such escape in constantly dressing in men's clothes. She separated herself from her sex even more completely by a hatred for the toilet and all that has to do with it. She took part in *la chasse* after a truly French fashion, pushing her ardour to the length of rheumatism in the art of decoying quails into a net. When her society did not suit her, she used to go to her bedroom and ponder over the mystery of existence. A woman less suited for the ordinary routine of married life could not be conceived, and perhaps

best excuse for making her husband indifferent was that she was really and truly miserable herself.

The simple outline of her story may be briefly summed up as follows: Aurora Dupin was the granddaughter of an illegitimate daughter of Marshal Saxe, who, after having been married to Count Horn, was considered to be descending in her second marriage with M. Dupin, the son of a farmer general. He was sixty when he married, and died at seventy, leaving his widow with one son and a fortune embarrassed, though still considerable, out of the wreck of which she bought the small property of Nohant in Berry, which descended to George Sand, and where the novelist spent most of her life, and where she died a few months ago. The son lived to be an officer in the army, had the honesty to marry the mother of George Sand, the daughter of a bird-seller, just before the birth of Aurora in 1804, and was killed by a fall from his horse at Nohant in 1807, when Aurora was three years old. The child was passionately attached to her mother, a foolish, excitable, ignorant woman; but her grandmother, who was not only the great lady of the family, but a woman of character and sense, with a sort of Voltairian high breeding, prevailed in the family contests that inevitably ensued, and the little girl was left in her charge while the mother went off to Paris. Aurora was educated by a dependant of the family, who had previously been the tutor of her father. She had, she tells us, no memory and no love of study, and, although she acquired a habit of discussing subjects much beyond her years, she made little progress in languages or accomplishments. When she was fourteen she was sent to the English convent at Paris, where, after having at first distinguished herself as one of the ringleaders of a hoydenish mischief, she suddenly took an intensely devout turn, and wished to devote herself to a religious life; but she was firmly and judiciously discouraged in her purpose, returned to Nohant, where she was allowed to do as she pleased by the convent authorities. At sixteen she left the convent and exchanged devotion for philosophy, wandered about the fields dressed in boy's clothes with her former tutor, and rode, thought, and wept to her heart's satisfaction. When, however, she was little more than seventeen her grandmother died, and she went to join her mother at Paris. There in the following spring she met M. Dudevant, and married him in the autumn. It was a marriage, if not of love, yet of inclination, and she chose for herself. But it was from the outset an unhappy one. It is greatly to her credit that, whatever complaints she may have had against her husband, they find scarcely any place in her autobiography, while she freely gives us to understand how very trying she must have been to her husband, with her fits of depression, her indifference to the life around her, and her adoration of her baby. At last, after eight years of discord, she made, and her husband gladly accepted, the proposal that she should live at least half the year in Paris. All that she asked was sixty pounds a year to live on, and she purposed making up by writing what more was necessary. She took a garret and dressed as a man, this form of clothing being, she tells us, much more economical as well as more comfortable than that of a woman. Even with this help she found it very hard to support herself and her youngest child, a little girl, but she felt she could write and persevered. Jules Sandeau so entirely recast her first effort, *Rose et Blanche*, as to make it his own. The publishers asked for another work, and as *Indiana*, her next effort, was entirely her composition, Jules Sandeau could not put his name to it, and her husband's family strongly objected to her putting her own. A friend suggested that Sand would be a happy compromise between borrowing and abandoning Jules Sandeau's name altogether. She prefixed George as a common Berry name, in harmony with her clothes, and calculated to propitiate the critics, who would not easily have allowed that a woman could write well. *Indiana* was followed by *Valentine*; and before she was thirty she found that she had won a position which so long as health and strength lasted, would secure her a modest competence; and in 1833 she was able to go to Italy, and find in Venice the foundation for the first portion of *Consuelo*. In 1835 she separated finally from her husband, obtaining a judicial decree in her favour, after charges and recriminations of a very painful kind. Finally, in 1838, she bought of him, to use her own words, the exclusive management of her two children for 2,000*l.*, and thenceforward their relations were of a very distant but amicable kind. Her boy's health was precarious, and she took him a long journey in the south of Europe, accompanied by the musician Chopin, with whom she lived for eight years on a footing of maternal friendship, although she often found him an insufferable nuisance, as he was even more depressed, wayward, and irritable than she was herself. Accident or predilection led her to place herself subsequently under the guidance of the leading Socialists of the day; and there appears to have been no one in her long and varied career whom she worshipped with the ecstatic admiration that she bestowed on Pierre Leroux. Towards the end of the reign of Louis Philippe she began to collect materials for her autobiography, and finished it by composing at intervals in the seven years from 1848 to 1855. The new edition contains a short appendix, in which, in the form of a letter to Louis Ulbach, she brings her history down to 1869; but the notice she supplies of her late years is too scanty and general to add anything to the reader's knowledge of her life; and if fresh materials are needed, they must be sought in the numerous works which she continued to publish until death arrested her pen.

An impartial perusal of the autobiography will give, on the whole, a high notion of George Sand's character. Many as were her faults, and great as are the imperfections of her writings, there was both in her life and in what she wrote a spirit of nobleness which, if sometimes obscured, was never absent. She strove to think and to act rightly. Her bent was to what was extreme, but it was also to what was generous, and she devoted herself to what seemed from to time to her to be true. She threw herself passionately into the most mystical form of Catholicism, and then with equal passion into a philosophical creed which had at least the merit of satisfying her. She had a deep sense of the misery of the world. It gave her genuine pain that vice and misfortune made so many human beings unhappy, and would continue to make them unhappy in spite of anything she could do for them. She was on all occasions ready to do anything for anybody. Her demonstrative attachment to her mother was chiefly due to a wish not to have it thought she was too proud to own a mother much below her father's family in position. Through evil and good she clung to her friends, and her great fidelity to her. Her constant poverty was in a great degree caused by her profuse charity. The thought of God and the thought of the poor were the two main thoughts of her life. She was not talking more than truth when she said that what made her really happy was the consciousness that, however much she might be decried or blamed, she clung to truth. Admirable as may be this clinging to the truth in the sense in which George Sand meant it, those who are qualified to enjoy the happiness it affords are very limited in number. It means clinging to a full, unusual, decisive opinion, and such opinions are generally formed by seeing things from a single exclusive point of view. This point of view may be the right one, or it may not, while the happiness of adhering to it seems much the same in either case. Whatever merits, however, there are in honest enthusiasm, George Sand possessed them, and it is undeniable that much of the interest of her writings depends on her power of inspiring the conviction that, if she was an enthusiast, she was an honest one. At the same time she was neither in her life nor in her writings wanting in a streak of common sense. She was always ready to retire from society, to live a humble country life, to share the griefs and joys of the poor. She kept entirely out of the region of current politics. She knew that she knew nothing of history or science. All this is reflected in her works, which are for the most part distinguished by a sensible want of sense. Of the more intimate secrets of her genius her life tells nothing, as they were necessarily unknown even to herself. Neither her history nor her self-analysis could explain how she came to write *Mauprat* and *Consuelo*. It is enough for those who care to pursue the study to find that in her writings there were elements constantly present which were reflections of what she herself felt, or did, or suffered; and that it may be said for her, what cannot be said for all writers of genius, that on the whole she gained by the story of her life, or of as much as she could tell of it, being known.

A Washington telegram states that Sir Edward Thornton, the British Minister there, and the American Postmaster-General have signed an agreement fixing largely increased territorial transit charges for Great Britain to pay for the conveyance of closed mails from Boston or New York to San Francisco. This agreement replaces the Treaty of 1868; it is terminable at a year's notice, and provides rates covering the cost of transportation. It makes the rate 6*f.* per kilogramme for letters and 2*f.* per kilogramme for printed matter and samples.

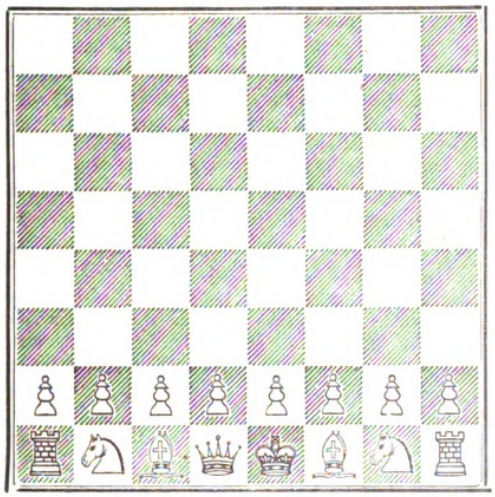
CHESS PROBLEMS AND GAMES.

As doubtlesss many of our readers interested in the game of Chess will find more time than usual during Christmas week for the pursuit of their favourite pastime, we present to them the following Problems and a Game by S. Lloyd, taken from the *American Chess Journal* for June, 1876.

BLACK.



WHITE.

1.—White to make sixteen moves and have all the sixty-four squares commanded.
2.—Place Black King on Queen's Rook's 5th and mate in five moves.
3.—Place him on some other square and mate in three moves.

Also, add the Black forces and seach as follows:
Black to move six times so that White can mate in one move.

ORIENTAL CHESS.

And great was the consternation of Yang-Hi, the Professor of Universal Knowledge, when ushered into the august presence of his Imperial Master, and informed that an audacious aspirant for fame had dared to challenge the Expounder of Wisdom and Reader of Mysteries to a trial of skill by Chess.

Yet no one would have suspected his entire ignorance of the game, from his benign smile and the complacent wave of his hand, as he informed his opponent that he always accorded him the first move.

After eight-and-forty hours had been spent in gazing upon the chequered field, he made a move the exact counterpart of his opponent.

On his next move he consumed an entire week, apparently engrossed in the deepest study, and again made a move similar to that played by his antagonist.

Thirty days passed by ere he made his third move, which had the same characteristic of his former moves of being the exact counterpart of the play of the other. But in this third move he was at once checkmated.

With a graceful motion of his jeweled hand, he stayed the tumultuous courtiers, and turning to his victorious opponent, addressed him as follows:

"Presumptuous and base born idiot, before conceit destroys thy understanding, hasten to learn that while thou didst shatter thy weak intellect upon a fruitless victory, given for thy destruction, I pondered not upon the game of the present, nor of the second, nor third—but my far reaching calculations were planning thy disgrace upon the fifth game, while thou satest, with the stupid patience of the ass, and gazed with the vacant glance of the owl, exulting in thy folly.

That my people may scoff at thee, and see the depth of my wisdom, I will proclaim the play of the future; and remember, that upon the truth of my predictions depends the safety of thy head upon thy shoulders."

"On the next game, to show the folly of thy play, I will again imitate thy moves, and on my eighth move I will be compelled to give thee mate. In the third game I shall mate thee by a discovered check on my fourth move. In the fourth game thou mayest scatter or capture my forces, and I will play as thou desirest, yet I will make but nine moves before thy all-abounding stupidity will so encompass my king and queen that they are stalemated. And on the fifth game, that thou mayest become a laughing stock, I shall so play that on my third move I commence a perpetual check, that allows of no termination, and a slave shall be ordered to play and buffet thy king for forty years."

And all the people queried, "How can such things be?"

SOLUTION OF CHESS PROBLEM BY W. H. T. LAST WEEK.

White.	Black.
1.—Q. to Q.'s 5.	1.—B. takes B.
2.—Q. to K.'s 6.	2.—K. takes Kt.
3.—Q. to Q. Kt.'s 3, mate.	or K. to K. B.'s 6.
or Q. to K. R.'s 3, mate.	

A.

	1.—moves B.
2.—B. takes B.	2.—K. takes Kt.
3.—Q. to Q. Kt.'s 3, mate.	

Correct answers received from C. B., E. J. R. and Delta, Yokohama; W. H. S. and W. B. M., Tôkiô.

Shipping Intelligence.

ARRIVALS.

Dec. 19, *Hiogo Maru*, Japanese steamer, Christensen, 869, from Hakodate, Dec. 16, General, to M. B. Co.

Dec. 21, *Nevada*, American steamer, Williams, 2,145, from Shanghai and ports. Mails and General, to M. B Co

Dec 21, *Meiji Maru*, Japanese steamer, Peters, 1,010, from ar cruise down the Coast.

Dec. 22, *Paul Marie*, French barque Gaillard, 324, from Nagasaki, Coal, to Order.

Dec 23, *Tanais*, French steamer, Reynier, 1,735, from Hongkong, Dec. 16, Mails and General, to M. M. Co.

DEPARTURES.

Dec. 17, *Tennessee*, American frigate, Captain Young, 4,000, fo Hongkong.

Dec. 18, *Hedwig*, Swedish barque, Oberg, 362, for Chefoo, Ballast, despatched by Captain.

Dec. 19, *Menzaleh*, French steamer, Pasqualini, 1,503, for Hongkong, Mails and General, despatched by M. M. Co.

Dec. 19, *Dragon* British steamer, Gravatt, 472, for Hakodate, Ballast, despatched by Jardine, Matheson & Co.

Dec 21, *Meiji Maru*, Japanese steamer, Peters, 1,010, for Southern Coast, Stores, despatched by Lighth use Department.

Dec. 21, *Hiroshima Maru*, Japanese steamer, Furber, 1,870, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Dec. 21, *Ferris S. Thompson*, American barque, Potter, 531, for Kobe, General, despatched by L. Knuffler & Co.

Dec 22, *Peeress*, British barque, Miller, 780, for Kobe, General, despatched by L. Knuffler & Co.

Dec. 23, *Spirit of the Age* British barque, Johnson, 347, for Hongkong, Ballast, despatched by Captain.

Dec. 23, *Hiogo Maru*, Japanese steamer, Christensen, 869, for Hakodate, Mails and General, despatched by M. B Co.

PASSENGERS.

Per Steam-ship *Menzaleh* for Hongkong.—Mr, and Mrs. Von der Heyde and child. Mr and Mrs. A. Skene, Messrs. R. H. Crew, Hibernac, H. Faber, and F. Hoffmann.

Per Steam-ship *Hiroshima Maru* for Shanghai and ports.—Mr. R. V. Boyle, C.S.I., and Mrs. Boyle, C. W. Goodwin, Esq. and son, Messrs. Kaza Hatani, Katayami, Kane, Takasugi, Nazaki, Bruegman, F de Azavedo, E. F. Wetmore, Williams, Horsfall, Farquharson, Asada, N kajima, Tojima, and Katayama.

Per Steam ship *Nevada*, from Shanghai and ports.—Prince Hosokawa of Higo, Mr and Mrs. Rymer Jones, Mr. and Mrs. Coignet, Captain Vroome, Captain Rimey, Messrs. Baughman, U.S.N. Brandt, Lemmer, Vale, Olson, Dannalovitch, Kirby, Kleinwort, Livingston, Cook, Joseph Huggan, Richardson, Gubbins, Tisley, Ascher, and 23 Japanese in the cabin, and 262 in the steerage. For America: 2 in the steerage.

Per Steam-ship *Tanais* from Hongkong.—Madame Jacquemot, Messrs. Schnell, Austin and Yeo.

CARGO.

Per Steamship *Menzaleh*, for Hongkong.

Silk for England	... 370 bales.
France	... 222 ,,
Total	... 592 bales.
Treasure for Hongkong	... $16,000

Per Steam-ship *Nevada*, from Shanghai and ports.

Treasure	... $100,000

REPORTS.

The *Tanais* reports strong N. E monsoon to Turnabout Island, thence pleasant weather.

"Berkeley, Sept 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

September 2, 1876. 26ins.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—We have again to report a dull market, the constant fluctuations in exchange making the situation still more difficult for importers. In general only a small business has been done at irregular prices, but at close there is a little more enquiry, though offers still continue very low.

Grey Shirtings:—					**White Shirtings—**		
7 lbs	38½ yds	39 in	per pce	$1 50 to $1 80	60 to 64 reed 40 yds	35 in	per pce 2 20 to 2.40

Kerosene Oil.—Auction sales having ceased, the market is firmer at quotations.

EXPORTS.

Silk.—During the past week business has been much hampered by daily fluctuations in exchange, and also by the interruption of telegraphic communications, owing to which the favourable advices previously received remain unconfirmed. We have, however, scarcely any change to report in the prices quoted on the 15th instant.

Since the 11th instant settlements are 650 bales of Hanks, and 250 of Oshiu and other sorts, leaving a stock of about 2,500 bales. The shipments of the fortnight are 1,024 bales, which bring the total export since 1st July to 17,850 bales, against 9,341 last year for the corresponding period.

	At Exchange 4 4 on London	At Exchange 5/10 at 6 m. s. on Lyons		At Exchange 4 4 on London	At Exchange 5/10 at 6 m. s. on Lyons
Hanks.—Best No. 1 & 2	$840 to $860	31 11 to 32 8	88 to 90	Hamatsuki No 1 & 2	$580 to 620	22 6 to 23 11	62 to 66
„ Good No 2	$800 to 820	30 5 to 31 2	84 to 86	„ No 3 & 4	$520 to 550	20 4 to 21 5	56 to 59
„ Medium No 2½	$760 to 790	29 to 30 1	80 to 83	Kakeda—Best	$900 to 930	34 1 to 35 2	94 to 97
„ Cmon No 3	$680 to 750	26 1 to 28 8	72 to 79	„ Medium to Good	$800 to 860	31 7 to 32 8	87 to 90
„ Inferior No 4 & 5				Sodai	$550 to 600	21 5 to 23 3	59 to 64
Oshiu—Best	$760 to 780	29 to 29 9	80 to 82	Filature Silk	$960 to 1000	34 1 to 37,9	94 to 104
„ Medium to Good	$720 to 750	27 7 to 28 8	76 to 79				

Silkworms' Eggs.—The stock left after the departure of the last American mail was about 200,000 cards, and the Japanese Association, who have the control of it, have decided upon withdrawing it from the market, their object apparently being, by limiting the export, to improve the value of the shipments, which may be computed as follows:—

By Japanese merchants and bankers	210,000 cards.
By Yokohama firms	310,000 „
By Graineurs	565,000 „
Total	1,085,000 cards.

A few thousand cards have been bought here and in Tôkiô during the past fortnight at from 60 to 80 cents, to be shipped by the next American mail.

Tea.—The past has been an active week in our Tea market, settlements amounting to rather over 3,000 piculs. The demand for the lowest grades of leaf from *Low Common* to *Medium* kinds has been the principal feature of the business. Prices generally have ruled somewhat easier, some dealers being anxious to move stocks before the New Year.

The stock of leaf on offer being now reduced to 4,000 piculs, the market closes with a slight tendency to firmness at the following quotations.

Common	$10.00 to 12 00	Fine	Nominal.
Good Common	13 00 to 15 00	Finest	
Medium	16 00 to 18.00	Choice	
Good Medium	19.00 to 22 00		

EXCHANGE AND BULLION.

Exchange.—The past week has been one of daily, or almost hourly changes, apparently the most capricious considering that the business offering has been but small, although merchants have shown some inclination to operate in silk, but have been deterred from doing so by the uncertainty of the exchanges.

Rates close as follows:—

NEW ADVERTISEMENTS.

NOTICE.

MONDAY being CHRISTMAS DAY, there will be no issue of the "JAPAN MAIL DAILY ADVERTISER."

Yokohama, December 23, 1876.

NOTICE.

THE amount subscribed for the lighting of the Settlement having fallen considerably short of that required, it is proposed to make a trial of dispensing with the lamps for about seven nights in the month when moonlight may be calculated upon.

It is trusted this mode may be agreeable to the subscribers, and that the amounts they have promised still hold good.

For the Gas Committee,

A. WINSTANLEY.

Yokohama, December 23, 1876.

WILL BE PUBLISHED EARLY IN JANUARY.

PRICE 2 DOLLARS.

The Ladies' Directory,

FOR YOKOHAMA AND TOKIO.

INDEPENDENTLY of the general Directory which forms the indispensable requisite of the Merchant's office, the want has long been felt of one more exclusively devoted to social purposes, and containing such useful local information as the demands of daily life involve. The Ladies' Directory, now about to be published, claims to supply that want.

"JAPAN MAIL" OFFICE.

Yokohama, December 21, 1876.

BROADWELL'S

BREECH LOADING ORDNANCE COMPANY, CARLSRUHE.

MANUFACTURERS and Patentees of the **IMPROVED-BREECH**, STEEL RIFLED ORDNANCE, largely adopted in Europe and America: Inventors of the new Star ring artillery shell.

The Broadwell System is now applied to the Krupp Cannon.

The undersigned are prepared to receive orders and undertake contracts, on behalf of the Company, for ORDNANCE of any calibre, at the Company's tariff.

EDWARD FISCHER & CO.,

d. w. & m. SOLE AGENTS FOR JAPAN.

NOTICE.

THE UNDERSIGNED is prepared to attend to the **Landing, Clearing, or Shipping of Cargo** at this Port, at Reasonable Rates.

Custom House.

Yokohama, August 3, 1872. tf.

MISCELLANEOUS.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, who "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment, which "gave some to the people, and nothing could exceed their gratitude "and, in consequence, milk, fowls, butter, and horse-feed poured in "upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 29th June, 1874.

Notes of the Week.

The weather on Christmas Day was enchanting—a cool air, bright sky, and a pleasant, genial sun. Every house was decorated with evergreens, made more gladsome by the jocund red berries which here do duty for holly, and a thousand varieties of tasteful ornamentation were resorted to in celebration of the day we all hold so dear. But chief among all the decorative efforts of the settlement were those bestowed on Christ Church, which deserve the warmest commendation, and the sincere thanks of the congregation to the ladies and gentlemen who had bestowed so much time, taste and ingenuity upon them. The walls of the church were embroidered with illuminated texts from the Scriptures, a reredos had been constructed for the occasion in harmony with the other accessories, and we doubt if, throughout the East, a more appropriate and enlivening series of decorations could be seen in any building devoted to ecclesiastical purposes. Nor did the musical portion of the service deserve less praise. The choir was full, the organ well played, and every portion of the service adapted to music, with the exception of the Nicene creed, was chanted. Extremely touching and prayerful were the responses to the Commandments, taken to one of the most beautiful motives from Mendelssohn's Elijah—the chorus which immediately precedes the final scene on Mount Carmel—and lending itself admirably to the words and their spirit.

In the church of the Holy Heart of Jesus, midnight mass was performed on Christmas eve with good effect and before a large congregation, many of whom were Japanese.

———

We have been favoured with a work entitled "An Outline History of Education in Japan," issued by the Educational Department and specially prepared for the Philadelphia Exhibition. It contains a great deal of useful historical information upon the subject of which it treats, and bears ample statistical testimony to the great exertions which have been made by the present Government in the cause of education. At the time the work was compiled, the statistics for 1875 were not available, but those for 1874 show that at least 50,000 schools exist, attended by 2,000,000 of pupils. The income of the elementary schools in 1874 was *yen* 3,795,123, of which 1,080,845 *yen* were derived from voluntary contributions. The expenditure for the same year was *yen* 3,195,278, showing an increase of about one-half over that of the previous year. The various new colleges are enumerated—Military, Naval, Engineering and Medical—*à propos* of the latter of which we would enquire whether it is assumed that anything like a satisfactory medical education can be given to students so long as the chairs of Chemistry and Physiology are vacant. Under the head of Miscellaneous Educational Agencies we find the following reference to the periodical press. After an expression of of the high esteem in which literary men are held in the Empire, it says:—

> The newspaper, in the present sense, is a new institution in Japan, dating back only about nine years. The design in its first establishment was, to provide a means of explaining and defending the progressive measures which the Government had adopted. Since that time newspapers have multiplied rapidly, so that now there are more than one hundred published in different parts of the country. In the capital alone there are at least a dozen, many of which have a large circulation, two at least reaching ten thousand daily. The best literary talent of the day is employed upon these newspapers, and subjects of public and international interest are discussed with a force and intelligence which will bear comparison with the best journalism of the times. There is a bureau for the regulation of the press, and occasionally unpleasant collisions have occurred, but in the main a large degree of liberty is allowed by the Government, and a hearty support is to elicited by the press.

We must take entire exception to this statement. In the first place, it is an idle piece of flattery to say that the journalism of Japan gives evidence of anything like the force and intelligence of the best journalism of the western nations. Some of it is of very respectable ability, considering the general condition of the mind of the nation. But to compare it with the best journalism of Europe or America is to compare moonlight to sunlight and water to wine. Were the Press-laws interpreted with a fair amount of liberality, we should have no quarrel with the latter part of the paragraph, but it has been quite otherwise. Upwards of seventy prosecutions have taken place during the present year, nor shall we deny that some of them presented fair cases against the inculpated writers. But it cannot justly be said that a large amount of liberty has been granted to the Press, for the contrary is undoubtedly true. What might be pleaded is that, under a liberal administration of the Press-laws, as much liberty is given as the present condition of affairs permits, but more than this is certainly not true. The public writers are practically without any liberty to criticise the action of the Government adversely, and can only do so by implication and inuendo, a condition of affairs fatal to the existence of true journalism. An admirable example of this fact will be found in our columns this very day. That a hearty support has been given to the Government by the Press on the measure for the capitalization of the incomes of the nobles, gentry and lower *samurai* is unquestionable, although many of the public writers belong to those classes. But this was because the mass of the people are naturally strongly in favour of a measure which partially relieves them of an enormous burden. In the Formosan and Corean affairs the Press also stood well by the Government, though we doubt whether it had much choice. In regard to an extension of the personal liberty of the subject—its true office in its early stage—the Press is dead against the Government, but is grievously hampered in every movement by the severity with which the Press-laws are administered. We could hardly expect that a work issued by the Government should take an apologetic tone on this question, but it strikes us forcibly that the writer of the paragraph above quoted must have felt himself as much in fetters on this subject as the Press itself.—The whole question of education of this country deserves the deepest consideration of its best minds, and it is on this account that we have so often called attention to it. We have good reason to believe that a great deal of it is of an extremely superficial character,

Original from UNIVERSITY OF CALIFORNIA

that many of the class books used are of most inferior quality and that works giving altogether distorted views upon questions on which it is important for all to hold sound opinions, are extremely common. We will give an instance. We have recently seen some maps of the world, published in America and said to be in use in several educational establishments here, in which the continent of America occupies the middle space, for obvious reasons, while Europe and Asia occupy respectively the left and right sides of the map. The effect of this on the mind of a child or student of any age is to give an altogether false impression in regard to the relations of the various great continents to each other and the world. The object of such maps is not to teach sound geography, still less sound political geography, but to bring America prominently before the mind of the student at the expense of all sound views of its real relation to the globe. Everything is here given up to an idea which is wholly false, and it is truly lamentable to think that truth should be so utterly sacrificed to a feeling the reverse of respectable. No one denies that America plays an important part in the world's affairs, but to place the three leading nations of Europe in a position in which their geographical and political importance are intentionally distorted or dwarfed for the purpose of showing what a big place America is, is a parody upon education in geography. All such works should be brought, as were the books of the exorcists to the feet of the apostles, and burned. We do not suppose for a moment that maps of this class are used in the public educational establishments in Yedo which are under American supervision, as we have too high an estimate of the character and attainments of the gentlemen engaged in them to believe this possible. But not the less do these works effect a certain amount of mischief in other quarters. We are not without some serious misgivings in regard to this whole question at this moment. The death of Mr. Hatakeyama leaves a blank which is probably irreparable, at least at present, and we trust that the Government will be satisfied with nothing short of placing the very best man in the country available for the purpose, in the office which Mr. Hatakeyama filled with so much credit to himself and so much advantage to Japan.

The industrious pen of Dr. Dennys has been at work over "The Folk-lore of China with its affinities with that of the Aryan and Semitic races," and he has produced a book abounding with entertaining and interesting matter on the subject. Beginning with the superstitions connected with birth, marriage and death, he passes on to portents or omens, auguries, etc., many of the ideas concerning which held by the Chinese are extremely curious. In his fifth chapter he treats of charms, spells, amulets and divination, in which he shows that a certain form of spirit-rapping is practised among the officials and literary classes of China. Mesmerism has also its devotees among the people of the Flowery Land, and chiromancy, or divination by palmistry, is much resorted to. Passing on to and through their superstitions, in doing which he pays a just tribute to Dr. Eitel's excellent little work on *Feng-shui*, he proceeds to show the beliefs of the Chinese regarding demonology and witchcraft. Like all people who have no positive knowledge deduced from experiment and verification, the Chinese believe in demoniacal possession and the power over the in-dwelling spirit inherent in those who style themselves exorcists, and it is curious to find, says Dr. Dennys, that in those parts of China to which missionary effort has penetrated, a popular belief exists in the power of Christian exorcism. Missionaries or their converts are applied to to "cast out the devil" which is supposed to possess the patients, though there is no reason to suppose that their foreign religious instructors encourage this delusion. We remember, however, once falling in with a clergyman of the English Church who firmly believed in such possession and his own miraculous power to deal with it. Chapter IX is devoted to elves, fairies and brownies—fit reading for this time of year—though they are associated with none of the exquisite poetry with which European genius has surrounded them. Serpents, dragons and fabulous monsters next come under review, and it is curious to find that our old friend the Sea-serpent turns up among them. Dr. Dennys proceeds to give some account of the superstitions held by the Chinese regarding the powers of nature. The Man in the Moon is reputed to hold in his hands the power of predestining the marriages of mortals—in which case he is responsible for some grim combinations. The Chinese also believe that the sun is the dwelling place of mysterious beings, and that a three-legged bird of supernatural attributes is its ruling demon. The stars and planets are also identified with the dwelling-places of heroic or supernatural beings, and the belief is common that the fortunes of men are influenced by the combinations of the heavenly bodies at the time of their birth. Louis the Eleventh, if born a Chinese Emperor, would have had no trouble in finding a congenial astronomer, though whether the latter would have had the wit to bind up his own life with his master's as cleverly as Martius Galeotti did, is another question. Legends of locality and household tales are then treated, and the volume, which well deserves reading, is brought to a close by a reference to the fables and proverbial lore of the Chinese.

The following extract from the *London & China Express* bears more or less directly upon the question treated in our leading columns.

According to the papers received by the last mail from Japan, the Government of that country had it in contemplation to issue a notification, the effect of which would be to prevent the cohabitation of foreigners and Japanese for commercial purposes. We cannot, however, but hope that upon more mature consideration this scheme will be abandoned; as whether it be regarded in its political, its legal, or its commercial aspect, it is equally open to condemnation. In its political bearing, the most obvious and also the most serious objection to it is to be found in the direct tendency which it would have to widen the breach which must of necessity exist to some extent between natives and foreigners, and which it is clearly the policy both of the Japanese and of foreign nations to diminish as far as it is possible. There is nothing which tends more effectually to break down artificial barriers between different nations than trade, and it is, in fact, in this way more than any other that commerce becomes one of the great civilising forces in the world. To place artificial restrictions in the way of free commercial intercourse, or to maintain privileges of nationality is, therefore, the surest possible way to retard real progress and advancement: and we cannot but hope that upon this ground, if upon no other, the Japanese Government, which has shown itself desirous to advance to a higher scale of civilisation, will decide finally to abandon the measure proposed. In its legal aspect, the matter would be open to considerable question. Although the right of the Japanese Government to rule their own subjects as they please is beyond dispute, even this broad principle is not without limit when it is applied to matters which have also become the subject of treaty with foreign nations. The treaty as it at present stands does not forbid the combination of Japanese and foreigners for purposes of trade; and if the Japanese Government saw fit to prohibit its subjects from so combining its action would no doubt be within the scope of its powers as regards its own nationals; but such action would be a clear invasion of the privileges for trade which it has also granted to foreign nations, and as such, would be open to serious objection on the part of their Representatives. It would clearly be very undesirable to needlessly raise a point which, from the nature of our relations with Japan, there is obvious conflict of laws. In a commercial point of view also the measure would undoubtedly be of a most retrogressive character. It is contrary to all principles of sound trade to prevent combinations for business purposes among those to whom partners seem desirable; and the peculiar positions in which foreigners and Japanese are respectively placed make them in many instances mutually dependent upon one another for carrying out many enterprises. No doubt it may urged that the measure, though contrary to our principles of commerce, is still in accordance with the protective system adopted in Japan and in a great many other countries, where Free Trade has not yet been accepted. But it may fairly be rejoined that, admitting this to be the case, no such reservation was made in the treaties, and its introduction into our trading relations at the present time by a side wind is, therefore, an invasion if not of the actual letter, at least of the clear spirit of those instruments.

It is perhaps hardly necessary to point out to how wide a class of transactions a prohibition of this kind would extend. It would, were it carried out to its fullest extent, include the question possibly whether a Japanese could hold shares in a foreign Company, as by so doing he becomes a partner with his fellow shareholders. This, no doubt, would be an extreme case; but we allude to it in order to show clearly the extent which would be found in carrying out any such measure as that which has been proposed. Indeed, this is probably the strongest objection which exists against it, as, however severe penalties might be made, it is certain that means would be devised for evading it, and that the only result would be that, whereas the inducement offered, partnerships would still continue to be formed between foreigners and Japanese; but they would be formed in a surreptitious manner, and in consequence be free from the serious objections which attach to all underhanded commercial arrangements.

The art of this country has recently attracted increasing interest in Europe, where its special features and beauties have met with full and intelligent appreciation. Much as it may be wanting in certain respects, it has distinctive peculiarities and merits of its own which the world will not willingly let die, and it is no wonder that some jealousy should be shown regarding its threatened destruction in the wave of innovation on which Japan is now riding. Thus we have heard with great satisfaction of the arrival here of Mr. Dresser, who has long been attached to the Kensington Museum, and who comes to Japan on a double mission. First, he is the bearer of a present to H. M. the Mikado from the Museum, and therefore in effect from the British Government, of a collection of works of keramic art. This collection is, we have good reason to believe, one of rare and varied beauty, valued at many thousands of pounds, and we are sure it will be regarded by the illustrious personage for whose acceptance it is destined, as a welcome token of the warm interest taken in England in the progress of the country of which he is the present ruler. It will also permit the artists of this country to form very definite ideas of our own views of this special branch of art, and may present them with certain novelties of form or decoration which they may incorporate without injury into their own works. But we believe that Mr. Dresser has the further and very weighty object in view of impressing upon the decorative artists of Japan the high importance of preserving intact those distinctive and peculiar merits in Japanese art of which we have just spoken. That these are just now in danger is quite certain. The old days are passed when, at the little court of every daimio, some gifted artificer ranked as one of his welcome attendants, whose cunning hand wrought those beautiful and varied objects with which of late years we have become so familiar. The traditions which these men kept alive are gradually disappearing, the keen artistic conscience with which they worked is failing before the temptation of higher rewards to be gained by stooping to the baser exigencies of an export trade, and the spirit of the native Ghibertis and Cellinis may easily disappear before the glare of all this bewildering innovation. It is to these men that Mr. Dresser is anxious to appeal, and for this good purpose that he is here. By what means he proposes to advance his cause, we do not know. But we wish him every success, and believe that he possesses all the qualifications calculated to ensure it.

The distribution of the fund raised here by foreigners for the benefit of the sufferers by the Tokiō fire, seems to have been made on a principle which, as far as possible, has neutralized all the value of the money. If we are rightly informed, the fund amounted to about $2800, and it was equally divided among the 30,640 persons who were the actual sufferers by the calamity. Each person therefore received 9 *sen*, 6 *rin*, say the sum of 5d. Now, practically, this money might just as well have been thrown into the sea. To give a sum so ridiculously small to each person was, to all intents and purposes, useless. It would purchase a meal, or perhaps two, and that is all. Nor is this the way in which such benefactions should be administered. Contrast it, for instance, with the system pursued by those entrusted with other funds collected for the same purpose. In a report bearing the signature of the Revd. Mr. Piper, we see an altogether different plan pursued, and the results are very satisfactory. *Futons* (the substitute for our woollen blankets) and rice were distributed among the poorest and most distressed sufferers, and wherever the almoner appeared, some permanent or at all events substantial trace of his visit was left behind. It was obviously absurd to divide a sum of money among all the sufferers. The sum so apportioned could have been no appreciable benefit to thousands of them. But had the cases of the greatest poverty, exigency or distress alone been relieved, a fair sum would have been available for them, carrying with it something like durable benefit, and a lasting yet not humiliating sense of the sympathetic spirit in which it was bestowed.

A pony paper hunt will take place on New Year's Day, the meet being in the road opposite the old Legation buildings on the Bluff at 3 p.m. The course will extend from this spot to the Race Course, and has been specially selected with the object of allowing spectators a chance of viewing it at various stages, and particularly of seeing the finish, which will be near the Grand Stand.

From the "Japan Mail Daily Advertiser."

Tuesday, 26th.

The paper hunt yesterday was won by Mr. Mollison on *Cossack*, though, but for a check at the very finish which destroyed the chance of the leaders, the result would have lain between Messrs. D'Effanger and Bennett. The course was especially selected with a view of affording the numerous spectators a chance of seeing the run, and in that respect was quite successful. Though offering no very great difficulties to the riders, somehow or another every one came to grief.

The agent of the Great Northern Telegraph Company informs us that the cable between Nagasaki and Vladivostock was repaired on the 24th instant. The *H. C. Orsted* left Shanghai for this purpose on the 19th, the day the cable was broken, reached that port on the 21st, and, after coaling, left on the same day. The broken cable was grappled at 9 a.m. on the 24th instant 373 miles from Nagasaki, the repairs effected and communication restored before nightfall. As the Singapore and Penang cable is also repaired, all lines are again in working order.

A telegram from Nagoya announces that the premises of the Mitsu Bishi Co. and the telegraph office at Yokkaichi have been burnt by the rioters, who were being opposed, with some hope of success, by the police of the district assisted by the *samurai*. Another message reports that the prisoners of Miyé *ken* had broken out of the *ken* prison and greatly added to the disturbance, but that troops from the Nagoya garrison had been sent against them and had succeeded in capturing some of their ringleaders, while the great body of them had made their way towards Gifu *ken*.

From the *Hōchōsha Shimbun*.

Our editor, Mr. Arai, was summoned to the *Saibansho* on the 22nd instant for criticising the sentence passed on Mr. Nakajima, of this journal, and Mr. Nagai, of the *Yomiuri Shimbun*, for a libel on Kido, and after a preliminary examination was remanded in charge of the ward authorities.

Wednesday, 27th.

We would call attention to the fact that the departure of the M. M. Co's steamer *Tibre*, with the next French Mails, is changed from Tuesday, the 2nd January, to Wednesday, the 3rd, at daylight, in consequence of the new year holidays.

We gather further particulars from the native papers of the outbreak in Miyé *ken*. The disturbance first began on the 17th instant by about 2,500 farmers from Kumodzu and the neighbourhood rising and arming themselves as best they could. They were joined by some priests and *samurai*, and by dint of threats pressed into their ranks many of the country people who were more peaceably disposed. They made the town of Tsu their headquarters, broke open the prisons and forced the prisoners to join them, and, thus re-inforced, made a raid on all police stations, telegraph offices, schools, hospitals, etc., showing a special aversion to all buildings which betokened foreign influence or origin, which they ruthlessly set fire to. On the 20th they numbered upwards of 15,000 and advanced on Kuwana, expecting the *samurai* of that place would join them. In this they were disappointed, as the latter made an attack on them killed several and captured five or six. On the 21st the rioters proceeded to Mayegasu in Aichi *ken* (Owari) where they were opposed by some of the troops of the Nagoya garrison, who shot down some and forced the main body to retire to Kamimori-mura, where, however, their ranks were swelled by adherents from that part of the coun-

Original from UNIVERSITY OF CALIFORNIA

try. They proceeded forthwith to destroy all buildings of foreign style of construction as before. All the books and official documents in possession of the *kocho* were burnt, and the destruction seems to have been so wanton that their allies from the neighbourhood were disgusted, and not only deserted the ranks of the rioters, but attacked them and made some of their body prisoners. The troops and police arriving at this juncture the rioters were put to flight, and crossing the Kisogawa retreated towards the Gifu *ken*. Notwithstanding their numbers, it seems that they can make no stand against the troops or police with whom they come in contact. Owing to this outbreak postal communication is interrupted beyond Atsuba in the Aichi *ken*.

From the *Hôchi Shimbun*.

Shimadzu Saburo is expected at the capital shortly for the purpose of paying a visit to His Majesty the Mikado.

From the same.

The principal temple at Uyeno which was destroyed during the late civil war is to be reconstructed.

From the same.

Some disturbance on account of the land-tax is reported in Nagano *ken*.

From the *Akébono Shimbun*.

Two officials of the Department of Agriculture, accompanied by Mr. Jones, will very soon proceed to America for the purpose of purchasing cattle, agricultural books, etc., and will visit China on their return.

From the same.

Yoshida Kiyonari, the Japanese Minister at Washington, and his secretary Yoshida Jiro will return to Japan about the 11th of January next.

From the *Chôya Shimbun*.

Permission was given by the Cabinet on Friday last to the Army Department to construct a fortress at Kannonsaki.

From the same.

As there are rumours of a disturbance in Shônai, the former *daimio* of that place has proceeded there from Tôkiô.

From the *Mainichi Shimbun*.

We hear that some disturbance has arisen in Shidzuoka *ken* (Suruga).

From the same.

A silver mine has been discovered at Asamayama in the province of Settsu.

From the *Nichi Nichi Shimbun*.

His Majesty the Mikado will visit the Yokohama *Saibansho* on his way to Kiôto next January, and examine the mode of procedure in criminal and civil cases in that Court.

From the same.

His Majesty the Mikado will proceed in the *Taka-o Maru* next January to Osaka *en route* for Kiôto, and will be accompanied by the *Rinjô*, *Kasuga*, and *Seiki-Kan*.

Thursday, 28th.

General Saigo, Tanaka, and the other Japanese Commissioners at the Philadelphia Exhibition, returned in the *City of Tokio*.

From the *Hôchi Shimbun*.

Ten rioters were captured in Gifu *ken* (Mino) on the 23rd instant, and there seems to be an end to the late disturbance.

A report has come from Osaka that the farmers at Gojo, in the province of Yamato, are showing signs of becoming unruly.

From the same.

About 600 farmers have assembled together in the Nagara district of the province of Kadzusa, complaining of the land-tax, and a disturbance is apprehended.

From the *Chôya Shimbun*.

A newspaper will be published by Messrs. Maruya & Co. every Monday, commencing from the begining of next year, and will be called the *Goshiu Kinji*.

From the same.

The running of the Mitsu Bishi Co.'s steamer to Yokkaichi has been resumed, as favourable news of the suppression of the riot there has been received.

From the *Akébono Shimbun*.

At 2 a.m. on the 26th instant a fire broke out at Nagasaki, by which 40 houses were destroyed.

From the same.

The Hiroshima *Kencho* was destroyed by fire on the 25th instant, at 8.30 p.m.

Friday, 29th.

The P. & O. steamer *Sunda* made the run up from Hongkong in 6 days 21 hours. She only left that port on the 21st instant at 4 p.m., as the *Geelong*, through having met with continuous heavy weather from Singapore to Hongkong, only arrived at the latter port at 4 p.m. on the 20th instant. The telegraphic news brought by the *Sunda* has been anticipated by the *City of Tokio*.

From the *Hôchi Shimbun*.

The farmers in the neighbourhood of Nara are showing signs of discontent, which the Governor of Sakai *ken* is about to suppress with the aid of troops from the Osaka garrison, as some apprehension is felt lest these farmers should join the rioters of Miyé *ken*.

From the same.

On the 27th instant His Majesty the Mikado presented a decoration of the first class to the Russian Minister.

From the same.

Reports have reached Tôkiô to the effect that the farmers of Kôchi *ken* (Tosa and Awa) have commenced to raise a disturbance on account of the new land-tax.

From the same.

Mr. Sameshima, the Vice-Minister of Foreign Affairs, gave wedding parties on the 25th and 26th, at which the Foreign Ministers were present.

From the *Nichi Nichi Shimbun*.

It is rumoured that another insurrection is threatened in Kumamoto, but the truth of the rumour is doubtful.

From the *Chôya Shimbun*.

It was thought that the discontent in the Kagoshima *ken* had ceased, but we now hear that such is not the case. Many of the officials have resigned their posts, and there are others who wish to follow this example. It is reported, that on account of the unsatisfactory state of affairs in the *ken*, Saigo, Kirine, and others of influence, will visit the capital in January next.

From the same.

The general drill of the firemen of Tôkiô will be held at Nishimaru-shita, on the 4th of January.

From the *Akébono Shimbun*.

Mr. Otowa, the editor of the *Aichi Shimbun*, was sentenced to 10 days imprisonment and 15 *yen* fine on the 23rd instant, for a violation of the Libel-laws.

Saturday, 30th.

From to-day there will be no issue of native newspapers until the 4th proximo.

From the *Chôya Shimbun*.

A policeman was recently murdered in Kumamoto *ken*, and reports are said to have arrived from Saga that there are signs of disaffection there, so some trouble is apprehended in consequence.

From the same.

Some disturbance having arisen in the province of Tajima, a police force was despatched from Kobe to that place on the 24th instant.

From the *Nichi Nichi Shimbun*.

The new building for the *Naimusho*, which was completed some short time ago, cost 40,000 *yen*, and that for the Paper Money Department 120,000 *yen*.

The *Charybdis* is towing the *Lapwing* from the place of her disaster. Both vessels may be expected here by the 20th instant, when the *Lapwing* will refit.—*Shanghai Courier*.

We hear that there are fresh rumours afloat in the North respecting the advanced guard of Tso's army. It is said that this detachment, which, as our readers know, consists of Manchus, under a Manchu general, has suffered some reverses—somewhere this side of the Hindoo Koosh; but as we cannot verify the spot from this rather vague description, by several degrees of latitude and many meridians of longitude, we must wait for fuller information. Something more tangible is sure to leak out before long. The last definite advices which reached us about the Manchu army were to the effect that it had succeeded in recapturing Urumtsi: and that was many weeks ago.—*Shanghai Courier*

A brief statement of the present position of the Margary memorial fund may be of interest to subscribers. Subscriptions deposited in the Hongkong and Shanghai Bank amount to about $1,200, besides which there are about $340 in course of collection. Friends in England have been communicated with, both with reference to subscriptions and designs for a suitable memorial. At the Committee meeting on Saturday it was decided to wait until answers could be received before calling a meeting at which the Committee could report progress. The Committee have been favoured with several designs, some of great merit, and beg to express their thanks to those gentlemen who have spent so much time in elaborating them. The plans will be laid before a general meeting of subscribers in due course.—*Shanghai Courier*.

There has been a little excitement in the money market this afternoon, as sycee is getting daily scarcer and about a lakh of taels is being sent up the river to-night, leaving a balance of something under a million taels for the circulation of the place, of which seven lakhs are supposed to be in the coffers of foreign banks, while the rest are held by the natives. Considering that there is at present a stock of 22,000 bales of silk on the market, this amount is totally inadequate for carrying on business even on ordinary terms. Interest amongst the Chinese has gone up to 6 mace per diem or about 18 per cent per annum, and those who are well up in the money market predict dear money until after China New Year, and even then a fall is possible only if relief comes from England in the shape of her silver.—*Shanghai Courier* (Dec. 15th).

THE STATE OF THE COUNTRY.

IT is impossible to congratulate the Government upon the condition in which the close of the year finds this country. A rising, which, if more successful at first, might have taken the form of a general rebellion, has only just been suppressed in the south-western provinces, and has been followed by very general and serious riots among the agricultural classes, due to the pressure of excessive taxation, or the mode in which the taxes are levied. The sympathies of all impartial observers will certainly have been with the Government in the various affairs in the south-west, which had their origin in ambitions, projects or views entirely antagonistic to the welfare of the country at large. An obstinate conservatism of the most narrow kind animated the *Jimpu* party, Mayebara's conduct was prompted by personal disappointment and envy, and those formed the majority of his adherents unquestionably acted on behalf of themselves or their class, forgetful of the wider interests which a true patriotism would have first consulted and endeavoured to promote. But, in the riots which have broken out among the farmers, the sympathies of most observers will be against the Government. As a body of men they are peaceable, industrious, of necessity frugal, and very easily kept in control. They are perhaps more heavily taxed than any similar body in the world, and they and their predecessors have borne their hard yoke for centuries with cheerful and exemplary patience. But they have become infuriated by the burden laid on them, and refuse any longer to carry it, at least as at present adjusted. A narrow calculation, based on the most severely enforced frugality, shows them that compliance with the demands of the Government will leave them before next harvest without food for themselves or their families, or even the seed necessary to ensure that harvest, and rather than face such a prospect they have risen against the authority of the state. The residences of the officials have been attacked and burned in several of the provincial districts, incendiary fires mark the localities and illustrate the intensity of the greatest discontent and disaffection, the whole country is disquieted and the loyalty of the people rudely shaken. All this involves expense, which is bad, and may involve bloodshed, which is worse. Troops and police have to be moved to the disaffected districts and can hardly avoid coming into serious collision with the rioters, whose thoughtless though natural anger may lead to the death of some, and impose burdens on all to repair the losses caused by their acts.

The disturbances seem to have had their origin in the change recently made in the mode of levying the taxes, which, formerly paid in kind, are now exacted in a fixed sum of money, irrespective of the abundance or scantiness of the harvest or the price of grain. The change is one which it was obviously desirable to make—desirable for the Government, which could then calculate to a nicety the income derivable from the land-tax; desirable, at least theoretically, for the farmer, who then knew exactly the extent of the demand made on him and could so adjust his resources as to meet it with the least distress to himself. But a change of this nature, however desirable in itself, may easily be made too early in the history of a nation, and thus inflict great hardship on the people and cause much embarrassment to the Government. For what happens in a country like this when the taxes are thus levied? Being due on a certain day, or within some given period, the farmers are forced to sell their grain in anticipation of the demands of the tax-gatherer, and this causes a forced and unnatural depression of the market by

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

which they suffer greatly. The quantity of grain reserved for the payment of the tax does not suffice to provide the sum due to the Government, and the only means by which this can be raised is by drawing on the reserve absolutely requisite for the support of the farmer and his family before the next autumn. This acts badly in every way. The depression of the grain market causes loss to the farmer, and waste to the country. It is a well ascertained fact that the consumption of the first necessaries of life obeys the same law as that of articles less absolutely requisite, though, of course, within far more restricted limits. If silk or woollens become very dear, the consumption of them decreases proportionately, and if bread is very cheap, men eat more of it, and households are less careful of it, than when it is dear.

Two adjuncts are very necessary to enable a Government to collect its taxes in money instead of in kind, viz, roads and banking facilities, and in both these this country is lamentably and equally deficient. The farmer has no facilities for sending his produce beyond the town in his immediate vicinity to which all his neighbours are sending their own, and even if he could consign it to some more distant place, to wait there until the market had recovered from its enforced depression, he cannot raise enough money on it to enable him to carry through the operation. In well governed countries, where wealth has accumulated under even a moderately good system of taxation and a fairly active external trade, money is easily found which its possessors are more ready to employ on banking operations than in any other way. But this country possesses no accumulated wealth worth speaking of. Fertile and well cultivated as it is, the number of idle men quartered upon it for centuries has kept it in a hand-to-mouth condition in which no stores of husbanded wealth could be garnered. Although the system of IYEYASU gave Japan a greater measure of peace than it had ever previously enjoyed, and thus prevented the waste which constant internal warfare entails on a country, he planted the privileged classes so firmly on the shoulders of the people, and fastened them so tightly there by the haughtiness he taught them to cultivate, that they have impoverished the nation grievously; and it is for this reason that the measure which freed the country from their military domination, and the subsequent measure which has put a term to their idleness and spoliation—for this is what the maintenance of their order practically involved—have been hailed with satisfaction by all who desire the welfare of Japan and the extension of its foreign relations.

In default of these important adjuncts to a better system of taxation, there can be little doubt that the scheme at present employed is premature, or must in some way be modified to meet the views and difficulties of the farmers. Without attaching any particular value to the plan suggested a fortnight ago in these columns, we think that some such means might be resorted to in order to meet these difficulties. Nothing is so bad for a Government as to have disturbances arising among the people under the sense that its policy translates itself into inevitable hardship and starvation. Of the science of taxation they know nothing, and for it they care nothing; but the idea of approaching want, caused, as they imagine, by a new-fangled mode of taxing them, which means to them fresh oppression, converts them into wild beasts.

But these riots teach one further lesson, which must be got by heart if this country is to be prosperous, and to realize the hopes of its friends and the aspirations of the more advanced among its own people. The sum of its expenditure is too great for its powers. The back breaks under an excessive, if not intolerable, burden. Production is not extended because there is no annual increase of capital. Under false views of the effects of trade upon the economical condition of a country, the Japanese have regarded it with jealousy, rather than hailed it with satisfaction. Under the apprehension that if not controlled it would ruin them, they have sought to control it unduly, and in doing so have certainly retarded its progress. And under an equally misleading view of the results which would spring from the introduction of foreign skill and capital into the country, they have sought to keep at arms' length the very men who possess these, instead of utilizing them as guides and invaluable assistants. The effort at present sustained with difficulty, and amid such troubles as those of which we now write, cannot be sustained much longer. Expenditure must be decreased, and production must be increased. Without the first, no accumulating reserve of capital can be hoped for. Without the second, the country cannot augment its exchangeable commodities, and, in default of this, nothing but a rudimentary and stationary civilization is possible.

SPIRIT OF THE JAPANESE PRESS.

THE ADMINISTRATION OF THE PRESS-LAWS.

("Chôya Shimbun," 22nd December.)

As our Government has stated that that it did not hold itself bound to answer questions regarding the laws which it enacts, we do not intend to ask it to dispel certain doubts which we now place before the public. We refer them to the public alone, and trust that an explanation may be given from that quarter, because we might lay ourselves open to punishment were we to ask in the former direction for any explanations regarding these laws.

The Government has been paying great attention to the improvement of education, the reform of the law, etc., in the hope that we may be placed upon an equal footing with foreign powers. Upon the wisdom of the laws and their administration it is not fitting that we should have any doubts, but as we have not the intellect of a sage, events do occur from time to time which are absolutely incomprehensible to us. We therefore lay our doubts before the public in the hope that they may be dispelled by our men of learning.

Yet our misgivings regarding this question are so numerous that it would be impossible to find room for them all in our columns. We shall therefore confine ourselves to questions affecting the Press, and adduce several instances which have aroused these misgivings.

The editors and writers for the newspapers who have been punished since the beginning of this year for infractions of the Press-laws amount to about seventy. We do not express any doubts regarding the justice of the punishments awarded to them, but as the numbers of cases is so great and the laws are so minute, our doubts may arise from the want of a thorough understanding of the cases.

Mr. Sawada, the editor of this journal, was punished with imprisonment for one year for having violated article XIII of the Press-laws by publishing the letter of a correspondent, Mr. Kusama, who was found guilty of an infraction of article XII of the Press-laws. How can this be right? Can a principal and an accomplice be justly deemed to have violated different articles of the law? If justice was done in either one of the cases, injustice must have been done in the other.

Messrs. Matoki and Yano were both found guilty of treason on the 4th instant for remarks made in Nos. 58 & 59 of the *Saiyu Shimbun*, and were sentenced respectively to a year and half a year of a imprisonment. Mr. Yano in his article said this:—"When the nation and dynasty is in danger," says a Chinese sage, "the Ruler must be removed and replaced by another. "Thus there can be no great wrong in changing the Government under similar circumstances." Mr. Motoki said:—"Should a bad Emperor or a corrupt Minister abuse his governing power, he should be destroyed." The wording of both these extracts had a direct reference to our rulers.

But Mr. Kato, of the same journal, was punished on the 20th January last with three years imprisonment for having violated

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Article XIII. of the Press laws by saying in one of his articles: "When nothing is left that the people can do, they must act as Patrick Henry did," etc. There is no great difference between the first and second cases. Why, then, should the latter, who made no direct reference to the rulers, be punished twice as heavily as the former? Again, the former were found guilty of treason, while the latter was only found convicted of an offence against the Press laws.

Mr. Okubo, the editor of this journal, was, on the 18th November last, found guilty of an offence against Article XIV. of the Press laws, and sentenced to three months imprisonment. When summoned to the court, he informed the judge that he desired to make a statement regarding the article on which he had been convicted. The judge told him that the court was no place in which to make explanations, and that if he, Okubo, was dissatisfied with the judgment, he could appeal to the *Daishin In*, and there make any explanation he chose. Thus Mr. Okubo had to go to punishment without making a word of explanation.

It seems now that as a law was enacted by the Government that confession was no longer necessary before a judgment is pronounced, the judges are of opinion that they need no longer hear the defence of an accused person in court.

Writing is now taken as proof in evidence, yet the judges can hardly be so settled as to divine the exact feeling under which articles are written, and the case of the editor of the *Nisshin Shimbun* is quite sufficient to prove that the justice of the *Daishin In* is not to be wholly depended upon.

Mr. Nakashima, of the *Hochi Shimbun*, was found guilty on the 7th instant of a violation of articles I and IV of the Law of Libel, and was sentenced to imprisonment for three months. Previously to being summoned into court, he had made a correction of the incriminated statement, but this was held to be unavailing, and punishment was awarded in spite of this fact.

This case is exceedingly hard, for the newspapers have to make so many statements daily that it is impossible for them to guarantee the trustworthiness of every one of them, and for this reason it is not unfrequent that we receive corrections of errors from the public departments or private persons. But if these corrections do not enable us to escape punishment, what is the use of publishing them? They may prevent others from being misled, but they do not protect us.

These are four out of the numerous matters which are obscure to us. This may be due to our ignorance, but the fact remains the same, and thus we trust that our doubts may be dispelled by our men of learning.

At the same time let it not be thought that we have written the above in order to screen those who have trespassed against the Government. We have done so in order that we may ourselves understand the laws more perfectly, and thus escape all charges of criminality.

Further Arguments for Representative Institutions.

("Chomi Shimbun," 24th December.)

What is the duty of the Government? It is to keep the people in a state of tranquillity in order that each man may work peacefully at his calling under the ample protection of the law. Men are naturally peaceful, and none think that taking to arms and opposing the authority of the Government is a good thing. If the acts of the Government are in accordance with the will of the people, we may of course expect internal peace. But when any of the people be it even only one man commences to show dissatisfaction at the doings of the Government, or commits any act of violence against it however reckless such act may be it is a warning to the Government that its officials should be more careful in the future treatment of the people. Now, at the present day, men have a high respect for the officials, and honour the laws under the conviction that it is a crime to violate them.

But, under certain circumstances, these quiet men break out at large. Arming themselves with rude weapons, not caring whether the crops in their fields are ruined, their families destitute of food or for the severe punishments that await themselves, they attack the Government offices, and even shed blood. They may of course have been incited to these acts by men who love turmoils, yet, at all events, there must be something wrong to lead them to such acts as these, which betoken so great a change in the very nature of man.

Should there be any official who would say that all these acts of violence arise from the stupidity of the people, who have not enough sense to obey the excellent laws issued by the Government, and then send out police or troops of the garrison to suppress them, these officials cannot be said to be discharging their duty in such a manner as is fitting.

On glancing at the present state of the country we must confess that it is grave, and that the greatest care must be taken. Only a month or two ago we had the Wakayama *ken* affair. When this was tranquillized the Ibaraki *ken* affair broke out, and before this was thoroughly settled we had this disturbance in Miye *ken*. Why should these troubles so frequently take place? Is it because the people are so ignorant, and because they are not yet fit to have the civilized laws of the western nations enforced upon them? Or have they been pressed by starvation to such deeds of violence, at the risk of their precious lives? Be it either one or the other, they are our brethren, and is it not a deplorable fact that so many of such acts of violence should have taken place in such a short space of time?

Only nine years have passed since the Restoration, but many sad events of this nature have arisen from the spirit of discontent. Such risings as those of Saga and Kumamoto are only among the *samurai* and they are here excepted. Since the establishment of the *ken* no less than ten of these risings among the farmers have taken place. Some difference must surely exist between the will of the Government and the wishes of the people or these events would not be so frequent.

Shortly after the Restoration, when the reformed laws were issued, dissatisfaction arose in various parts of the country. In July 1871, when the *Han* were abolished and the *ken* established, there were many farmers in the different parts of the country who opposed their lords' (*Daimio's*) going to reside in the capital, but they were suppressed without the aid of the Central Government.

The next disturbance was the one in Owake *ken* (Bungo). The farmers said that they were desirous of having their old lords back again, and the new officials of the Government sent away from their province. But this riot was suppressed by the *samurai* and the troops of the garrison, and finally ended in two of the farmers being beheaded, one hung, and twenty seven thousand sentenced to lighter punishments, some fined, and others sentenced to imprisonment with or without hard labour.

The next was in Tsuruga *ken* (Yetchizen) when many of the rioters were afterwards punished. The next took place in Hojō *ken* (Mimasaka). This insurrection arose from a misunderstanding by the farmers of a notification issued by the Government and at the end of it fifteen farmers were sentenced to capital punishment, while others were more lightly dealt with. Then these insurrections were followed by those of Fukuoka *ken* (Chikuzen), Tottori *ken* (Inaba), Shimane *ken* (Idzumo), Mieto *ken* (Awa), Tamba in Kioto *Fu*, Bingo in Hiroshima *ken*, in the Iki Island in Nagasaki *ken*, and at Amakusa in the province of Higo. Thousands were involved in the smaller, while tens of thousands were involved in the larger ones some from the poll tax affair, others from drought, or being not pleased with the new mode of Government. Those of Fukuoka and the Mieto *ken* were the greatest. Of the former when the rising was suppressed four men were punished capitally, while sixty-four thousand were sentenced to punishments of lighter order of various degrees. Of the latter, five were beheaded or hung, and sixteen thousand others were sentenced to various punishments. It is a fact to be greatly deplored that men with parents, wives and children, should become so infuriated and commit acts for which they finally have their heads severed from their bodies.

The Poll tax affair arose from a misunderstanding on the part of the people and cannot very well be called a fault of the officials. But at the same time had the officials treated the people in such manner that they put their trust in them, such misunderstandings would in all probability not have led to such results. And this is the point to which the district officials must pay their greatest attention.

Three years have passed since the above recorded events occurred, and though we have since had some *samurai* causing disturbance, yet these arose from their selfish wills, for they were only consulting their own interests. Thus it is not for the *samurai* that we lament, it is for the farmers. The insurrection we have above mentioned must have arisen from some difference existing between the will of the Government and that of the people. And again we have this year had the Wakayama, Ibaraki and finally this Miye *ken* affair.

Our Government is undoubtedly wise and our people are no less obedient, why then do we not enjoy peace? There must, as we have repeatedly said, exist some difference between the will of the Government and that of the people. There surely

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is some way in which the will of each can be made known to the other. And it is not a very difficult thing to get at this means. Then why should we not commence the work immediately?

A DISTINCTION WITHOUT A DIFFERENCE.

("*Nichi Nichi Shimbun*," 18*th Dec.*)

It is said by some that the *samurai* of the Kagoshima *ken* have been specially favoured by the issue of the Notification No. 152 on the 11th instant, but although it may prove to be an advantage to the Satsuma men, it will not benefit them alone.

When the family of Shimadzu had still in its possession the provinces of Satsuma, Osumi and Hiuga, its retainers owned several estates in addition to their hereditary pensions, and these estates, which had long lain waste, were converted into productive lands. But they had not been derived from the former lords of these retainers.

Those *samurai* who lived in the neighbourhood of these estates, cultivated them themselves, while those who lived away from them leased them to farmers of whose produce they received a certain portion as rent. The *samurai* held the title-deeds for these lands, which were bought and sold among themselves, the title deeds on these occasions recording the transfer. Thus these *samurai* had the privilege of other incomes besides those received from their lords.

When the domains of the *daimios* were converted into *han*, the *Hancho*, in the interests of the *samurai*, took possession of these lands, and gave in exchange for them annually the amount of rent formerly derived from them, the right to the income being still within the power of sale or purchase.

But as these incomes differed somewhat from the ordinary incomes of the *samurai*, the *Kenrei* of the Kagoshima *ken* came to the capital recently, and represented to the Government that they should be treated in a special manner. And it is thus that the *samurai* who enjoy these special incomes have been promised, in exchange for them, next year, the amount of ten years' purchase of them in Government bonds bearing ten per cent interest.

We do not understand that this act of the Government is any special mark of favour to the men of the Kagoshima *ken*, for the notification in question does not say that its exclusive bearing is upon the Kagoshima *shizoku*. On the contrary, it refers to "the incomes which were permitted to be bought and sold during the *Hancho*," and it is clear that this does not apply exclusively to those possessed by the *samurai* of the Kogoshima *ken*, but to all incomes bought and sold since the time of the formation of the *han*. But as the Satsuma men alone had the privilege of buying and selling these incomes, they enjoy a special advantage from the notification. It is, however, the privilege which makes the notification valuable to the Kagoshima men and which lies at the root of their advantages.

Why they should receive ten years' income from these lands, in bonds bearing ten per cent, is more then we can at present say.

But, apart from this, the measure is not one passed specially for the benefit of the Satsuma men, and it must not be inferred that they alone have been benefited by Notification No. 152.

Correspondence.

TOKIO FU *versus* J. M. BATCHELDER.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—I have read with the care that a matter of so much interest demands, all the newspaper comments which have come under my observation, upon the subject which heads this communication, but have refrained from stating my views, until all who were intent on tearing to pieces the judgment of the Court should have exhausted themselves or their readers.

Criticising judicial proceedings is an art which, with much propriety and safety to the public, might be confined to those having some acquaintance with law and the rules of evidence and construction, but too often our newspaper critics are not possessed of these qualifications. Anything that tends to diminish or destroy the confidence of the public in the wisdom, careful discretion and integrity of our Courts must be considered a calamity, and therefore any writer undertaking to call in question an important judgment, should be very sure that a serious error has been committed and that he is perfectly able to point it out and correct it.

The opinion and judgment of the Court in the cause now under consideration has been published *in extenso*, and it is therefore needless to state the case at any length.

The Japanese Government by its representative the Tokio *Fu*, asked the U. S. Consul General to compel the defendant, a citizen of the United States, to pay into its hands a considerable sum of money, as rental of certain lands held by him in Yedo, according to the terms of certain leases produced in court.

The defendant claimed that the lands in question were rented to him subject to the provisions of certain conventions made between the Japanese Government and the Foreign Ministers in Japan.

The Court became satisfied from the evidence that the position of defendant was correct, and that it would be a gross violation of equity to enforce the plaintiff's claim, and the case was dismissed.

The criticisms upon the decision are in varied terms from grave to gay, but all appear to be based upon the statement boldly made by the *Herald* that the leases contain no reference whatever to the conventions or any of them, and therefore the provisions relied upon by the defendant are not entitled to the slightest consideration and the Court erred prodigiously in taking notice of them. And for this discovery, this clear exposition of the error committed by the Court, the *Herald* gets upon the very top of its own peculiar little hill and crows most lustily. According to this *dictum* nothing unless mentioned in the lease can be considered by the Court. If the Court be not referred to in the lease the Court itself has no jurisdiction; if the laws which are to govern the interpretation or enforcement of the lease are not set forth, there are no laws to be relied upon for the purpose; if it be not provided that the rent may be collected by an action in Court no such action will lie; if it is not mentioned in the lease that the Japanese Government shall make roads and drains, we must be content without them; if the provisions of a solemn convention which made the leases possible and upon which they are founded are not bodily incorporated in the leases, such provisions are void and of no effect. Did Bunsby ever announce more self-evident propositions, conclusions more full of wisdom, learning and logic, whose truth lay so unmistakably in the application?

And yet is it not the duty of a Court to take judicial notice of certain things whether mentioned in the papers before it or not? I have always understood that a Court was bound to consider the provisions of treaties or conventions bearing upon the case; of the existence of Governments; of the provisions of law.

Another announcement is made by this learned critic which he claims as a legal axiom, viz: "the defendant "was not a party to the conventions" and therefore he has "no voice in the interpretation." Shades of Blackstone and Kent! Was ever the mystery of law thus elucidated?

"The conventions," says the critic, "form a covenant "which is binding upon the defendant as a resident citizen "of a Treaty Power," but whenever the provisions of this covenant in the least favor him or confer upon him a right or privilege, he may not set such provisions up in his defence.

Well may the *Nippon Standard* say "that the *Herald* "does not in any wise elucidate the judgment or show any "cause for pronouncing for or against it."

The learned Edi or, however, of this last named journal, who I am informed is a lawyer, proceeds to demolish the judgment after his own fashion and with no little display of legal technology.

According to this writer, the Court has so jumbled up the terms "covenant" and "condition" that he (the reviewer) "cannot undertake to separate and distinguish "them."

"Condition," according to the Books, is "a clause in a "contract or agreement which has for its object to suspend, "to rescind or to modify the principal obligation, or in "case of a will to suspend, revoke or modify the devise "or bequest. *It is in fact in many cases an agreement, "and a sufficient foundation as an agreement in writing "for a bill in equity.*" And again: "In a less extended "acceptation, but in a true sense, a condition is a future "and uncertain event, on the existence or non-existence "of which is made to depend either the accomplishment,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"the modification or the revision of an obligation or tes-
"tamentary disposition."

A "covenant" in its most general signification "means
"any kind of promise or contract whether it be
"made in writing or by parol." In its technical sense, however, it is "an agreement between two
"or more persons, entered into in writing and under
"seal whereby either party stipulates for the truth of
"certain facts or promises to perform or give something
"to the other or to abstain from the performance of cer-
"tain things."

The duty which the Japanese Government has undertaken to perform in reference to the foreign settlement in Yedo, it strikes me, may be described by the use of either or both of these terms.

By the decrees and customs of the Japanese Government, foreigners could not reside anywhere within the limits of the Empire. By certain Treaties and Conventions, however, entered into with foreign nations or their representatives, these laws and customs have been so far modified that citizens and subjects of these Treaty Powers may reside within certain limits marked and defined in these conventions. Outside of these boundaries the prohibition remains.

Says the critic, "A condition may be implied by law, as
"for instance, if at any time prior to these conventions it
"had been settled by treaty or arrangement that foreigners
"could only reside and hold places of business on the for-
"eign settlements, the matter to be laid out, &c., then the
"condition would be implied and it would not be necessary
"to insert an express one in the lease." He thinks here, it will be observed, from his learned brother of the *Herald*, who maintains that nothing—not even the existence of the Government itself may be noticed by the Court unless expressly set forth in the leases. But, continues the *Standard*: "Foreigners of all Treaty Powers, by the
"Convention of 1867, had the right to have houses for the
"purposes of trade without the boundaries of the foreign
"settlement, and that there is nothing therein contained
"whereby the Government would be restricted from an
"extension of such right suitable to its convenience."

Will it be believed, after reading this, that the very first words of the convention of 1867 are as follows: "Within
"the limits colored red in the annexed plan Foreigners
"&c., may have houses and reside for purposes of trade."
What is the meaning of the word "limits"? Is it not clearly understood to be the boundaries of the space thus marked upon the map? And what is the plain legal signification of the permission here given "may hire, &c.," if not that without the limits therein defined Foreigners may *not hire* houses and may not reside? And so in the convention of 1870: "The limits within which Foreigners
"may hire houses are shewn by the red line on the an-
"nexed plan." And again, "it is now agreed that the land
"within the blue line shewn in the annexed plan shall be
"leased by the Japanese Government to Foreigners." And what becomes of the right of the Japanese Government to extend these limits indefinitely at its pleasure in view of the following provision in the same convention: "When all the ground within the blue line shall have
"been occupied by Foreigners the settlement shall be ex-
"tended to the Canal marked D.D.D. on the annexed
"plan."

A Government in the exercise of its sovereign power may do very nearly as it likes to its own citizens or subjects within its own domain, but at the same time it must see to it, that all Treaties and Conventions are recognized as a portion of the supreme law of the land, and that all rights and privileges guaranteed to aliens by such Treaties and Conventions are secured to them.

A. B. hires a lot "within the limits" of the Foreign Concession of Yedo as marked out by a solemn convention between the Japanese Government and the Government of the country of which he is a citizen or subject, believing from the terms of that convention that his neighbors C. D. and E. F., if they come to reside in Yedo at all, *must also reside* "within such limits," and therefore they are to pay for the privilege as much as he does, and that by virtue of such residence his lots are to be of some value. But he soon perceives that these neighbors, and hundreds of others, are permitted to utterly ignore the provisions of the convention, and under the thin guise of Japanese employées, and in fact on their own account when not in the service of the Government or of Japanese subjects, are hiring places in more valuable portions of Yedo at merely nominal prices, while the only privilege he possesses is that of paying the rent, stipulated in his lease, for a barren waste.

Why the Japanese Government should be permitted thus with impunity to violate their obligations; why the enormous rental provided for in the convention of 1870 for lots in the Foreign settlement at Yedo, some three times greater than in other ports, should be exacted, while the other provisions of the convention are ignored, I have seen nothing whatever that can be dignified by the name of a reason.

Thus far I have spoken of the leases, as if the bald statement of the *Herald* was correct, that they made no mention of the conventions. But no one can glance at either of the leases without seeing that the statement is altogether erroneous. They are all uniform and contain three conditions, two of which in clear language refer to the convention of 1870. The first, providing for the extravagant rental of 37½ cents per *tsubo*, ends as follows: "As
"provided by article III of the arrangement concluded
"between the Japanese Government and the Foreign
"Representatives on the 4th day of May, 1870." And the 2nd condition providing for an additional tax for a police force, reads: "In the manner provided
"by Article VI of the aforesaid arrangement." It will not, I apprehend, be claimed by any of the apologists and advocates of the Japanese Government, that it (the Government) has the exceptional right of selecting from a convention or other instrument, such portions only as seem to bear in its favor, and rejecting the balance. The leases do, in set terms, as I have shown, refer to and rely upon certain provisions of the arrangement of 1870. If, therefore, it was necessary to the due consideration of said arrangement and every part of it, that it should be mentioned in the leases, the Court in the cause before it was not only justified, but compelled to examine and be governed by its provisions.

But now what are these leases of which so much is said; these dread and sacred writings under seal, so binding, so final, that like the Revelations they can neither be added to nor taken from in the slightest degree, without the anathemas of the learned critics of the press?

Will it be credited by the numerous readers who it is the boast of the *Herald* experienced a change of mind under its cogent reasonings, that these mysterious and all-powerful instruments are neither more nor less than roughly printed forms, with names and amounts filled in in ink and signed by a Japanese official of the Tōkiō *Fu*? The defendant has never signed them at all, neither is his seal anywhere observed upon the documents. What then becomes of all the display of legal learning about instruments under seal that cannot be assailed in the slightest particular? This declaration in writing by the Tōkiō *Fu* is all well enough so far as it goes, but it cannot impose upon the defendant any obligation not expressly provided for in the conventions referred to, and therefore said conventions are the only mutually binding contracts subsisting between the Japanese Government and the defendant.

That the Government did agree that all foreigners who should come to do business or reside at Yedo should reside "within the limits" defined by the "arrangements of
"1870," the Court justly found from the evidence, and that its duty in that regard towards the renters in Tsukidji had been violated, and I unhesitatingly say that a material departure by General van Buren from the judgment rendered by him would have been a grave miscarriage of justice. His opinion is clear, logical and equitable, and the only one a man learned in the law could have honestly given.

Before concluding it may not be amiss to advise the *Herald*, that however great its influence over the Press and people in Japan, as boasted in its issue of the 19th inst., it is not sufficient to reverse the judgment of a Court. Fortunately for all parties, the judgment in question is reviewable, if at all, before a more competent tribunal. Until thus reviewed and set aside it remains in full force and effect, and the self-sufficient extacy of the

Herald may be liable to serious chills before that good time.

A gentleman in England, not long since, demonstrated by logic and illustration to his own complete satisfaction, that the world was flat—flat as a pancake, or the *Herald*, or any other thing that is "stale, flat and unprofitable," but yet the "big ball" continues to turn upon its axis despite the "words of learned length and thundering sound."

* * *

Yokohama, December 28, 1876.

THE RECENT FIRE AT TÔKIÔ.

To the Editor of the "Japan Weekly Mail."

Tôkiô, December 27th, 1876.

Dear Sir.—You will confer a favor upon many of your readers by publishing the following report of the manner in which relief has been distributed to many families and individuals plunged into the greatest distress by the late disastrous conflagration in Tôkiô. The committee, who make this report through their chairman, deserve the warmest thanks of the whole community, not only for the wisdom and efficiency of the plan which they devised and so successfully carried out in executing the difficult task which they were requested to perform, but also for the personal devotion of many days of their valuable time to this work of charity. It is proper to add, that from first to last the mayors of the devastated wards gave the committee every assistance in their power, more especially by giving information of the more needy cases not otherwise provided for; and that many of the donors to the fund were at the same time contributors to the funds distributed through the agency of the Tôkiô *Fu*, having been assured that relief would be conveyed only to the most necessitous.

ONE OF THE CONTRIBUTORS.

REPORT.

The dreadful and devastating fire in this city which broke out on the night of the 29th of last month, has called forth a good deal of practical sympathy and charity from foreigners both in Yokohama and Tokio. A subscription list was promptly opened in Yokohama at the *Japan Herald* office, and liberal sums were given to the sufferers through that channel. Much good also has been done in a private way. The Right Rev. Bishop Williams, the Rev. David Thompson and myself were requested to become a committee for the distribution of various sums sent to us, amounting in all to *yen* 465.24.

We have disposed of this sum in the following manner. The really needy families were visited and examined, when tickets were given to those who were deemed most deserving of aid. The receivers of these tickets were requested to come into the Tsukiji, where the charity was dispensed.

Altogether 233 families, numbering 870 persons, have been relieved. To 226 families, 847 persons, ten days rice was given. Besides the ten days rice, 184 of the 226 families received a *futon* each. To seven families was given a *futon* each and no rice. Only 81 families received money in addition to the rice or a *futon*; and in these cases we were guided by the presence of old age, sickness or widows in the families. Thus, only one ninth of the sum entrusted to us was given in the shape of money. It will at once be observed that, striking an average of the several gifts, each family has received the value of two *yen*. We also gave away several articles of clothing sent to us by the Rev. A. C. Shaw. Our thanks are due to three Japanese young man who rendered us much assistance in the performance of this work. In conclusion we can only say that it has been a pleasant duty to gladden the hearts of 870 persons with the money forwarded to us, and it will be additional pleasure if the plan we adopted meets with the approval of the several donors.

On behalf of the Committee,

JOHN PIPER.

December 22nd, 1876.

Law Report.

IN H. B. M.'s COURT AT KANAGAWA.

In Admiralty.

Before Hiram S. Wilkinson, Esq., Acting Law Secretary of the Supreme Court.

The British schooner *Rupak*, Edward Benjamin Gall, Master. Cause of wages at the suite of, William Braithwaite, Ramote Surata, Joe Hooker, Keresy, Bidalla, Bomba, Peta Delima, Kang Ay, Ugotee, Ramotee, and Manuel de S. Nicolus.

Friday, December 29th.

Mr Kirkwood appeared as proctor for the plaintiffs; no appearance was entered on behalf of the ship.

Mr Kirkwood briefly recapitulated the facts of the case. He stated that the British schooner *Rupak* had left Singapore in January, 1874, on a trading voyage to the South Pacific Islands and back to Singapore; that after many adventures the ship arrived at Yokohama in September last, and that the master, finding it useless to continue the voyage, determined to abandon it, which he did so far as the seamen were concerned, as and from the 30th of November last; that in consequence the seamen had commenced these proceedings against the ship for their wages, which amounted to some $8,000, as the master was unable to pay them the same; that the ship was duly arrested on the 1st December last; that since that date the necessary advertisements had been inserted in the papers, and the terms of procedure duly complied with; and that it was for His Honor now to decide the justice of the claim made, and that if his decision should be in favour of the plaintiffs, then that he should decree the sale of the ship.

William Braithwaite mate, sworn:—I entered into service on board the *Rupak* December 10th, 1874. My wages were to be $60 per month. During the voyage, on the 1st August, 1875, they were increased to $75. We were near the Admiralty Group. There was no British Consul or merchant in that vicinity. We arrived in Yokohama on the 13th September last. I have been told by the captain that the voyage has terminated. None of my wages from the time I entered the ship till the 3 th November have been paid. It is my desire to return to Singapore where I shipped. I have always done my duty, and never to my knowledge have I done anything to forfeit my wages.

Edward Benjamin Gall, master of the *Rupak*, sworn, stated:—I am part owner of the *Rupak*, and I was appointed by the other part owners as master of that vessel. I engaged William Braithwaite at Singapore, December 10th, 1874, as chief mate at $60 per month. It is true that his wages were raised to $75 per month on the 1st August, 1875. On the 23rd day of June at the island of Matadore, I engaged Ramote, Keresy, Ramotee, and Ugotee, for the remainder of the voyage at $10 per month. On the 10th April at the island of Saliababoo, I engaged Joe Hooker for the remainder of the voyage, at $7 per month. On the 17th May, 1876, at that island I engaged Bomba and Bidalla as able seamen at $4 per month. On the 28th June, 1876 at the island Darkelang I engaged Surata, Kang Ay, and Peta Delima to serve as seamen at $4 per month. On the 13th September at Yokohama I engaged Manuel de S. Nicolus to serve as seaman at the rate of $10 per month. All those seamen respectively entered my service on the day that I engaged them. Since the arrival of the *Rupak* in Yokohama I have notified them that I have given up all idea of prosecuting the voyage further, and that their wages would be paid only up to the 30th November. All the sailors mentioned in the petition have duly earned the wages they claim. The agreement with the South Sea Islanders when I engaged them was to return them to their chief. I know of one captain who is fitting out a vessel to go down to those islands and he has promised to take them down. With the exception of the mate they all talk Pidjin language. I understand enough to order them about. All the statements in the petition are correct. I have read through it carefully.

James Jones Skinner, sworn, stated:—I am part owner of the *Rupak* and super-cargo. I recollect commencing this voyage from Singapore, and the engagement of the mate.

Mr Skinner then fully corroborated the statements of the preceding witness. He also said that he was in the habit of conveying the Captain's orders to the men as he knew their language better.

Mr Kirkwood asked if it were necessary to call the Islanders. The Court said it was unnecessary.

Ed. Benjamin Gall, master, recalled:—A copy of the amended petition was served me on board the *Rupak*. I recollect the fact of the ship being arrested on the 1st December last. The warrant was read over to me. I have made no objection. The warrant was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

duly affixed in order to the mast of the ship and is still there. I have seen the notice of sale in the newspapers since the 18th instant, every day.

Mr Kirkwood said that his three claims were, first—for wages due; second—for 10 days' wages for each seaman by way of liquidated damages by virtue of Sec. 187, Merchants Shipping Act, 17 and 18 Vic., Cap. 104; third—for expenses of passage and support back to port from whence shipped; and fourth—costs of suit.

The Court ordered that the vessel be put up to sale by public auction on Monday, the 8th January, 1877, and sold to the highest bidder, subject to the approval of the Court. Bidding to be reported to the Court on Tuesday the 9th January, 1877, when the Court shall approve the sale or order another.

To refer to Registrar to settle amount of wages due to each seaman; said wages to be paid from proceeds to H. M.'s Consul. A sufficient sum, to be settled by the Registrar, to be paid H. M.'s Consul for conveyance of the seamen back to the place of their engagement.

The fees of Court and plaintiffs' taxed costs to be first paid out of proceeds of sale.

IN THE JUDICIAL COURT OF KANAGAWA.

Before Assistant Kasuga, Esq., Vice-President.

Tuesday, December 28th, 1876.

DAVID WELSH *vs.* SANRIKU-SHOKÔ.

Judgment in this case was delivered to-day as follows:—

JUDGMENT

(Official Translation.)

This is a claim for $1,020 for breach of contract, and according to the statements of the parties and witnesses, the particulars of the case are as follows:—

Plaintiff states that about the middle of December, 1875, one Yakumai Umpatchi came to plaintiff's place and told him that a company was going to be established in Tokiô, and of which a branch was going to be opened in Yokohama, that he asked plaintiff whether he was desirous to be employed in said company, to which plaintiff answered that he was at their service. That after several interviews then plaintiff received on the 23rd of December, 1875, and in presence of the head of the company, Mori Motoharu, and his partners, Kawamura Kei-ichiro, Ban Mitsu-ichiro and Yakumai Umpatchi, his contract for employment. That he, plaintiff, after this did duly all he could in order to buy for the company, and on credit from some foreign merchants of Yokohama, a certain quantity of sugar and cloth, now that he, plaintiff, has handed to the company samples of this sugar and cloth. But as for this transaction some immovables were to be given as security, and this not existing in Yokohama, said transactions could not be brought to an arrangement. That plaintiff consequently then tried to organise the situation of the branch office but that none of his propositions would come to something; that he then asked Umpatchi of the reason of all this, on which he was informed that Mori Motoharu was arrested at the Saibansho of Tokiô for some affair, and that they, therefore, could not occupy themselves with any proposition that would be made, that notwithstanding, this affair was going on in this way for some time, still defendants never paid for any salary, nor did they procure any house for plaintiff conformably to the contract.

Consequently plaintiff claims now for salary and house-rent, from defendants the sum of 1,020 dollars.

Defendant, Mori Motoharu, states that in the 11th month of 8th year of Meiji, he entered as partner in the company called "Sanriku-shokô" on the proposition of a certain Kawamura Kei-ichiro (whose present whereabouts is unknown), and late Shimada Taiske. That they proposed to open their business in the buildings of the "Yusheisha," a company situated in Tokiô Kakigara-chô; that however its capital not being sufficient they could not commence business yet, consequently Kawamura Kei-ichiro and Ban Mitsu-ichiro were sent to Yokohama in order to raise money; that Mitsu-ichiro then returned to Tokiô and told Mori Motoharu, that by advice of one Yakumai Umpatchi, a friend of Kei-ichiro, a certain quantity of merchandise could be bought on credit from some foreign merchant. Motoharu himself came to Yokohama then on the 17th of 12th month of 8th year of Meiji, and having been told that they were going to be assisted by Welsh, a British subject, friend of Yakumai Umpatchi, he saw said Welsh, who told him that he could help them to arrange that transaction as much as for about some 7,000 *yen* of merchandise, on the condition that payment of a certain part be made as advance on the value; Motoharu accordingly requested Welsh to take the affair in hand. However, he, Motoharu, having been told that immovables were to be given as security in that transaction, and same not existing in Yokohama, knew that the above affair would perhaps not come to a completion. That all the parties arranged then to establish a branch of their company in Yokohama. That during the meantime plaintiff requested Motoharu to be employed in their company, and that the latter told plaintiff, to this effect that if the above mentioned affair of 7,000 *yen* worth of goods would be completed, and after the branch office had been opened, that he would be employed, and that it was verbally understood also with plaintiff that upon the completion of the said affair, he, plaintiff, conformably to his own request, would get 2½ per cent as commission on the said 7,000 *yen*. That from that time defendants and others were endeavouring to find a house for their branch office, and that Welsh also was busy arranging this before-said transaction. That one day Motoharu being told that the proposed transaction seemed almost to be completed, came to Yokohama and asked from the plaintiff the name and residence of the owner of such merchandise, because if he did not know this no one would supply capital for it; but plaintiff said that if Motoharu would advance him 50 *yen* that he would then tell him the name and address, but otherwise he would not. That plaintiff did not say anything notwithstanding the eager requests that were made to him. That with these interviews several days were wasted, and that in the meantime defendant was arrested by the Police of Kanagawa Ken, respecting some other affair for which he was to be interrogated by the Tokiô Saibansho; a thing which happened on the 30th of 12th month 18th year Meiji and owing to this no further suit was naturally given to the said proposed transaction. Under these circumstance he, defendant, denies the existence of a contract for employment, as alleged by plaintiff. With regard to the document, now produced by plaintiff, he, defendant, declares that this was now in Court for the first time he saw it, and that on the 18th of 12th month, 8th year Meiji, when he, Motoharu, came to this port he authorized Kei-ichiro and Umpatchi if the transaction in question should come to an arrangement, to make up and effect the contract for the said affair, and in order that they should be able to make such a contract up he, Motoharu, sent the necessary paper to the effect to Umpatchi through Mitsu-ichiro, and that this paper was blank, bearing nothing but the stamp of the company, but no writing was on it. That he now looking at this document recognizes same to be the handwriting of Umpatchi, and he supposes it has been said Umpatchi thus who wrote it; that he, Motoharu, declares having not only never given his consent for such a document to be made, but he never authorized even Umpatchi to write such a contract for employment out, and that he never heard of such having been handed to Welsh; that he can thus not admit to be kept responsible for any claim plaintiff may lodge on the grounds of such a document.

Umpatchi states that in the 9th month of 8th year Meiji, Kawamura Kei-ichiro came to his place and asked him whether he knew any good means to obtain capital for the institution of a proposed company, to be called "Sanriku-shokô;" he, Umpatchi, asked Kei-ichiro then how he would think of getting Welsh, a friend of his (Umpatchi), to help them to arrange the purchase of some goods from foreigners on credit; that Kei-ichiro agreed to that idea. That on the 16th of 12th month, 8th year Meiji, Kei-ichiro, Mori Motoharu, and Ban Mitsu-ichiro held a meeting at Umpatchi's place where Welsh was present, and after due consultation Welsh was requested to give his assistance for the purchase of certain merchandise on credit. That a few days later Motoharu sent some blank paper bearing the above said company's stamp, to him, Umpatchi, through Mitsu-ichiro; that Kei-ichiro told Umpatchi then as the contract for the proposed transaction should be completed, as Welsh was then to be employed at their company, a draught of contract for his employment was to be drawn up in order same to be ready beforehand; that he, Umpatchi, accordingly made the contract in question up himself, showed it to Kei-ichiro who corrected it, and that he, Umpatchi, wrote it then on the said blank paper which had been handed to him by Mitsu-ichiro. That then he, Umpatchi, showed the same also to Welsh on the 23rd of the 12th month 8th year Meiji; that he, Umpatchi, told Welsh that if the proposed affair should be brought to a settlement he should be engaged on the same terms as contained in that contract; and that he, Welsh, was therefore to assist them diligently in order to complete the above transaction. That in the afternoon of same day Welsh came again to Umpatchi's place and said that in order to try to arrange said transaction on behalf of the company Sanriku-shokô he would have to show the contract he had seen to the owners of the merchandise, that he otherwise could not get anyone to trust in the affair, and that he, Welsh, for his own sake, wanted it also, as without he would lose the chance of obtaining the completion of that affair,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and that whenever the same should be wanted by Umpatchi he, Welsh, would return it immediately. That pushed by this eager request of Welsh, Umpatchi found himself obliged to lend the document to Welsh, and on that day Umpatchi informed only Kawamura Kei-ichiro of having done so. That a few days afterwards Welsh, having declared that the transaction was almost completed, Motoharu, Kei-itchiro, Mitsu-itchiro, and Umpatchi all together went to Welsh's place, and asked for the name and residence of the owner of such merchandise: however, Welsh did not tell them, and it was Motoharu who was the most particularly anxious to know it. That in consequence of these arguments some days were wasted, and that in the meantime Motoharu was taken to the police, and that under these circumstances the transactions were entirely stopped. That he, Umpatchi, was not only under the impression that the so intended branch office of the company was even not established yet, and that though plaintiff was in possession of that document or engagement; this is of course of no value, and that he, Umpatchi, did even not remember himself of it till this day.

Ban Mitsuitchiro states that he seconds entirely the whole statement of Motoharu as regards that what happened or passed in Yokohama regarding the company, and that the blank paper in question bearing the company's stamp was handed over to Umpatchi by him by order of Motoharu, but that he, Ban, does not know whether and contract has been written on said paper, nor if anything of the kind has been given to Welsh.

Judgment is as follows:

1.—With regard to the claim of Welsh the only proof brought forward by him is a document bearing a stamp which says "Sanriku-shokô" and on this he grounds his claim of breach of contract and claims damages, but plaintiff advances no other satisfactory proof in support of this claim, nor does plaintiff produce any evidence as to the manner in which the document in question was delivered to him, and all the statements regarding this affair contradicting each other can thus not be taken as evidence. The Court consequently has to decide the case on following points.

1.—On the situation of the "Sanriku-shokô" company; 2nd, on the nature of the document in question; 3rd, whether said contract is in accordance with the regulations; 4th, whether same has ever been or is binding, and 5th, on the point on which the claim has been based.

2.—The "Sanriku-shoko" company is said by plaintiff as being his employer, however, the same firm not having obtained any governmental permission for doing business in accordance with the regulations, said company's existence cannot be acknowledged, nor can such company transact contracts with any other party.

3.—The contract for employment produced by plaintiff is merely a draft made up in Japanese and filled in a blank paper which bears a stamp meaning "Sanriku-shokô": this bears neither signature nor seal of the defendants, nor even the necessary signature of the plaintiff, and the accompanying English translation is different in the most important points from the Japanese, which can thus not be considered to be a correction; but even the Court considering for a moment same to be a correct one, still it does not bear said company's stamp nor signature of neither of the parties: said document has thus nothing that can make it to be considered by plaintiff as being a real and binding contract. Any contract made between parties in order to be binding must be signed by both parties in conformity with the general rules and customs. However, the above document having on it the stamp "Sanriku-shokô," which company had no power to effect such contracts yet, and the same being neither signed nor sealed by the parties, is considered and found to be document in contravention to the general rules.

4th.—In case of a Japanese employing a foreigner, each of the parties must make a copy of their contract in their own language first, and this after having been forwarded must receive the sanction of the department for foreign affairs, through the intermediary of the local authorities, otherwise such contract cannot become binding; and whereas the contract in question has never undergone any of these formalities, same can thus not be considered to be in conformity with regulations.

5th.—Defendants in order to raise a capital for their "Sanriku-shokô" company proposed and tried to buy some merchandise on credit in Yokohama, and tried also to open a branch office in the same port, but that the above proposition did not come to a completion. That it is clearly shown by defendant's and Umpatchi's statements that a verbal arrangement was made for Yakumai Umpatchi and plaintiff Welsh to become the managers of the branch office, in case the above said transaction should succeed.

Plaintiff states that he duly endeavoured to assist the company as much as he could in accordance with the contract. But as he declares that defendants were his employers how is it then that he refused to tell the name and address of the owner of the merchandise to them? That the Court, considering the affair well, finds that it is plainly shown that plaintiff was only acting as a broker in this affair, and was not yet to be considered as an employee of defendants, and that the contract in dispute has never yet been a true and binding one.

6.—Thus, whereas the existence of the Sanriku-shokô company has never been acknowledged yet, and consequently the contracts which such company may make being entirely in contravention with the general customs and regulations, same is found to be not actually binding, and notwithstanding it purports that plaintiff shall be employed, still, for the above reasons, same is considered to be null and of no value. It is consequently, therefore, decided that plaintiff has no right to claim anything from defendant.

This 28th day of 12 month, 9th year
Meiji (21st December 1876)
YOKOHAMA SAIBANSHO.

H. AHRENS & Co. *v.* YOGIYO CHOBEI AND YORODZYA SABURO.

In April last judgment was obtained by plaintiff's against defendants in a suit brought against them to force them to take delivery of a quantity of printed goods, and the Court allowed defendants till the 30th November to do so, at the same time ordering payment of ¾ per cent per month interest on the balance of the price of the goods. $750 bargain money had been paid at the time of the contract.

Plaintiffs now prayed for an execution of that judgment.

The principal party in the transaction has died since April and the goods have not been taken delivery of. Plaintiffs have, since November, been trying by friendly means to induce the purchasers to take delivery, and asked the Court to suspend judgment till January 10th, to allow them time to decide in the matter.

This arrangement was agreed to, and the Court adjourned till 10th proximo.

THE ARCTIC EXPEDITION.

(*The Times.*)

"The following is the narrative as given by the Rev. Mr. Hodgson, Chaplain of the Discovery. After referring to the ice incidents of the trip, already reported in despatches from Upernavik, he goes on to say:—

"'We next arrived at a settlement called Proven, where we took on board an Esquimaux dog driver, named Hans Christian, who had accompanied Dr. Kane, Dr. Hayes, and Captain Hall in their respective expeditions. In about a day afterwards we arrived at Upernavik, which is the most northerly Danish settlement of any importance, and from here we made our last communication by means of letters with home. We only remained here part of the day, and left in the evening. We then proceeded north through Baffin's Bay, and arrived at Cape York on the 25th July, where we saw a number of Highlander Esquimaux, who came in dog sledges over the floe to the sides of the ships. We got, as the ice, I should have mentioned, soon after leaving Cape York well, and met with occasional ice all along; but we were not seriously obstructed by it up to this. We waited here—at York—two or three hours; on leaving which one of our boats harpooned a whale, and we gave some skin and blubber to the Esquimaux, who devoured it most ravenously. We then proceeded northward, passed the Crimson Cliffs, and after a few days arrived at Port Foulke, the winter quarters of Dr. Kane, where we spent a day; and here one party of ours had a ramble on the John' glacier, during which they shot a bear, the only one during the whole time we were out. They also shot a lot of hares. The next morning we left Port Foulke, and crossed Smith's Sound. Being somewhat obstructed by the ice we succeeded in reaching Cape Isabella in two days. We had to steam, being unable to sail as there was no wind up there, and sometimes we had to wait until the ice opened out to give us a passage. We were detained here about three weeks by the ice, during which we found no Esquimaux remains on shore. We found no vestige of Dr. Hayes' travels, except at Port Foulke, where we found the remains of the expedition—a journal, a few books, and documents. The place where we found the Esquimaux remains is called Hagers Nest, and it is situated at the other side of Smith Sound. We remained about there for some time, and gradually worked up to the mouth of Hayes Sound, and reached Cape Frazer, where we were detained some few days by the ice. After that we crossed Kennedy Channel

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

by the east side, and entered Peterman Fiord. We left there after a few hours and crossed the Channel again, arriving in the commodious Harbour on the 27th of August. This was made the winter quarters of the Discovery. The Alert left us after a couple of days, and proceeded further northward for 50 miles, where her further progress was obstructed by heavy ice, and she wintered there in the west side of the Channel, Robeson Channel, as it is there called. I should have mentioned that the Alert, which preceded the Discovery, was the first to enter the commodious harbour where the Discovery wintered, and here they saw 84 musk oxen, 11 of which they succeeded in shooting. After the Discovery got into the harbour the crew commenced unloading her of boats, spars, &c., in order that they might prepare for winter. About a week afterwards the frost set in, the sea became frozen all round the ship, and they were able to leave the ship in about a week and take to the ice. We managed to shoot a number of musk oxen during the autumn, 30 or 40, I think, and a few more in the present year. The harbour was surrounded by hills of perhaps 2,000 feet high, and we gave it the name of Discovery Harbour. Close to the ship's anchorage there was a place which enabled us to land with ease. When the harbour was frozen all round sledging commenced, and they made short sledging expeditions, though not much in this way was done during the autumn by our ship, but the harbour was surveyed by the men and officers going out in dog sledges. As soon as the ice was strong enough to bear it, we commenced building round the ship houses of ice for magnetic observations. We first of all built a smithy, with gable ends, which was finished on the 11th of November, 1875. Our blacksmith and stoker were dressed in sealskins, and they found the walls of the smithy remarkably convenient for cooling their tools, and in the course of time the walls became penetrated in holes right through. We built an ice theatre, which we opened on the anniversary of the Princess of Wales's birthday, and called it Alexandra. It took about ten days work of the whole ship's company to build it. It was 60ft. long and 27ft. broad, the roof being made of sails, and snow and water being used for cements. It contained a green room, a drawing room, and stage raised one foot above the body of the theatre.

"'Mr. Miller, one of our engineers, drew out the designs for all the buildings. The theatre was opened with the farce, *My Turn Next*, acted by some of the officers, and some songs were subsequently sung from time to time during the winter. Plays were acted in this theatre by the officers and men alternately. On the 5th of November we had a bonfire on the ice and burned "Guy," and we let off rockets and blue lights. We lost the sun in the middle of October, and there were splendid effects in the sky about that time. The hills assumed a gold and purple tint from the time the sun disappeared until its return. The men had an extra glass of grog served out to them, a walk of a mile in length was made upon the ice by scraping away the snow, and this walk for exercise was kept clear during the winter. We also constructed a skating rink near the ship, as the surface was very rough, and we accomplished this by clearing away a large circle of snow, and then pouring water over the cleared space, which soon became frozen into much better ice. We always kept a hole in the ice for the purpose of getting a supply of water, and the ice over this was broken every half hour. From time to time this aperture closed up, and then it had to be sawn up or else blasted with powder, which used to shake the whole ship. The dogs were allowed to winter out on the floe, but they did not appear to mind the cold in the least. The changes of temperature were very rapid and remarkable. I have known it to change 60 deg. in a few hours. The coldest weather we experienced was in March, when one night the glass showed 70½ deg. below zero, which is the coldest temperature yet reported by an expedition. During this time we wore very thick underclothing of box cloth, very thick blue cloth trousers or seal skins. The first intimation we had of Christmas was hearing Sergeant Makins, the boatswain's mate, and a few others going round the ship at 4 a.m. singing hymns and Christmas carols. In the forenoon the captain and officers visited the men on the lower deck, and, after admiring the Christmas decorations, distributed presents given by friends in England. The names of those for whom the presents were intended had been already affixed to them. After the distribution of the presents cheers were given for the donors, for the captain, and for absent comrades in the Alert. The officers spent a happy Christmas day also. They had brought some sheep with them, which got frozen in the rigging, and were thus preserved. The festivities wound up with the singing of 'The Roast Beef of Old England.'

"'The winter passed gradually away, and the men had to draw fresh ice from the berg about half a mile distant on sledges for the purpose of supplying fresh water. It was perfectly dark during winter, except when we got the moon. It was dark from November until February. The sun returned on the last day of February, but we could not see it until the 4th of March, owing to the fog and mist which prevailed. Near the end of March a sledge with two men arrived from the Alert, and the glass was then standing at a minus of 40, about 70 deg. below freezing point, and they had a journey of about six days in a dog sledge. They all started a week before in still colder weather, but were compelled to return in three or four days, because Petersen, the Danish interpreter, was severely frost bitten. They returned to the Alert, and brought him back just alive, as he died soon after. Directly after they reached the Discovery, preparations began to be made for sledging. Two officers and three men set out in a dog sledge across Robeson Channel to Hall's Rest, the winter quarters of the Polaris, to report any stores that might be found there. Five days after this another party, consisting of eight men and one officer, went on an exploration of Lady Franklin Sound. They were supported by another sledge party of 11 men in charge of an officer, who carried provisions, &c. There were therefore 44 of the men from the Discovery employed in explorations, 24 being up north and 20 being engaged in Lady Franklin Sound. The latter party were accompanied by Captain Stephenson and five men with a dog sledge, but the Captain returned in a week. The support party returned in a fortnight with their sledge broken and damaged from the difficulty which they experienced in getting over the rugged ice. One of the men, a marine, had been attacked with frost bite and he had to be dragged. The explorers in Lady Franklin Sound continued their journey until they established the fact that the sound was not what it was supposed to be a strait, but a sound or bord, about 60 miles deep. At the end of this sound they observed three or four glaciers falling down the hills, which were estimated to be about 3,000ft. high. They also saw a herd of musk oxen, which on the approach of the expedition bolted wildly up the steep sides of the hill, throwing down great masses of loose stones. Not one of these animals could be shot, though at the time fresh food would have been desirable owing to scurvy having manifested itself. It was observable that at certain seasons these oxen were quite tame, while at other times they showed a contrary disposition. The Lady Franklin Sound party returned after about three or four weeks. It was now May, and the weather was beginning to get very much warmer; the ice was rapidly melting and the glass on one occasion registered 120 degrees in the sun. A few days after the return of the Lady Franklin Sound sledge party they set out to cross to Hall's Rest at Polaris Bay, taking with them a quantity of provisions, for the purpose of supporting the North Greenland party on their way south. They also carried with them a lifeboat in case the ice should break up in the channel. This was afterwards found to be a necessary precaution, for the ice had broken up, and they could not have crossed to Polaris Bay but for the boat. Having laid out a depot a few miles to the north, and left two officers and two men behind with a dog sledge, they proceeded to explore Peterman Fiord. They could not, however, proceed more than 28 miles up, having been stopped by very heavy glaciers and ice with large crevices. Being thus impeded, the party retraced their steps, calling at the depôt near Polaris Bay. Here they found Lieutenant Rawson's party after their return from a North Greenland exploration, having lost one man by scurvy. The others were also suffering from scurvy, with the exception of Lieutenant Rawson and a Marine. The man had died after reaching the place, which was about June 3, 1876. One of the two officers who had explored Peterman Fiord was Surgeon Coppinger, and he on joining Lieutenant Rawson treated the men who were lying sick. Hans, the Esquimaux, was detailed to shoot seals for the purpose of food. Seals make excellent food, as they are succulent and nutritious, and the soup prepared from them is especially good. Besides this they had molasses and rum, with preserved meats, a portion of the American stores that had been left there by the Polaris. Under this treatment, and the attention of Dr. Coppinger, the patients soon improved. Becoming anxious for the fate of the second party, under Lieutenant Beaumont, who had gone out on a North Greenland exploration, Lieutenant Rawson, accompanied by Dr. Coppinger and the Esquimaux, set out with a dog sledge in search, and after two days' journeying they came upon them in a most exhausted condition. Four men were laid up in a sledge, being utterly crippled with scurvy, and the remaining three men were almost exhausted from having to pull the entire burden of the sledge. The food supply was also nearly run out, and all, including the First Lieutenant, were more or less affected by scurvy. It was resolved to remain on the spot, and with that view tents

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

were erected and an encampment made on the ice, the sleeping requirements consisting of sleeping bags, with floor cloths stretched on the ice and a thick double sheet placed over them. The Esquimaux was sent to shoot seals, but he returned after a day without success. It was deemed expedient to convey two of the men who were the worst in the dog sledge to Hall's Rest, and this they succeeded in doing after a day's travelling. The day following, however, one of the men died. The other man was in a critical condition for a long time, but he ultimately recovered. The sledge then went back and fetched the other two men to Hall's Rest. An officer and two men, with a dog and a sledge, were despatched to proceed to the Discovery and report how matters stood. They crossed the ice with great difficulty, and several got immersed, the ice having broken up in several places. They reached the Discovery in three days, and the Captain immediately had a relief party fitted out with seven of the strongest men in the ship, and he himself accompanied the party, with medical comforts, &c. They started the following morning, carrying a boat and sledge in a four-wheeled car; and crossing the land about six miles to the point where it was necessary to take the sea, they finally reached their destination, and in the course of a few days returned with half of the sick men, leaving the others, whose condition rendered removal dangerous, to improve. In the beginning of August an officer arrived overland from the Alert, reporting the vessel was coming south and was then lying ten miles off, her further progress south having been obstructed by the ice. The officer stated that Captain Nares had resolved to return home, if possible, this year. Two days subsequently the Alert joined the Discovery. Lieutenant Beaumont had not now returned to the Discovery, and Captain Nares determined to take the Alert into the channel to look for him. He sent 20 or 30 men who were sick to the Discovery, and, borrowing some men from the latter, he proceeded. The Alert, however, was not able to proceed further than the entrance to the harbour, the progress being barred by the ice. Lieutenant Beaumont and party, however, soon after turned up. They had been drifting to the west and had great difficulty in fetching the ships. Both ships then prepared to return home. After being delayed a few days by the ice, the vessels got out of the harbour on Sunday, August 20. On their way south they were much obstructed for a few weeks—so much so, indeed, that they almost despaired of being able to work their way out until the following year. They had frequently to cut the ice, and even to blast it with gunpowder, in order to cut their way out, which they eventually did. On the 10th of September, when they arrived at Cape Isabella, they found the paper and casks left by the Pandora. They also received some letters, but the greater part of the letters, &c., had been left at Littleton Island, on the east side, and had been missed. The expedition got to Port Lively, in Disco, on the 25th of September, and the Governor then informed them of letters having been left at Littleton Island and of the departure of the Pandora five days previously. The Alert coaled with 30 tons, and after a short delay there both vessels again sailed on the 28th of September. They gave the Inspector of North Greenland a passage as far as Egeslesmirda, a small settlement of about 140 inhabitants. Here they remained a couple of days, during which the Discovery took in a supply of coal. Here the monotony of the voyage was broken; the men were allowed ashore, and there was a dance with the natives in the evening. They left this in a few days and proceeded southward, meeting icebergs on the way, and experiencing some bad weather. They picked up the Pandora in about a fortnight, and all parted company on the 10th of October. A week ago they encountered severe weather in the Atlantic, and had one of their boats stove in. In the Spring, while the vessel was in winter waters, some shooting parties were sent out from the Discovery; the lakes inland were visited, and large quantities of Brent geese were met; musk ox were shot on the hills, and hare were taken in abundance. In some of the lakes they found salmon and trout, and they obtained 50 specimens of plants. Vegetation was scanty, but on the slopes which were watered by the mountain snow from the heights red and green moss was to be found. Dwarf willows were seen, and saxifrage grass was scanty and dead looking.

"Lieutenant Beaumont, First Lieutenant of the Discovery, states that the travelling was during the Spring, no one could live during the Winter. The Aurora Borealis was not distinct in that latitude, the latitude being too high. Whenever they saw it it came from the south, and can be seen more distinctly in England. One of the great difficulties they experienced in travelling on land was in some places were hard and in others soft. The obstacles that prevented them pursuing their inquiries by land where the mountains, which rose to the height of 4,000 and 5,000 feet. The expedition that took in the northern coast of North America followed the coast line as much as possible. After they left latitude 81 deg. 7 min. they had to travel on the sea were the ice was at least 160ft. thick. They found ridges of ice, and the sleighing party had to hew their way through them with pickaxes. In one place they found ridges of seven miles, and they had to cut their way through. It was known before the starting of the expedition that with the difficulties before them the Pole could not be reached; but the sleighing party had intended to reach the place, went straight at their work, and were only stopped by the immense barrier of ice. The exploration party from the Discovery explored the north coast of Greenland, and a party from the Alert explored the northern part of Grant's Land. The configuration of the mountains was not more difficult than that of the Swiss mountains; but there was this insurmontable obstacle, that they were covered with snow from the base to the summit. They vary 4,000 to 5,000 feet high. The present expedition went 100 miles higher than Sir John Franklin's expedition. The whole of the ship's company passed in the expedition except a few who had to look after the ship. A short time before the close of their winter quarters they discovered a vein of coal nearly 25ft. thick. They did not, however, avail themselves of it during the winter. The snow covered the coal which would then have proved valuable. They saw no evidence of volcanic errruptions. Lieutenant Beaumont's party had been absent from the ship 131 days, and reached 82 deg. 20 min. N. lat., 52 deg. W. long. The country through which they passed was cut up into fiords, and land existed to the north-east, probably reaching 83 deg. Lieutenant Aldrich's party went as far as lat. 83 deg. 7 min., long. 30, but west of that traced it and as far as 84 deg. 56 min.

"'The Alert, after parting with the Discovery in lat. 81 deg. 44min., steamed due north, as it was determined that she should get as near the Pole as possible. The water was fairly open at the commencement, but the ice began to gather more thickly each day, and in the beginning of September the Alert entered a deep indentation on the coast, lat. 82deg. 27min., which was the highest latitude she could reach. An ocean of ice presented itself before them. This nook was called by them Floeberg Beach. Here during the remaining portion of the autumn and in early winter huge floes drifted along by the currents came together, and packed in the water outside the Alert, and formed for her a very effectual protection, though a remarkably gripping one. Here the vessel was bound up for seven months, and for nearly 50 of these the light was never seen. It was a terrible time for those on board. The cold was the most intense ever registered, and was as much as 104 deg. below freezing point life outside the ship could not be borne, especially if the slightest wind was blowing. During this time the deck was banked up with 16 inches of snow, in order to retain the heat, and around the sides of the ship it was piled to the depth of some feet every fortnight. The welcome light of the moon came to cheer the ice-bound voyagers, with some evidence that their breath still existed, and its light reflected by the mile of glittering ice and snow was of dazzling brilliancy. Inwards from the Alert were bare mountains, which, from their upwards, looked like cones of snow; and outwards the ocean ice-ridges rose in such long and interminable lines that the ship seemed for ever fixed in those dreadful solitudes. During this terrible period the men on board were never allowed to heart. Such a failing they never evinced, for men could be borne up with braver hearts against dangers than they. The admirable preparations which had been made on board enabled them to pass their time as agreeably as mortals could under the circumstances. They could engage in bouts at the noble art of self-defence. All possible games that could be played in close quarters were available for them. They also had a printing press, in which to print their journals, and theatricals once a week. Yesterday, when visitors were looking at the from the Arctic regions on the vessel's deck, the most reminiscences of the voyage they could discover were the ing gloves, and some reams of tin-foil paper, the only supply that was needed to make the breast plates for the who appeared in the exciting dramas which were board. Before the cold of the weather became so the officers and men were kept confined to the ship tions were made on foot over the ice in her neighbourhood large floe, 75ft. high, settled down a short distance and the men set themselves, while the weather the task of cutting a stairway to its summit, which succeeded in doing. The top of Look-out Floe, was generally the termination of those excursions, occasion they carried on a performance on it which

of bergs flare as they never had done before. It was when, on the 6th of November, the crew of the Alert, with all due ceemony, burnt Guy Fawkes's effigy on its top. At the same moment, and without any preconcert, the crew of the Discovery were carrying out the same old practice on a smaller floe, in a degree of latitude to the south. Whenever the weather permitted of existence outside the ship, there was some skating to be had on the smooth floes, but the great excitement was shooting, and the principal quarry was the musk ox, an animal never before known to inhabit such latitudes. During the winter months about 28 of those animals were shot, and in the spring about ten more, and their skins have been brought home. The hoofs are small and nicely formed, and the hair which clothes the animal is long and of a dark brown colour. The ermine an animal never before known to live so far north—was also killed. The Greenland shore, off which the ships lay, was infested with owls, whose nests the sailors were very quick in discovering. When the spring set in they laid snares for the old ones, and they determined to carry home a large consignment of owlets; but when the young ones were all but fully grown, wolves descended on them in nearly every instance and ate them. This was very strange, as there were not more than a couple of wolves seen in the neighbourhood of the ship. The robbing of the nests that were left untouched was in itself a work of great danger, because the old owls descended on the men and darted at their eyes, and it required no ordinary wariness to keep them off. The owls were treated with the greatest care, and they lived until the Alert was caught in the fearful storm she encountered in her passage home, during which they died."

Our Cork Correspondent telegraphed on Monday:—

"At half past 1 o'clock to day (Monday) the Alert and Discovery left the harbour for Portsmouth. The former had taken in her supply of coal from the Hawlbowline Stores, and both ships were visited during the morning by large numbers from Queenstown, who traded with the sailors for all kinds of fruits and vegetables that were in season. Many ladies and gentlemen also went on board, and were led round the ships by the officers, who showed great anxiety to give them all such general information as could be conveyed in general conversation. Nothing on board the ships attracted more attention than the huge saws which had been used in cutting through the ice and the long crooks which were brought into requisition when the ascent of any precipitous floes had to be made. The appearance of such great weapons gave some idea of how desperate the work was which they failed to be of use in accomplishing. No one apart from those who went through the terrible hardships of the journey can appreciate what that labour was. When Commander Markham and Lieutenant Parr started on the 3rd of April from Cape Columbia, in Grant's Land, to reach the Pole, they had wall after wall of ice to cut through. The party of 15 men, who had then been a long time already from their ship, had two sledges and two boats and provisions for 40 days. The men had to drag the boats and sledges up the side of the floes until they could with safety go no higher, and then hew passages 18ft. and 20ft deep to enable them to pass through. When this was accomplished the boats and sledges had to be dragged over, and this was a work of great labour. They never had more than a clear space of a mile before the floe bergs piled one on the other (called hummocks) made a barrier again, which had to be cut through into the pack. The average work represented one mile of progression for 10 miles of travel, and this terrible wearing labour, repeated day after day for 20 days, wore out the men, who were already very ill from scurvy and exposure. Be it remembered that in this terrible march the men had to work ten hours a day, and to carry from point to point a great amount of baggage. Their work began at 6 each morning, and they rested for a while in the middle of the day. They carried their tents with them, and their sleeping arrangements appear to have been perfect. They were covered each night by the tents, and a waterproof sheet was laid on the snow, upon which their beds were then placed. The men, covered in heavy winter clothing, then rolled themselves up in their bags so tightly that the cold air was excluded."

TRAVELLERS, Miss ONARIES & others, may employ their leisure time *pleasantly & profitably*, by collecting *rare butterflies*. Forward (freight unpaid,) folded up separately in paper, in cigar boxes. Best prices remitted for perfect specimens. Collecting apparatus sent *free* to those who furnish reference to D. G. RUTHERFORD, (*Horniman's Museum.*) Forest Hill, LONDON. [ADVT.]

W.B.M.—We cannot withhold the solutions of last week's problems, as many of our chess-playing readers no doubt expect them in this issue, but would suggest that you should refrain from looking at them until you have attempted the problems yourself—admitting freely meanwhile the strength of the temptation to look at them.

Shipping Intelligence.

ARRIVALS.

Dec. 24, *Alaska*, American steamer, Howard, 4,011, from Hongkong, Mails and General, to P. M. S. S. Co.

Dec. 26. *City of Tokio*, American steamer, Maury, 5,072, from San Francisco, Dec. 1 Mails and General, to P. M. S. S. Co

Dec. 28, *Nagoya Maru*, Japanese steamer, Connor, 2,917, from Shanghai and ports. Dec. 20, Mails and General, to M. B. Co.

Dec. 28, *Sunda*, British steamer, Reeves, 1,704, from Hongkong. Dec. 21, Mails and General, to P. & O. Co.

Dec. 29, *La Clocheterie*, French corvette, Captain Brennier, from China, viâ Nagasaki.

DEPARTURES.

Dec. 27, *City of Tokio*, American steamer, Maury, 5,072, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

Dec. 27, *Alaska*, American steamer, Howard, 4,011, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

Dec. 27, *Bombay*, British steamer, Smith, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.

Dec. 27, *Nevada*, American steamer, Williams 2,145, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Dec. 29, *Genkai Maru*, Japanese steamer, Burdiss, 1,917, for Kobe, Mails and General, despatched by M. B. Co.

Dec. 29, *Sumida Maru*, Japanese steamer, Gorlach, 890, for Hakodate, Mails and General, despatched by M. B. Co.

PASSENGERS.

Per Steam-ship *Alaska* from Hongkong:—Captain C. C. Williams and wife, Messrs. Ah Wong, J. Murphy and Robert Brown; and 6 Chinese in the steerage.

Per Steam-ship *City of Tokio* from San Francisco:—Prince Leichtenstein, Prince Monternerro, Profl. D. Murray and Mrs. Murray, Miss J. Veeder, Miss Aug. Veeder, Dr. Dressen, General Sigo, Messrs. Richd. Agnew, J. W. Smith, T. F. Burr, J. Kenzo, A. Tcheiga, S. Motoaki, F. Knoblauch, Sekisawa, Okekio, S. Masashu, S. Katsuwari, J. Taruetaki J. Hingston and J. M'Pherson. For Hongkong: Mrs. Henderson and child, Messrs. J. M. Forbes and J. J. Howard; and 5 Europeans, and 671 Chinese in the steerage.

Per Steam-ship *Alaska* for San Francisco:—Mr. and Mrs. Van Hovenberg, Lieut. L. C. Logan, U.S.N., Messrs. D. W. ap Jones, S. Oku, John W. Jordan, G. L. Montgomery, C. B. Bernard, Chas. McFarland, Okadu, Hosegawa, Geo. White, Bernard Carey, Chas. Sline, Ed. Norton, Ths. Cook, S. W. Hartley, John Ashton, P. Brandt, M. S. Cooper, J. W. Milstead, J. H. Thomdike, 2 in the steerage.

Per steam-ship *Bombay* for Hongkong:—Mr. Escomb, Mr. Cruise; and 16 in the steerage.

Per Steam-ship *City of Tokio* for Hongkong:—Mrs. Henderson, Messrs. J. M. Forbes, J. J. Howard; and 671 Chinese in the steerage.

Per Steam-ship *Nagoya Maru* from Shanghai and ports:—His Excellency Iwakura, Paymaster Burnside, U.S.N., Messrs. Geo. Spooner, D. R. M'Grath, John Roche, Gustav Oelke, Flord, H. Greey, and 19 Japanese in the cabin; and 2 Europeans, 2 Chinese and 166 Japanese in the steerage.

Per Steam-ship *Sunda* from Hongkong:—Mr. Geo. Allen, and 1 native on deck.

Per Steam ship *Nevada* for Shanghai and ports:—Mr. and Mrs. St. George, Captain Marvin, Captain Burr, Messrs. W. H. Livingston, G. Hamilton, Howard, J. W. Forbes, Von Siebold, Van der Osten, Diack, Sharpe, Huggan, Bunghman, Gullifer, C. Joseph, Gorman, and 23 Japanese in the Cabin.

CARGO.

Per Steam ship *Bombay* for Hongkong.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—In consequence of the usual holidays at the end of the year only a small business has been done, but the prices offered by natives are more regular, and in some instances even an advance may be quoted. This latter remark chiefly refers to *Yarns*, for which there is a moderate demand at prices about one dollar above the lowest quotations. *Shirtings* continue depressed, and for other articles no interest has been shown.

Grey Shirtings:—						White Shirtings:—			
7 lbs	38½ yds	29 in.	per pce	$1 50 to $1 80		60 to 64 reed 40 yds 35 in.	per pce		2.20 to 2 40
8 lbs.	38½ yds	44 in.	,,	1 90 to 2 40		Turkey Reds 24 yds 30 in. 2-3 lbs.	per lb.		0 72½ to 0 90
8 lbs. 4 to 8½ lbs	38½ ,,	39 in.	,,	1 40 to 2 40		Black Velvets			7 25 to 8 50
9 lbs	38½ ,,	44 in.	,,	2 25 to 2 75		English Drabs 15 lbs. 40 yds, 30 in.			2 60 to 2 70
T. Cloth 7 lbs.	24 ,,	32 in.	,,	1 40 to 1 60		Taffachelas 12 yds, 43 in.			2.00 to 2 25
,, 6¾ s	24 ,,	32 in.	,,	1 10 to 1 25					

Yarns.—

do in basket	,,	$4.10	Swatow Brown	,,	$3.40
China No. 1 Ping-fah	,,	$7 75	Daitong	,,	$3.80
,, No. 2 Ching-pak	,,	$7 15	Japan Rice		$2.30 to $2.35
,, No. 3 Ke-pak	,,	$6 50	Kerosene Oil		$4 50

Kerosene Oil remains without any alteration for the same reason.

EXPORTS.

Silk.—Transactions as usual during the last week of the year have been limited, and we are unable to report any change in prices. Since the 22nd instant arrivals are 210 bales and deliveries about 300 piculs, one half of which consists of Oshius. In most cases the goods have yet to be inspected, and settlements are postponed till the reopening of the Banks.

	30th Dec. 1876.	30th Dec. 1875.
Filature Nos	$900 to $1,000	$450 to $600
Hanks—Best No. 1 and 2	$840 to $860	$430 to $450
,, Good No. 2	$800 to $820	$410 to $420

,, Medium to Good	$720 to $750	$480 to $490
Hamatshi—No. 1 & 2	$580 to $620	$430 to $450
,, No. 3 & 4	$520 to $550	$400 to $420
Kakeda—First	$900 to $930	$550 to $570
,, Medium to Good	$830 to $860	$500 to $540
Exchange at 6 months' sight	4 2½ 5 35	4/1½ 5.22
Total shipments since 1st July	18,159 bales	9,510 bales
Stock	2,200 ,,	1,200 ,,

Tea.—Rather more business has been done during the past week than might have been expected, settlements amounting to 1,600 piculs, principally composed of the lower grades. Prices remain as last quoted, the native holders showing some amount of confidence and supplies being extremely limited. Stocks in Yokohama are much reduced, and it seems now pretty certain that we have received the bulk of this season crop, and that further arrivals will be small and unimportant.

Common	$10 00 to 12 00	Fine	Nominal.
Good Common	13.00 to 15 00	Finest	
Medium	16 00 to 18 00	Choice	
Good Medium	19.00 to 22.00		

EXCHANGE AND BULLION.

Exchange.—The Banks closed for the usual holidays on Thursday, so that we only give below the rates which were quoted on Wednesday last.

Rates close as follows:—

MISCELLANEOUS.

NOTICE.

ON MONDAY and TUESDAY, (the 1st and 2nd January, 1877) there will be no issue of the "JAPAN MAIL DAILY ADVERTISER."

Yokohama, December 29, 1876.

WILL BE PUBLISHED EARLY IN JANUARY.

PRICE 2 DOLLARS.

The Ladies' Directory,

FOR YOKOHAMA AND TOKIO.

INDEPENDENTLY of the general Directory which forms the indispensable requisite of the Merchant's office, the want has long been felt of one more exclusively devoted to social purposes, and containing such useful local information as the demands of daily life involve. The Ladies' Directory, now about to be published, claims to supply that want.

"JAPAN MAIL" OFFICE.

Yokohama, December 21, 1876.

LANCASHIRE FIRE INSURANCE COMPANY.

Yedo Agency.

F. C. HAYES,
Sub-Agent,
8, Owari cho, Nichome.

Yokohama, December 1, 1876. 2ms.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us. until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World
